		COLORED PLATES ISSUED WITH VOLUME V:	
		Oriental Poppy, Mrs. Perry; Hybrid Tea Rose Dean Hole; Allington Pippin; Rhododendron Pink Pearl.	

THE INDEX WHICH APPEARS ON THESE PAGES HAS A VALUE BEYOND ITS ORDINARY PURPOSE AS A GUIDE TO THE CONTENTS OF VOLUME 5. IT IS, WE THINK, A STRONG PRESENTATION OF THE VALUE WHICH HORTICULTURE IS RETURNING TO ITS SUBSCRIBERS. CONSIDER THAT THE ABOVE LIST OF SUBJECTS COVERS ONLY SIX MONTHS—HALF A YEAR—COSTING THE SUBSCRIBER FIFTY CENTS. CAN YOU DO BETTER THAN TELL YOUR FRIENDS ABOUT IT?

SPLENDID EASTER AZALEAS

Of extraordinary size and perfect form. The number is not large and any one wishing to secure a few for Easter delivery **should do so now.** Sizes, varieties and prices on application. We are also growing our customary

HIGH-CLASS LINE OF ACACIA, HYDRANGEAS, LILIES, ROSES, ETC.

A fine stock of Asparagus in jardiniere pans ready now.

W. W. EDGAR CO., - Waverley, Mass.

PLANT NOW FOR EASTER

SPIREA FOR EASTER FORCING

If you have not all the spirea that you want for Easter and Decoration Day, we still have a few thousand fine clumps left, which we offer as long as unsold as follows:—

Gladstone. The best of all the spireas. Free bloomer, fine large spikes. Extra. Selected clumps, \$12.00 per 100.
Astilboides floribunda. \$5.00 per 100; case of 300 clumps for \$12.00.
Compacta multiflora. Strong clumps, \$6.00 per 100.
Japanica. Strong clumps, \$5.00 per 100

GLADIOLUS COLVILLI

Alba "The Bride." White. 75c. per 100, \$6.00 per 1000.
Rubra. Red. 60c. per 100, \$5.00 per 1000.

MINIATURE HYACINTHS, or DUTCH ROMANS.

We still have a few thousand of these left, which we can supply in a fine assortment of named varieties. \$2.00 per 100, \$16.00 for 1000.
 These can be potted up, if done at once, and will make nice Easter stock.

NARCISSUS

Double Von Sion. We have a few thousand extra quality bulbs to offer. \$.50 per 100, \$12.00 per 1000.

Priniceps. A few thousand extra sized bulbs. 75c. per 100, \$6.50 per 1000.

Single Von Sion. \$1.25 per 100, \$10.00 per 1000

TULIPS

Cottage Maid. The best pink for late forcing. \$1.00 per 100, \$8.00 per 1000

Keizerskroon (Grand Duc). The favorite forcing variety. \$1.75 per 100, \$15.00 per 1000.

LILY OF THE VALLEY

Pierson's Premier. Best selected Berlin for earliest forcing. \$1.50 per 100, \$13.00 per 1000. Case of 2000 for \$24.00.

If you can use any of the stock offered, let us have your order quickly.

F. R. PIERSON CO., - - - Tarrytown-on-Hudson, New York

MABELLE NEW PINK CARNATION — FOR 1907 —

COLOR—A peculiar shade of lovely pink, with a faint yellowish cast; several shades lighter than the Lawson. Unlike most Pinks, the brightest sun does not injure the color. **SIZE**—3 to 4 inches in diameter when established. **ODOR**—Pleasing, but not strong. **STEMS**—Invariably strong, but always graceful, ranging from 12 to 30 inches during the season. **HABIT, etc.**—A very quick, active grower, making specimen plants in a short time, even from late cuttings. On account of its rapid growth, requires supporting very soon after benching. Gets away rapidly, blooms early and gives long stems right from the start. **PRODUCTIVENESS**—Prodigious is the best word we know of to use here. It is the most incessant bloomer early and late, we have ever grown. **Stock Limited. Delivery January 5th to 10th and later.**

Price \$12.00 per 100, \$100.00 per 1000

The H. WEBER & SONS CO., Oakland, Md.

CARNATIONS.

Red Chief—Bright scarlet—early and very productive. \$12.00 per 100; \$100.00 per 1000. Average 3 in. flowers. A leader in every respect.

Comet Tomato

Those who force tomatoes should give "Comet" a trial. This variety has been the talk of gardeners around Boston the past season. Those who have seen it growing declare there's nothing to compare with it.

Seed, \$5.00 per oz. Trade packet \$1.00.

WILLIAM SIM, Cliftondale, Mass.

The Cycles of the Amaryllis

A. psittacina (the parrot flower) is one of the most interesting of flowers. The flowers in their three parts open state really look like a parrot. They are of the brightest scarlet and deepest green. It is unique and beautiful; why do we not see it oftener? Brazil, 1677.

A. pulverulenta; flowers four in number, orange red, with rather stiff petals, sharp pointed; scape 2 ft. long, dark purple at the bottom; leaves deep green, densely covered with purple bloom, base of each leaf mottled with purple. Brazil, 1819.

A. reticulatum; one of the oldest and one of the most beautiful flowers, delicate soft pink and white, 3 to 4 inches in diameter, marked with darker color, so as to appear covered with delicate net work; scape 18 to 24 inches high, carrying five or more flowers; leaves, dark green with a pure ivory white midrib. Brazil, 1667. Seems as if this and *A. Leopoldi* would give some magnificent hybrids.

A. solandriflora, most elegant and beautiful in shape; flowers drooping, very large; tube very long, slender, pale green; limbs somewhat spreading; segments oblong, sharply pointed; colors: sulphury cream, tinged with trailing arbutus pink; the backs of the flowers have their own green tinge; three to five flowers on scapes 2 ft. long; leaves rather narrow, strap shaped, keeled at base and blunt at apex, 15 inches long. Guiana, 1839. Beautiful varieties of this are *rubro striata*, flowers marked red and white, and *purpurescens* with distinct rosy purple and white flowers.

A. vittata is a species for which we should be thankful because of the many beautiful varieties that have been raised from it. Flowers of the true species, which we rarely see now, are clear white with two distinct red stripes on each segment, the segments being nearly equal in size. On strong plants the strong 2-ft. scapes carry as many as six flowers; the leaves are rather erect, nicely curved, strong and leathery of a rich deep green. Cape of Good Hope, 1788.

There are several other species that are not as distinct as the above or they differ but slightly. If a complete collection is desired they are necessary, otherwise they may be omitted. Besides these there are some old hybrids some of which are 100 or more years old, which we cannot let pass without notice.

A. Johnsoni. The most widely distributed of all amaryllises. One of the first hybrids between *A. Reginae* and *vittata*. Flowers crimson and white; very free flowering.

A. Ackermanni. Hybrid of *aulica* and *Johnsoni*. Flowers, deepest crimson, of large size and easily managed. The parent of many fine kinds.

John Thorpe

(To be continued.)

British Horticulture

THE WINTER FLOWERING CARNATION SHOW

The newly established Winter Flowering Carnation Society made an excellent start with their first show, which was recently held at the Royal Botanic Gardens in London. The leading trade growers were well represented, the only weak section being that of the amateurs, but it is hoped to remedy this defect another year. Two novelties were certificated. One was *Britannia*, a bright red tint, raised by A. Smith, and recently illustrated in *HORTICULTURE*. This is a vigorous grower, likely to be very popular for market work. The other novelty was *Mrs. H. Burnett*, of a delicate salmon pink tint, raised by H. Burnett. The prize for best white was taken by A. F. Dutton with some splendid specimens of *Improved White Lawson*. The best crimson was President, shown by Messrs. Bell & Sheldon, whilst Haywood Mathias took the premier honor with *Enchantress* in the class for a blush or light pink variety. A very handsome group was staged by Hugh Low & Co., amongst the prominent varieties being *Mikado*, *Oriflamme*, *Rose Enchantress*, *Marmion*, *Mauvina*, the latter being of a bright magenta tint. The leading American varieties were well represented on most of the stands.

MARKET CHRYSANTHEMUMS

The National Chrysanthemum Society held their annual show of market varieties in London on December 12th, when an interesting collection came under the notice of the judges. Novelties were not very numerous for the English market grower pins his faith to the leading standard novelties which are in favor with the public. In the novelty class, the first prize fell to W. Wells & Co. for some excellent specimens of *Snowflake*, a white sport of *Mdme. H. Douilett*. Phillip Ladds & Co. obtained the silver bowl offered to the winner of the greatest number of prizes. In the color classes the prizes were secured by the following: Yellow, *Nagoya*; bronze, *Mdlle. G. Rivoli*; crimson, *Exmouth Crimson*; pink, *Mdlle. Laurence Zede*. Great interest was taken in the competition for the best packed box of chrysanthemums for market. The competitors showed considerable skill. The chief prize winner had boxes of *Winter Cheer* and *Mdme. Theresa Panckoucke*. The whole exhibition was an object lesson of the high cultural skill which has been reached by the leading market growers. The past season, by the way, has been a record one for "mums." The flowers have been more plentiful than profitable.

W. H. Adsett.

New Year Wisdom

Do you wish to extend your business? Undoubtedly. Then, presuming that you have desirable goods to offer, the best way to increase business is to reach out for new customers. *HORTICULTURE* is the best medium in existence for this purpose, because by its different plan of action and tactics it not only interests old patrons in a new way but has developed a new clientage indifferent to hitherto existing mediums. Your advertising in *HORTICULTURE* will catch new eyes and will give you a wider field than ever before. Begin the New Year with wisdom.

SUPPLEMENT WITH THIS ISSUE

HORTICULTURE extends to its growing family of readers best wishes for a happy and prosperous New Year and expresses the hope that the serenity and brightness that made January 1, 1907, the most beautiful New Year's Day we have ever experienced be typical of the sunny prosperity to come during the year to every one who reads these lines. We further hope that HORTI-

CULTURE may win a liberal measure of recognition as a contributing factor in whatever good the year holds in store for the craft.

The Toronto carnation meeting

Who will go to Toronto? The carnation meeting is scheduled for January 23 and there is every reason to expect that, in all respects, the Toronto affair will equal in interest and profit the very best of its predecessors. Reduced railroad transportation has been accorded to those attending and liberal concessions have been made for exhibitors taking material across the border. Let every craftsman "this side of the line" who can possibly do so get ready to pack up and join in this visit to the land of snow and help to show by their numbers and enthusiasm that in horticulture, at least, there is no such thing as a "dividing line." We know that a big-hearted welcome awaits the visitors. Who can afford to stay away?

Training young gardeners for landscape work

The landscape garden study class of the Gardeners' and Florists' Club of Boston has proven a very popular move, particularly with the younger gardeners, who have taken to the lessons with commendable avidity. The fundamentals of geometry are the topics now under consideration. A talk by Prof. Chas. S. Sargent is on the program for some evening in the near future. The class comprises sixty students and meets twice a week. That some of these young men will yet make their mark in landscape work is a reasonable proposition for some of them are already well advanced in plant knowledge, a fundamental training in which is the best foundation for the successful landscape artist.

A British welcome to the American carnation

We like to read of the enthusiasm spreading all through Great Britain over the so-called "winter-flowering carnation." The wave of popularity accorded this, our own type of the "Divine Flower" over there, is all the more gratifying because of the prejudice which its introduction developed—an opposition so strong that it was refused admission to the schedules of the Carnation Society and the only alternative left for its indomitable friends was to organize a special society devoted to its interests. The welcome extended by our English friends to innovations from Yankee-land is not usually remarkable for eager ardor and the promoters of the new society have every reason to be proud of their signal success. It is stated that their first exhibition which took place recently was so well received that it is proposed to hold another in March, and so appreciative are the flower fanciers of the opportunity to have such attractive blooms in the dull winter days that the amateur growers actually begrudge sending their flowers to the exhibition.

ROSE HOUSE WISDOM.

Christmas has again gone. Many lessons have been learned, and many more might have been. The rose "salter" was again in evidence, but in limited number, as business in that line has not for some years been very remunerative, neither was it any better this year, as some of them had their bewhiskered roses left on their hands and were compelled to unload at a loss. In my previous notes I said it was a bad thing for the wholesaler to have a quantity of aged stuff suddenly dumped in for him to try to sell. It is a pernicious habit and usually disastrous but this doesn't prevent its being tried again another year. The man who does this is a disgrace to the specialty he represents, and I think it makes him a criminal in the eyes of his fellows. No wonder some of the public have an aversion to roses; they find roses do not keep, and the result is they buy some other flowers. This is a direct loss to the rosegrower. Some years ago the editor of a magazine advised his readers to spend their money in candy or any other thing except flowers at Christmas. Probably he had good reason for those remarks.

Another thing the wholesaler has to contend with is the propensity of some dealers at holiday time to solicit stock direct from growers, offering to pay a higher rate or throwing out the bait that he (the grower) will save commission thereby. I always have turned such offers down with a flat refusal and advised the applicant to go to the wholesale dealer. It is rather amusing to hear some growers rail at the wholesaler when trade is good and then when there is a glut to see the change in mein. The golden rule is a good thing to keep in memory at all times. The world would be better for it, the greed of some would be lessened and a better spirit would prevail.

Another year has come to a close, and we look forward just as eagerly to the New Year as we have done to those in the past. Death has removed many from our profession but their places have been again filled, showing that the world moves along and that our leaving it cannot stop its progress. Many obstacles have been thrown in our way in the past, and the future perhaps holds just as hard or harder than those we have conquered, but Hope, that great solace of mankind, leads us on unmindful of the trials which we have passed through. Much progress has been made in our calling. Here in Boston we note the culmination of many years persistent upward work from a small beginning, in the new headquarters of Welch Bros. These gentlemen have shown wisdom and courage, and have fairly won their exalted place in the flower trade.

I was much interested in what Mr. Asmus wrote in your issue of December 8th, on the "sportsman spirit" at the exhibition. The writer is on a pretty good track. I may later touch on that subject, as I have done before. There are various phases of sports, sporting and sportsmen. I attended

the Boston Club sports last summer, and enjoyed every minute of it. Some of us Scotchmen entered the races but it was mostly Englishmen who won. History again repeated itself, for the English always beat the Scotch at running. And some disgruntled Scotchmen stayed at home that day for reasons unknown to themselves. "Unsportsmanlike," just the same as we see at the flower shows amongst all races of people.

I am sure HORTICULTURE joins me in wishing the readers A Happy New Year.
R. T. MCGORUM.

WHOLESOME CHESTNUTS.

"A guid new year tae ane an' a' and mony may ye see." Look back to the year that has passed, not with regret even though failures were many and successes few, but rather to acquire from recollections of those same failures inspiration for renewed endeavor for many future successes and few failures.

Be not envious of what you may call the luck of your neighbor because if conditions within you and surrounding you had been of as hospitable a nature as those within and surrounding him luck would have given you an equal share of its companionship. Every man of our craft as well as of every other craft can if he examines himself critically find some void or incapacity entirely responsible for what fate or ill fortune or luck or all three are blamed for. It matters not whether successful or unsuccessful, be up and doing, bright and early in the new year and "work while it is yet day, for night cometh when no man can work." Inactivity hastens the approach of night and when it comes to those who labored not by the light of the day, they are usually groping around in the darkness of their night in a vain endeavor to capture lost opportunities.

If you are an employee keep in mind every day of the year that it depends greatly upon yourself whether or not your situation is pleasant. If some

little thing occurs to ruffle your temper think of something that will smooth it instead of resolving rashly to make a change remembering that "a rolling stone gathers no moss" and that it may be better "to put up with the evils we have than flee to others we know not of." Although this age is one of intense realism, still long and faithful service and duty well done seldom go unrewarded.

There are many gardeners and florists who many a time, when it was too late, have regretted that they had not sown some seed of this or struck some cuttings of that. Now it is always well to think of these things early in the year, and, after thinking, to act. It is much better to be a little ahead of time than hopelessly behind. Then, granting that, consider not only what you managed to pull through with last year but try to think up something that will be likely to be still more profitable or pleasure giving. However small a place a man may have he should make it a point to appropriate a favorable location for starting seeds early in the year.

There is no better time in the whole year for the propagation of a great number of indispensable plants than now when, without sacrifice or inconvenience, the necessary conditions exist.

Don't rush hard-wooded plants at once into heat; better bring them along gradually and without undue excitement.

If you have pansies crowding each other it will pay to thin them out and put those lifted into flats in good soil.

Give everything in frames out-doors as much light as possible and admit air when the weather is at all favorable.

Don't leave geraniums any longer in the cutting bench and if those in small pots are well rooted shift them. Pinch all the lanky ones; you may get some cuttings when pinching them, if you are in need of more stock; put them somewhere to root; they will make nice little plants by spring.

See Frontispiece.

THE NEW S. A. F. DIRECTORS

J. K. M. L. FARQUHAR

President Wm. J. Stewart of the Society of American Florists and Ornamental Horticulturists has appointed as directors for the regular three-year term, to succeed Messrs. Theo. Wirth and H. H. Ritter, Messrs. J. K. M. L. Farquhar of Boston, Mass., and Samuel Murray of Kansas City, Mo.

John K. M. L. Farquhar was born at Fyvie, Scotland, on July 22, 1858. His first entry into horticulture was as clerk and records keeper of the Royal Horticultural Society's experimental gardens at Chiswick, under the late A. F. Barron. Thence he went to the seed establishment of Benj. Reid in Aberdeen, Scotland. Coming to the United States he spent two years associated with his brother John at Forest Hills Cemetery, Boston, after which he was employed by the late John C. Whitin to lay out a new cemetery of 100 acres given by that gentleman to the town of Whitinsville, Mass. At the completion of this work in 1884 he started in the seed business as partner in the firm of R. & J. Farquhar & Co., which quickly developed a very prosperous business and in connection with their extensive ornamental nurseries has attained a position of eminence among the horticultural houses of America. Mr. Farquhar has held for many years an influential place in the councils of the Massachusetts Horticultural Society and at present is general superintendent of the exhibitions of that society. He has always been an advocate of the natural style of gardening for America as opposed to the Italian or architectural, and it was through his initiatory efforts that the landscape gardening classes of the Gardeners' and Florists' Club of Boston were formed. He has travelled extensively and his

observations in Japan, West Indies and elsewhere as presented in illustrated lectures have contributed much to the popular knowledge of the flora of those lands. He was, we believe, the first to suggest the deep planting of Japanese lilies. Mr. Farquhar is a man of tireless industry and a tower of strength for the S. A. F., in New England especially.

Samuel Murray was born in Brooklyn, N. Y., January 18, 1860. When two years old he was taken to Scotland where he spent his youth, returning to New York when twenty years of age and entering the employ of Peter Henderson and also held a position as private gardener, after which he went to Kansas City, Mo., where in 1889 he was one of the incorporators of the Probst Bros. Floral

THEODORE WIRTH.

Co., a concern which he managed until the ruin of their establishment by the great hail storm of 1898, since which time Mr. Murray has been very prosperous in business for himself with a store and conservatory in the business centre of the city and greenhouses farther out. As a grower Mr. Murray has won an enviable distinction. No finer specimens of Lorraine begonias have ever been shown than those exhibited by him and he is equally expert in the culture of other florists' specialties. Personally, he is one of the best liked men in the trade.

Theodore Wirth having been reappointed on the board by ex-president W. F. Kasting, to complete the unexpired term of P. J. Hanswirth who was elected to the secretaryship continues in office for two years more. Mr. Wirth is the recipient of a rare distinction in being thus appointed to serve for a second term on the board of directors of the S. A. F. Those who know Mr. Wirth, however, realize that the honor is mutual and that the national society is indeed fortunate in

having a man so thoroughly useful and energetic, willing to give his time and effort in her service.

S. A. F. LADIES' AUXILIARY.

We are requested to announce that the ladies' S. A. F. pins have been received and will be forwarded to all members as soon as the secretary, Mrs. Chas. H. Maynard, returns from North Carolina, where she has been called on account of sickness.

FLORISTS' CLUB OF PHILADELPHIA.

The Florists' Club of Philadelphia held its monthly meeting on New Year's day, afternoon and evening. Creature comforts, speeches, essays, committee reports and other interesting affairs filled up the time. There was a big attendance and a lively and fruitful meeting in all departments, the results of which will appear later. S. S. Skidelsky's discussion of "Our Credit System: Its Uses and Abuses," showed a mastery of the subject attainable only by long experience and study. It met with the general approval of the audience.

CONNECTICUT HORTICULTURAL SOCIETY.

The annual meeting of this society was held in County Building, Hartford, on Friday, Dec. 28, at 8 p. m., President Sternberg in the chair. The treasurer and secretary submitted their annual reports which showed the affairs of the society to be in a flourishing condition. Officers were elected for 1907 as follows:

President, A. C. Sternberg; vice president, J. F. Huss; treasurer, W. W. Hunt; secretary, Alex. Cumming; statistician, G. A. Parker; pomologist, C. H. Sierman.

The next meeting will be held Jan. 11, when an exhibit of carnations will be made. Visitor, J. T. Withers, Jersey City, N. J. ALEX. CUMMING.

SAMUEL MURRAY.

NASSAU COUNTY HORTICULTURAL SOCIETY.

The regular monthly meeting of this society was held on the afternoon of December 12, closing the second year of this society's existence. The roll of active members now musters 76. Starting with a chartered membership of fourteen, this society has steadily progressed both in the keen interest manifested by its members and in its financial strength. As an organization it has brought together the gardening fraternity of quite an extended area, having always the elevation of the profession as its chief aim.

In the point competition H. F. Meyer scored 83 1-3 with poinsettias, tomatoes and cucumbers; S. J. Trepass, 80 points with tomatoes and cauliflower. The prize for 25 carnations arranged for effect was awarded H. F. Meyer. For the best flowering plant A. Mackenzie was first, with a beautifully grown specimen of *Begonia Gloire de Lorraine*, in a 4 in. pot; S. J. Trepass, second, with a well-grown cyclamen.

The annual dinner of the society was voted to be held on Wednesday, Jan. 23. The treasurer's report showed a substantial balance in the treasury after meeting all expenses.

The following officers were elected for the ensuing year: President, Alexander Mackenzie; vice-president, H. F. Meyer; secretary, John F. Johnston; treasurer, E. J. Brown; corresponding secretary, J. W. Everett.

On behalf of the members of the society and in a brief and appropriate speech J. W. Everett presented the retiring president, Thos. Harrison, with a handsome gold scarf pin as an expression of the society's appreciation for the valuable services rendered by him during his two years of office. Pres. Harrison suitably replied, thanking the members for their support.

CLUB AND SOCIETY NOTES.

J. K. M. L. Farquhar will deliver an illustrated lecture on Gardening in Italy at Horticultural Hall, Boston, on February 23.

The Morris County Gardeners' and Florists' Society will hold their eleventh annual smoker at Madison, N. J., on January 9th, at 8 o'clock P. M.

The Tri-City Florists' Club met at the greenhouse of Harry Bills, Davenport, Ia., on December 13, and discussed the advisability of organizing a horticultural society, which should be open to laymen or non-professionals, and the idea was regarded favorably. The program committee reported the topics to be taken up during 1907.

PUBLICATIONS RECEIVED.

Bulletin of the New York Botanical Garden, Vol. 5, No. 16, has been issued. It is a descriptive guide to the grounds, buildings and collections, including a map and a number of excellent half-tones of the conservatories, plantations, and museum buildings.

In ordering goods please add "I saw it in HORTICULTURE."

SEED TRADE.

One effect of the lithographers' strike is a great reduction in the annual crop of calendars. It is said that the great insurance companies will not issue any this year, or if so, they will be modest "stock" affairs, and not the elaborate special designs heretofore sent out by the leading companies. A number of seedsmen are in the same canoe as the insurance companies, and among these may be mentioned the Jerome B. Rice Seed Co. This firm has for several years issued a large and handsome calendar, which has always been in great demand, but they are left at the post this year. However they announce that they will send out a calendar, but it will not be the handsome special design they had contemplated.

Are the California seed growers conducting a gum shoe canvass of the seed trade this year? At any rate it is certain that the brass-band accompaniment so identified with the visits of some of them in the past, is conspicuously lacking this time. Mr. Rentzahn has made a hurried and quiet visit to a few of his principal customers and returned home, but his name has not been mentioned in connection with the rumored combine. Whether there is any foundation for this rumor cannot be stated with certainty now, but like Banquo's ghost, it will not down, and the further report that all, or nearly all of the raw material had been cornered by the combine, makes it a topic of interesting discussion to the trade generally.

The results of the early canvass among market gardeners confirms the prediction made in these columns some months ago, that the demand for beans would be light. Following a succession of short crops, the bean crop this year has been a bumper one, and market gardeners as well as seedsmen and growers are "loaded." Probably there are enough beans to meet the requirements of the trade next year, if not a bushel of new stock is grown, with the exception of the Limas and a few specialties which are never produced but in limited quantities. In view of these facts it is scarcely necessary to say that beans are having a sinking spell, and the bottom has not yet been reached. However, conditions are not so bad as they were a few years ago and if handled wisely and conservatively by the growers, need not reach the state of demoralization which marked the situation at that time.

While new beans, and particularly colored ones, may look better than those carried one year, yet if carefully kept from the attacks of the weevil, and from the light, they will not deteriorate sufficiently to be noticeable in germination, and though faded, will not be a bad sample. Now if growers will resist the demand for new beans, and plant only enough to cover actual contracts, the situation can be pretty well cleaned up by another year. As this is quite as important to the seed merchant as to the growers, the hearty co-operation of the former should be assured.

While admitting the justice of these suggestions many will want to be the exception. "Give us new stock, and let the other fellow have the old". If

the grower says he can't do this, then he is informed that his competitors are willing to accept the conditions, and here is where the conservative grower is likely to fall—he does not want to lose business, and is quite apt to surrender; yet if he would but stand firm for one year, he would win over his weak-kneed competitors. "Here's stiffness to his backbone."

Christmas Day brought to the view of the E. J. Bowen Seed Company of San Francisco, an unhappy state of affairs. Their confidential man and head bookkeeper of long standing, Frederick Cleaves, was away from the San Francisco office on leave, ostensibly to pass Christmas with friends in another part of the state. The spirit moved the management to peer into the accounts kept by the confidential man, the findings being forgeries to the detriment of the company amounting to between \$6000 and \$7000.

CATALOGUES RECEIVED.

California Nursery Co., Niles, Cal. Catalogue of fruit and ornamental trees, palms, roses, etc.

Iowa Seed Co., Des Moines, Ia. 37th annual catalogue of flowers and vegetables seeds. Two colored plates.

W. E. Marshall Co., New York City. Spring catalogue of bulbs, plants and garden requisites for 1907. Includes a good list of novelties.

W. W. Rawson & Co., Boston. Wholesale price list of florists' seeds, bulbs and plants; also special price list for market gardeners.

Farquhar's Garden Annual; R. & J. Farquhar & Co., Boston. Full of illustrations of the finest developments in fancy flower and vegetable seeds. Colored plates of *Incarvillea Delavayi* and foxgloves adorn the cover pages.

TO ABOLISH "GRAFT."

On August 4 last, the British Parliament enacted a stringent law for the punishment of corrupt transactions with agents. The new law, entitled Prevention of Corruption Act, which went into operation on January 1, 1907, is expected to eliminate or materially reduce this form of "graft" in trade. Briefly, the act provides that any person who corruptly offers to an agent, or any agent who corruptly accepts, a secret commission shall be guilty of a misdemeanor and liable on conviction to imprisonment for a term not exceeding two years, or to a fine not exceeding £500 (\$2,433.25), or to both fine and imprisonment. We learn from the Horticultural Trade Journal that a representative meeting of Scottish nursery and seedsmen was held in the Royal British Hotel, Edinburgh, on Dec. 12, with between forty and fifty present, representing thirty-seven Scotch firms. A full and friendly discussion took place and the meeting unanimously decided to adopt a resolution on the same lines as that adopted at a recent trade meeting in London, to carry out the new law in its entirety as applicable to gardeners' gratuities, commissions, etc. An agreement was signed on behalf of nearly all the firms represented, binding themselves to carry out the resolution.

WILD SMILAX,

Obituary.

Wm. Charlton.

Wm. Charlton a widely known florist of Madison, N. J., died on December 27th. He was a native of Yorkshire, England. He came to this country about eighteen years ago and after holding a couple of private places, settled in Madison where he conducted a wholesale and retail florist business until his death. He received thorough training in the old country where he held important positions. He was a man of wide and varied knowledge, honest and upright in his business and private life. He leaves a widow and one daughter, to mourn a good husband and an indulgent father. Up to the time of his death he was treasurer of the Morris County Gardeners' and Florists' society, which position he held from the time of its organization. Many loving floral tributes were given including a huge wreath of pinks, roses and lily of the valley by the society. He was 73 years old.

John T. Doyle.

A sad Christmas eve event cast its gloom over Menlo Park, California. It was the death of a most estimable man, John T. Doyle, a noted horticulturist whose demise at his home in Menlo Park was caused by pneumonia after a two week's illness. He was born in New York city in 1819 and came to California in the winter of 1852 and soon commenced his life long career as a fruit grower and served three terms as Viticultural Commissioner for the State at large. He was a trustee of Menlo Park and became president of the board. A widow and family of grown sons and daughters, and the numerous members of the trade in and roundabout Menlo Park, and in fact all the inhabitants thereabout are in deep mourning.

Mrs. Wm. L. Morris.

We regret to announce the death of the wife of Wm. L. Morris of Des Moines, Ia., as the result of an operation after a very short illness. Until a year ago Mr. Morris had been for many years one of the most prominent florists of the city. The Des Moines Florists' Club authorized Mr. Stevens of the Iowa Floral Company to send a floral offering. Mr. Morris has the sympathy of the entire floral craft of Des Moines.

Elijah W. Wood.

Elijah W. Wood, for many years widely known and influential among the fruit growing fraternity of New England, died at his home in West Newton, Mass., on the morning of December 31, 1906, aged eighty years. The cause of death was a stomach trouble of long standing. Mr. Wood,

since his retirement from business in 1873, has given most of his time to horticultural work in connection with the Massachusetts State Board of Agriculture, and the Massachusetts Horticultural Society, also serving for three years in the State legislature and holding many positions of honor in his city. From 1887 till 1900 he was a member of the Board of Agriculture and was chairman of the Gypsy Moth Commission while it existed. Mr. Wood fought a valiant fight against the discontinuance of the campaign against the moth pest, and events afterwards showed that he was indisputably right. He was one of the best informed men in the State on apples and pears, and served for 24 years as chairman of the fruit committee of the

THE LATE ELIJAH W. WOOD.

Massachusetts Horticultural Society. He was also a trustee of the Massachusetts Agricultural College from 1887 until 1905, when he resigned because of failing health. Mr. Wood was a native of Upton, Mass. He is survived by one daughter and three sons. Mrs. Wood died last February, and since that time his health has failed fast.

Harry Graves.

Harry Graves, for many years in business with his father and brother in Montreal, died recently. He had been ailing some time but his death came unexpectedly. He was unmarried and was the salesman of the old firm.

Mrs. Robert Scott.

Catherine Buchanan Scott, widow of the late Robert Scott and mother of

Alexander B. Scott, the well-known rose grower, died December 30th at Lincoln University, Pennsylvania, in her 85th year. Interment took place Wednesday in the family lot, Woodlands, Philadelphia. Mrs. Scott was well known and greatly respected by the older generation of florists in Philadelphia.

Harry Brown.

Harry Brown, of the "Annex" house of Montreal, has gone to his long rest after suffering intensely for the last six months. Everyone knew Brown, and the sympathy of the trade is extended to his widow and family.

NEWS NOTES.

John Dugan has disposed of his nursery at Papillion, Neb., and will move to Denver, Colo., for the benefit of his wife's health.

George M. Kellogg of Kansas City, Mo., writes that the Christmas trade there has been enormous, larger by far than ever before.

The Philadelphia Record is authority for a report that the Felsbergh Rose Company will build 25 acres of greenhouses at Ambler, Pa.

Mr. Robt. Flowerday, of Detroit, Mich., mourns the loss of his 15-year-old daughter, who died after a long illness on the eve of December 25.

W. F. Kasting of Buffalo is sending out as a Christmas greeting to those who are his customers and those who ought to be, a nice office thermometer.

An overheated furnace in the greenhouse of Peter Heyler of Allegheny, Pa., started a blaze on Christmas day, but it was under control before serious damage was done.

The Detroit Florist Club showed its brotherly sympathy to Rob. Flowerday by sending a beautiful floral piece and being almost unanimously present at the funeral services over his daughter.

Elihu Snyder of East Lenox, Pa., is reported to be looking for a suitable location for a nursery in Delaware County and to be making arrangements for better railroad connections with his East Lenox place.

Evenden Bros. of Williamsport, Pa., lost about \$6,000 through a fire on December 24. The boiler house was destroyed, but fortunately the Christmas stock had been transferred to the upper greenhouses. As soon as it was possible to begin, the work of installing a new heating plant was under way.

Reports from Cleveland, Ohio, are to the effect that the Christmas flower trade was satisfactory generally and exceeded last year by a big per cent. Prices at retail were higher than usual at Christmas and wholesale rates were stiff because of a general scarcity of desirable material. Many orders for New Year's are already on the books.

THIS WIDE HOUSE QUESTION

How is a man to know things in this world—absolutely know before he invests several thousands in an idea that may be still in its experimental stages? The grower must be sort of gambler—willing to take a long chance

ridge. (See cut of section). This gives us a big volume of air aloft, which when once heated is a protection against sudden changes and preserves a more uniform temperature and humidity."

working a large house, as the sash can be opened and shut in about half the time it takes to run up and down three small houses covering same space."

In reply to other queries Mr. Coddington stated that the house runs east and west at a perfect level, but with an inside rise of 2 1-2 feet from south to north—the first bench only 16 inches in height—each following bench 2 inches higher, making the back one 32 inches; taking this in connection with the 2 1-2 feet floor rise, each bench is about 5 inches higher than its southerly neighbor so that in the shortest day one can stoop down to the edge of the bench on the farthest walk and always see the sun. "There are nine benches, each 3 ft. 11 in. wide, with ten 22 inch walks. Four plants to a bench are all that can be worked to advantage and I believe thoroughly in the side walk; you make up in quality what you possibly lose in quantity—and quality is what we are striving for. The heating is by steam—the gravity system. The houses are connected

and put a theory into practice to uphold his personal views.

The writer recently visited L. B. Coddington's range at Murray Hill, N. J., where along with five three-quarter span cypress houses, each 350 feet by 18 1-2 feet, he has two 400-footers, iron frame, one 37 1-2 feet wide, and his last one 55 feet. Having tried the narrow, the wider and the widest and having tried erecting his own houses and having it done by the builder, Mr. Coddington stood in a position to make comparisons. He has many years experience in the rose business and in addition to this range at Murray Hill, owns another at New Providence, N. J., of 62,000 sq. ft. glass area. What he and his wide-awake foreman had to say about this last house, which was erected by Hitchings & Company, will undoubtedly interest the reader. I said to him: In general terms, how do you like your big house?

"As to ventilation, the fresh air is more evenly distributed, and when it had reached the plants, is thoroughly warmed up and acts as an insulation against chills. There are fifty-foot runs of sash operated by easy running gears which are a distinct economy in

"I like it in every way; I find that such a construction gives us all possible light, that the eave line with its metal plate and glazing bar bracket make an indestructible joint of great strength and give a freedom from ice; that because of the rigid framing and the provisions for expansion and contraction, the glass breakage is practically nothing. I am thoroughly convinced that 400 feet is about the right length for economy in working and freedom from the complicated heating problems of the extremely long houses. The sides are 6 feet, with a 22 foot

with center passages and the 8-inch mains and 5-inch returns are in trenches right through them. There are two 1 1-4 inch pipes under each bench, two flows under one bench, two returns under next lower, and four 1 1-4 inch pipes hanging on each side of the house."

"I find the large house is cheaper to heat; we haven't figured it out on a percentage basis, but here is a comparison: When there are two pipes on the 18 1-2 foot house, then there should be four on the 37 1-2 foot house and six on the 55 foot, but we need to only run three on the 37 1-2 foot and four on this. That big volume of air, as I said before, when once heated up is easy to keep up.

"Now you must see the work room. It is as near fire-proof as possible. The siding is plaster board with a pebble-dash finish on the outside and the floor is made with iron beams and brick arches between, the whole cemented over. Another time we would make a solid concrete floor and no bricks. In the boiler cellar those concrete walls were built right in the trenches without any framing, and then the cellar dirt dug out. An experiment, but it worked and saved all that expense of framing a mould.

"Yes, we are every way satisfied with the construction of that big Hitchings house, and put me down as a firm believer in wide iron-frame construction."

A PROMISING CHRYSANTHEMUM SPORT.

Phillip Kirchner who is in charge of the Chicago Conservatories of E. M. Barton, 4629 Greenwood Ave., Chicago, has a beautiful pure white sport of Pink Enguehardt chrysanthemum which originated on his place the past season. It has been given the name of Mrs. Enos M. Barton and Mr. Kirchner thinks so well of this new variety that he will propagate all possible for next season. The stock, however, is limited. Several chrysanthemum growers who have seen the same predict that it will prove to be one of the best varieties produced in years.

CALIFORNIA NOTES.

Growers of flowers, and plants that bloom in the Yuletide season, have just had a Christmas inning that beats the record. The great holiday of the year was wet and windy, but the people refused to remain indoors, and there were enough of these shoppers who neglected purchases Christmas eve to keep the flower stores thronged December 25. Thirty-six of the seventy-five florists San Francisco had before the earthquake is all the city now has, and these that have re-established themselves are well pleased with the way business has come their way, and this Christmas business, a veteran plant and flower trader told the writer, "was the best we ever had."

It has been three days since Santa Claus was here with his hoisted umbrella, but now the fine, warm weather is superb, and as warm sunshine after rain always causes the grass and other forms of vegetation to grow, and dormant seeds to sprout, it goes without saying that California growers, and horticulturists generally, are in a contented frame of mind.

On the opening day of the New Year S. P. Hosp, a noted landscape gardener, will go to Pomona, Cal., to supervise the planting of eucalyptus trees in the parks of that city and map out decorative designing for each of the several parks. Last fall Pomona purchased 4000 red and sugar gums, and these will be planted by landscape gardener Hosp.

On Christmas eve, while the proprietor of the Dwight Way Nursery Company and his wife were stuffing good things in the children's stockings, they were startled by the cry of "Fire!" It was their property that was burning—the engine room of the nursery, corner of Grant and Derby streets, in West Berkeley, across the bay, the loss being fully \$500. The Berkeley fire department responded promptly and confined the fire to the engine room. Oil is burned under the boiler to heat the greenhouses, and fire caught on the building when no attendant was present.

PHILADELPHIA NOTES.

Paul Huebner is of opinion that the best cannas are not always the newest ones. His motto is: test all but hold fast to that which is good. And send out no nubbins and side eyes for roots.

Robert Schuck, late of Kohler's, started in at McKissick's Monday morning. There were many greetings from old friends during the days following and much good business.

George D. Clark of Dreer's is an enthusiast in natural sequence in catalog making. Instead of massing novelties in all departments he believes the most effective way is to bring the novelties and standards of each department one after the other. This helps in both the making out and filling of orders. Dreer's 224 page book is an ideal in every way this year.

ASPARAGUS PLUMOSUS NANUS

Greenhouse Grown, 100 seeds 60c, \$2.75 for 500 seeds, 1000 seeds \$5.00, \$23.75 for 5000 seeds.

Please do not compare this with the price of cheap, out door grown seed, which is inferior and offered at tempting figures.

MONTREAL CHRISTMAS HAPPENINGS AND PERSONALS.

Now that Christmas is over we have time to count our joys and sorrows and talk about what the other fellow has done. Trade was very good with beautiful weather until nearly noon Christmas day, when the "Beautiful" came down pretty lively. Cut flowers did not sell perhaps as well as usual, but the great sale of plants more than made up for it.

Mr. Gray of Sinclair's, Wright Floral Co., Harris & Hopton, Miss Murray, McKenna, Rennie & Cooper, and Hall & Robinson report stores crowded with eager buyers all Christmas eve. The latter firm had some very fine cyclamens, some of which had over 150 flowers. McKenna's store was prettily decorated with long streamers of silk ribbons in various hues and holly wreaths. Christmas trees were in great demand and there were not half enough to go around. Mistletoe was very scarce, but holly was in quantity and well berried.

A. Gilmore of Montreal West was burned out the Saturday before Christmas. This is a new place and Mr. Gilmore has the sympathy of the trade. I have just heard that he intends retiring from business and has sold out to Harris & Hopton.

Goulet's driver was recently sent out with some C. O. D. goods but he never came back until one of the "finest" landed him, and he is now doing time with his Christmas dinner thrown in on a bargain.

Bert Graves, whose brother's death is noted in the obituary columns, is much improved in health, but is giving up his store, his impaired health rendering this necessary.

One of Judge's boilers gave out Christmas week with the thermometer 20 below zero, but they fixed up stoves and saved their stock.

Dupuy & Ferguson are having their store repainted and are getting ready for spring. Cooper is also putting in new fixtures.

Bain will remove May first from his Catherine street store, his landlord requiring the store for himself.

Wm. Cooper, Jr., is spending his vacation with friends at Hawkesburg, Ont.

George F. Struck, who has for a number of years successfully represented the orchid specialists, Lager & Hurrell, on the road, has widened his scope and will hereafter also represent the F. R. Pierson Company with a general line of greenhouse plants, bulbs and fancy nursery stock.

CUT FLOWER MARKET REPORTS

BOSTON Market very quiet in Boston this week. There is no great superfluity of anything, but demand is so light that prices are receding on all lines. Retailers are settling down on pre-holiday figures and resist paying more. Still trade can be fairly stated as fully up to the average January standard.

BUFFALO Remarkable flourishing condition in trade this season. While the weather has not been so conducive to shopping as last year at this time, florists say the volume of Christmas business in some respects doubled in the plant line. Ardisia, poinsettia, araucaria, Gloire de Lorraine, azalea and cyclamen sold well. It may be said that the severe cold day on Monday before Christmas caused much worry in the delivery of plants. Reports were that a considerable amount were frozen. Pine, holly, wreathing, laurel, boxwood sprays and Christmas trees were in good supply and everything cleaned up well. In the cut flower line business was also brisk. Flowers were somewhat scarce up to Saturday, when stock came in quite abundantly and shipping trade was excellent. Good select stock of Liberty, Richmond and Bridesmaid was scarce. Killarney helped out wonderfully. Beauties were in fair supply and violets were in great demand and sold well and at good prices. Carnations were not too plentiful, but a good supply was had and good stock brought satisfactory prices. Red varieties as usual were most in demand. Easter lilies, swainsona, peas, lily of the valley and other flowers sold well. A few thousand Mrs. Jerome Jones chrysanthemums were still on deck and helped out considerably. Stevia was well in supply, also other greens. The last week in the old year wound up satisfactory to all, and reports from the craft state all well satisfied with the holiday trade. At the time of mailing this report (Monday, Dec. 31) flowers of all kinds are to be had. Violets more abundant and prices much lower than reported, the atmosphere at temperature of 65 degrees, and an ideal spring day.

CINCINNATI The usual bluster about doing "a third more business for the holidays than we did last year" is "not so's you can notice it." Stock of every description was scarce, and consequently high prices prevailed. Poinsettias are still growing in popularity, there being an unusual number grown this season, and it is safe to say that half as many again could have been sold. In roses Beauties were exceedingly scarce but good, while Bridesmaids showed the effects of the cloudy weather and were off color. Vast quantities of violets were sold, but still there was not enough to satisfy

all. Those who were fortunate enough to have the stock did a great business and got their own price for anything that was good. The weather was cold, it being 10 deg. above zero on Christmas morning, and many a dollar's worth of flowers were frozen. The express companies were unable to handle the rush and much of the incoming freight was frozen and delayed from twelve to twenty-four hours. There was but little complaint about pickled stock, but several were the kicks about stock being cut a day or so too soon. Several of the craft who are wont to overstock for the holiday trade will likely find that to them the scarcity of flowers was a blessing in disguise. Plants were more popular than ever before, but much valuable time was consumed in wrapping them to keep out the frost.

COLUMBUS Christmas, as was expected from advance indications, was just about an average business of previous years. All cut stock cost so high, that it was out of the question to get any extra trade over-the-counter. The regular flower buyers bought liberally as usual, but in the absence of any large amount of outside buying, only an average business could be expected. Prices were cut some towards the end, when it was seen that things were going hard. As regards plants they sold very well, but not very much can be said in praise of their quality; on the whole plants were a poor lot. Green stuff sold well and in large quantity, but some of it was very poor quality, especially the holly, much of which was light in color and without berries. Prices for greens showed no change from previous years. On the whole the business was about an average of past seasons. The weather was against trade, being warm and stormy.

DES MOINES The Christmas business seemed to be satisfactory to all engaged in it. Poinsettias were noticeable in all the windows, and sold well. First quality Enchantress carnations were all cleaned up at about 25 per cent advance over the price of other varieties. In the plant line the azalea as usual was the leader, some poinsettias in pans were in evidence, and a variety of other blooming plants, including a good supply of ferns and palms. Bouquet green was scarce, consequently wreathing sold at a high price; in fact the supply was not equal to the demand at that. There seemed to be plenty of holly, fairly well berried. Violets, both single and double, had a good sale.

Loziers', the Alpha Floral Co., and the Iowa Floral Co. all report a record trade. This is the first Christmas for the Iowa Floral Co., so they cannot make a comparison, but they are well

satisfied with the amount of patronage that came to them.

DETROIT Detroit florists are looking back to the largest Christmas business for many years. There was a notable increase in the sale of plants and plant baskets. The wholesale houses were cleared out early and few florists had any flowers left Christmas noon. Violets and carnations were very short; poinsettias helped somewhat to cover this shortage.

LOUISVILLE Business conditions the previous week were very good, stock in almost every line being cleaned out. Carnations had a very good demand, and the supply became short. The quality was excellent. Roses had a satisfactory demand. They were of fair quality, and in good supply. Violets, lilies of the valley, and other stock were in good supply, and had a steady call.

NEW YORK New Year's business was very tame and supplies of all kinds sufficed to supply it. There were not many long Beauties in the market, but a few more from each grower would have been surplus; as it was the price fluctuated and only at the wind-up of business on Tuesday morning did the price steady. Of small roses there were a-plenty to fill all wants and some Brides to spare. Prices were weak throughout all of Monday. Carnations just cleared with many concessions in price. The violet growers kept most of their flowers at home last week and sent them into a market Monday that could not digest them all. The few gardenias and cattleyas shipped in were sold.

PHILADELPHIA Following the Christmas rush the balance of the week was very draggy in the cut flower market here. There were plenty of flowers and of fine quality but no life to the trading. Among roses Killarney was probably the best seller. Beauty was far too plentiful. The flush is over on this variety and it will be scarce from now on. Carnations were fairly abundant but like everything else they suffered from the prevailing sluggishness. If there was improvement anywhere it may have been in the violet market. Mignonette is now coming in and selling well. It is a late crop this year and not of extra quality as yet. Orchids are more plentiful, with prices steady, as last reported. White lilac is now arriving in limited quantity. New Year's trade used to cut a large figure in this market but it has gradually lost its importance and now rises little above the normal day's business.

For other Market Reports see page 21.

A. T. PYFER, Manager.

PERSONAL.

A. Lozier of Des Moines is in the South for his health, and the business is being ably managed by his brother Harvey during his absence.

Ernest March, formerly at Grey-stone, Yonkers, N. Y., assumed the position of foreman of the greenhouses at Wyndhurst Gardens, Lenox, Mass., on January 1, 1907.

Dr. H. J. Webber of the Bureau of Plant Industry, Washington, D. C., will take charge of a new department at Cornell University to be known as the department of experimental plant biology.

Orlando Harrison, president of the National Association of Nurserymen, E. Albertson of Bridgeport, Ind., and Prof. John Craig of Ithaca, N. Y. were in New York last Saturday attending the conference of Economic Entomologists.

Gus. Papas of Des Moines got back to his store Christmas day, after three weeks in the hospital, undergoing a very critical operation. During his absence the Alpha business was in charge of G. A. Conopulos of Chicago.

CUT FLOWER MARKET REPORTS.

Continued from page 15.

INDIANAPOLIS The trade in general report the most successful Christmas in years. Probably never before were so many plants sold. The chief method of selling them was in made-up baskets, flowering and foliage plants being mixed. Nothing new was to be seen, but there were a much larger number of azaleas handled than in former years. As usual the pieces of cut flowers went very high, Beauties and tea roses being very scarce. The retail stores bought heavily out-of-town as the home growers could not begin to supply the demand. That plants are being used more and more at this season is evident and that the cut flower trade does not increase proportionately has also been apparent this season. The evergreen trade was exceptionally good, holly being sold in large quantities.

A FITTING TRIBUTE.

In memory of the late Lewis Ullrich and his efforts in beautifying the city, David J. Stalter, a friend of many years' standing, has bequeathed to the city of Tiffin, Ohio, a parcel of ground to be known as Ullrich Place. The land is centrally located and contains a handsome maple grove.

WANTED.—Man with some experience in growing of ferns. Steady employment to sober and industrious man. Address: A. Lenthly & Co., Rosindale, Mass.

"HORICUM"

TRADE MARK

San Jose Scale on a Pear.

Kills San Jose.

HAMMOND'S SLUG SHOT WORKS.

"HORICUM" A Scale Killer and Fungicide

A preparation for the destruction of the "SAN JOSE SCALE"; carefully prepared and put up in packages for general use.

"HORICUM" can be obtained from many of the Seedsmen in the United States. A description of the article is aptly told in the pamphlet. It is put up in quarts and gallons to 50 gallon barrels. It is the Lime, Sulphur, and Salt combination, concentrated.

ABOUT "HORICUM"

Glenside, Pa., March 31, 1906.

Hammond's Slug Shot Works, Fishkill-on-Hudson, N. Y.

Gentlemen: Seeing "Horicum" mentioned in Monthly Bulletin of Div. of Zoology, Penna., I would thank you to inform me where I can get a supply, say about a gallon, for trial. The San Jose Scale is very bad around this section and could no doubt push sale of the solution, especially as it is spoken of so highly in the above mentioned Bulletin.

P. S. Glenside is twelve miles from Philadelphia.

Yours respectfully, H. J. HINDS.

Send for Pamphlet on "Bugs and Blights" to B. Hammond, Fishkill-on-Hudson, N. Y.

PLANT NOW FOR EASTER

SPIREA FOR EASTER FORCING

If you have not all the spirea that you want for Easter and Decoration Day, we still have a few thousand fine clumps left, which we offer as long as unsold as follows:

Gladstone. The best of all the spireas. Free bloomer, fine large spikes. Extra. Selected clumps, \$12.00 per 100.
Astilboides floribunda. \$5.00 per 100, case of 300 clumps for \$12.00.
Compacta multiflora. Strong clumps, \$6.00 per 100.
Japonica. Strong clumps, \$5.00 per 100.

GLADIOLUS COLVILLI

Alba "The Bride." White. 75c. per 100, \$6.00 per 1000.
Kubra. Red. 60c. per 100, \$5.00 per 1000.

MINIATURE HYACINTHS, or DUTCH ROMANS.

We still have a few thousand of these left, which we can supply in a fine assortment of named varieties. \$2.00 per 100, \$16.00 for 1000.
These can be potted up, if done at once, and will make nice Easter stock.

NARCISSUS

Double Von Sion. We have a few thousand extra quality bulbs to offer. \$1.50 per 100, \$12.00 per 1000.

Priniceps. A few thousand extra sized bulbs. 75c. per 100, \$6.50 per 1000.

Single Von Sion. \$1.25 per 100, \$10.00 per 1000

TULIPS

Cottage Maid. The best pink for late forcing. \$1.00 per 100, \$8.00 per 1000.

Keizerskroon (Grand Duc). The favorite forcing variety. \$1.75 per 100, \$15.00 per 1000.

LILY OF THE VALLEY

Pierson's Premier. Best selected Berlin for earliest forcing. \$1.50 per 100, \$13.00 per 1000. Case of 2000 for \$24.00.

If you can use any of the stock offered, let us have your order quickly.

F. R. PIERSON CO., - - Tarrytown-on-Hudson, New York

MABELLE NEW PINK CARNATION FOR 1907

COLOR—A peculiar shade of lovely pink, with a faint yellowish cast; several shades lighter than the Lawson. Unlike most Pinks, the brightest sun does not injure the color. **SIZE**—3 to 4 inches in diameter when established. **ODOR**—Pleasing, but not strong. **STEMS**—Invariably strong, but always graceful, ranging from 12 to 30 inches during the season. **HABIT, etc.**—A very quick, active grower, making specimen plants in a short time, even from late cuttings. On account of its rapid growth, requires supporting very soon after benching. Gets away rapidly, blooms early and gives long stems right from the start. **PRODUCTIVENESS**—Prodigious is the best word we know of to use here. It is the most incessant bloomer early and late, we have ever grown. **Stock Limited. Delivery January 5th to 10th and later.**

Price \$12.00 per 100, \$100.00 per 1000

The H. WEBER & SONS CO., Oakland, Md.

CARNATIONS.

Red Chief—Bright scarlet—early and very productive. \$12.00 per 100; \$100.00 per 1000. Average 3 in. flower. A leader in every respect.

Bonnie Maid—Clear pink edged white.—\$12.00 per 100; 100.00 per 1000. Large well formed bloom. Very early and productive.

F. DORNER & SONS CO.
La Fayette, Ind.

DON'T Be Afraid To Invest In

ROSE PINK ENCHANTRESS

It is both free and "fancy"—a sure money-maker.

Price \$7.00 per 100; \$60 per 1000

Delivery January and later. Write for Descriptive Circular.

S. S. SKIDELSKY

824 No. 24th Street, Philadelphia

Ornamental Conifers—Pinus

(Continued from Page 717)

PINUS STROBUS NANUS

FIVE NEEDLES IN A BUNCH

Pinus Strobus, the white pine, is well known for its usefulness in big plantations; there are some very distinct forms of it to isolate or to plant in beds. *Str. umbraculifera*, a dwarf growing form with long silvery needles; *Str. nana* or *pygmaea*, another dwarf growing form, compact, with erect shoots and short needles; *Str. pyramidalis*, of a narrow, straight growing habit; *Str. gracilis viridis* has very thin green needles but is a slow grower. *P. monticola*, the western white pine, looks much like *Strobus*, growth more slender and of dark green color; isolated on the lawn it is of good effect.

P. Balfouriana or *cristata* from the eastern slopes of the Rocky Mountains is a curious pine; the long shoots are clothed with short needles adpressed against the shoots with a brush like end. It is a slow grower but interesting and hardy. There are a few dwarfer and stouter growing forms found, according to the altitude where they come from.

P. Lambertiana, the sugar pine, is a western tree, the tallest of all the American pines. It grows to a high, narrow pyramid, and is a beautiful tree but does not thrive very well in the East.

P. Cembra, the European stone pine, is a very nice tree for the lawn. When young it is very compact and pyramidal in form; very distinct and hardy. There

PINUS PEUCE

is a Siberian form, a more vigorous grower with slender habit and shorter needles.

P. Peuce, or *Peuke*, from Macedonia, is another good tree for small lawns, of a perfect dense pyramidal form, very compact, dark green in color and resembles *cembra* when young but has longer shoots, longer needles, and is larger in diameter; it is said to be a form of *excelsa*.

P. excelsa, Himalaya pine. A noble tree resembling *Strobus*, with longer pendant needles and a more drooping habit in the branches. It is a tree which wants much space as in mature specimens the branches spread a great distance.

P. parviflora comes from Japan, has short rough recurved needles of a dark grayish green color, does not grow to a great size and is of an irregular spreading habit; good for the small lawn. *P. brevifolia* is a form with shorter recurved needles and is a smaller tree of the same habit.

P. pentaphylla is often mistaken for *parviflora* which it much resembles. It is a more northern tree, however, also from Japan, having the same way of growing, but with longer and lighter green needles.

one a severe loss in his taking away to his associates and fellows. Serious as are such bereavements to family and personal friends they are none the less so to the cause of horticulture generally, although, perhaps, not so keenly felt at the time. We hope that the year now opening will deal gently with us and that the energetic men who are the mainstay of our commercial and society life today may all be still with us when 1907 has passed into history.

Plain catalogues this year

Attention has been called, some time since, in our seed trade notes to the inconvenience suffered by the catalogue makers as a result of the widespread strike of the lithographers. Rarely does the course known as a strike benefit those on whose behalf it is made or permanently remedy any of the evils against which it assumes to protest. So far, however, as the intent is to inflict injury on others the strike is always a pronounced success and, in the long run, all those concerned in it are pretty sure also to suffer equal or greater penalty. The catalogues which are now beginning to come to hand are, as expected, models of plainness, although there are a few exceptions, such as where one seedsman took the precaution to order his colored covers from abroad. But the contents and the stock represented is just as desirable as though exploited in the highest style of the lithographic art and it would be absurd to imagine that the sale of seeds for the coming season will be any less than it would have been otherwise. So the loss falls not so much on the seedsmen as on the lithographic trade and, furthermore, we should not be surprised to see a permanent curtailment of the amount spent annually by the seed dealers on lavish catalogue adornment. If it should so turn out no harm will come of it and there will be more money available to put into quality of seed and encourage careful seed growing, which will be a better place for it than the lithographers' pockets.

The Lima Bean—Black or White

Editor HORTICULTURE:—I have been much interested in Mr. O'Mara's instructive essay on "Sports," and desire to give an experience of my own, with Bush Lima Beans. About ten years ago I bought two kinds of Bush Lima seed—Henderson's, and a black seeded variety—name forgotten. The black seeded variety was very hardy and productive—a counterpart of Henderson's in every way, except in color of seed. They were sown on the same patch—three rows of each. When nearing maturity I noticed among Henderson's an extra robust-looking plant with larger pods and seeds—the seeds were green. Henderson's are white. I marked the plant for seed. It had besides a running habit—not decidedly so, or as much as the common climbing Sieva Lima. The next season I sowed all the seeds in a long row and watched their development closely throughout the season. Many resembled Hen-

As usual at this dreary season of the year it has been our sad duty to report, in our recent issues, many deaths in the profession, some shining lights and others more obscure, but each filling his place in the profession as seemed to him best, and each and every

Death
keeps busy

derson's in habit, and some "ran"; these latter I pulled out. A little more than half took the true bush form. The healthiest and most prolific were marked separately—about 25 per cent. Imagine my surprise when I came to shell out the seed to find nearly half of them were black. I had in mind when I selected it to introduce the variety. That it could not be depended upon to come true from seed I saw at once was a certain drawback, but I felt no doubt, that by selection, that would be overcome.

In this surmise I was doomed to disappointment. For next season's trial I selected all the largest white seeds, and did not sow any black ones. About half came black and a few of the white ones "ran," but I pulled out all of these except one or two to test as to whether the running forms would go "black." Furthermore, I noted the second season as to whether any plant bore part of each color. No; they were either black or white. Though I planted them for five years afterwards, there was still a large proportion of black seeds, and never a black seed planted, or grown anywhere near to my knowledge. I then gave them up for a bad job, but others continued the work later and reported always a few black ones.

Can any of your readers tell me if the Lima bean in a wild state is black or white? I have a suspicion that this was a case of reversion, and that the black seeded variety is a stronger type.

Wellesley, Mass.

National Chrysanthemum Society of England

WINTER EXHIBITION

The chrysanthemum season in England may now be said to have come to an end. It began with the show organized by "The Evening News" on the 20th of September and terminated with the N. C. S. exhibition of late flowering chrysanthemums at the Crystal Palace on the 5th and 6th of December. Between those dates there have been, as usual, numerous shows all over the United Kingdom.

At the final gathering of the "mum"-loving fraternity Mr. H. J. Jones exhibited a very handsome floral arrangement that denoted the exercise of great artistic skill and ingenuity. It consisted of a large oval shaped group 33 ft. x 12 ft. set up on a ground of dark green cloth. The blooms were arranged in huge bunches of finely developed examples in tall Japanese vases. Others were staged in bamboo supports, while for variety there were dotted here and there round the margin of the group single specimen blooms in small vases. Mingled with the various masses of color were bamboos and ornamental foliage plants, and the whole

enclosed, so to speak, with an edging of ferns. The most effective vases of blooms in the group were composed of Algernon Davis, Mrs. F. Lunt, Mme. Rene Oberthur, Market Gold, Money-maker and Mrs. Beech, a grand self-colored incurved, big and solid, pale yellow. There was a goodly array of singles also shown in masses and these pretty varieties against the big Japanese formed a striking contrast that seemed to be much appreciated by the visitors.

Messrs. H. Cannell & Sons had a collection of cut chrysanthemums in vases. Nagoya, Embleme Poitevine, Yellow Lord Brooke, Cannell's Late Prolific, Winter Cheer, Princess Victoria, Heston White, Golden Age and many others being included. The same exhibitors also staged one of their well-known brilliant compositions of zonal pelargoniums.

Messrs. John Peed & Sons had a pretty group arranged for decorative effect. Ferns and palms intermingled with big blooms and singles in great variety formed the chief characteristic of this display.

Mr. Phillip Ladds showed cut chrysanthemums in vases. Mme. Ed. Roger, Mme. G. Rivol, Western King, Snowdrift, Mlle. Louise Charvet, Nagoya and Buttercup were plentifully shown.

Mr. Wells had a very nice lot of singles and decorative kinds also arranged in vases. We particularly noticed Mrs. W. J. Harting, King of Siam, Mrs. J. Carlisle, F. W. Smith, Harold Shaw, Gracie Trower, Gertrude.

The floral art was well represented by many exhibitors. Handsomely arranged baskets, and epergnes filled with chrysanthemums and autumn foliage in endless variation shared the artistic value of the popular flower at this dull season of the year.

A class that would probably excite interest in the minds of those who visited an English show for the first time was that for six benches of small-flowered chrysanthemums. Quite a long array of vases included these exhibits composed of dainty little button-shaped chrysanthemums not an inch in diameter. Little Pet, Snowdrop, Primrose League, Lilac Gem, and Miss G. Waterer were some of the most attractive of these little floral gems.

The ordinary competitive classes for six, twelve and twenty-four cut blooms in the incurved and Japanese sections, the blooms being shown on boards, were well filled. Other classes were provided for by the schedule in which the competitors staged their exhibits in vases.

Flowering begonias were a feature of the show. Gloire de Lorraine being set up in an imposing array. Carnations were contributed by M. S. Mortimer and Messrs. Cutbush & Son who had a fine table, not for competition. Duchess of Portland, Mrs. R. Norman, Ethel Ward, White Lawson, Fair Maid, St. Louis, General Kuroki and many others were staged.

Chas. Man Payne

NEWS OF THE CLUBS AND SOCIETIES

NEW JERSEY FLORICULTURAL SOCIETY.

The regular monthly meeting of this society was held on the 4th instant at which the installation of its new officers took place: President, W. J. Bennett; vice-president, Arthur T. Caparn; secretary, Henry Halbig; treasurer, William Reid; conducted by the retiring president, D. Kindsgrab. Reports were read showing a membership of seventy in good standing. Eleven competitive floral displays, a fall exhibition and special rose and dahlia nights have been held. Seven silver cups and eighty-six certificates have been awarded. The winners of the seven cups were Peter Duff, William Reid, Max Schueyder, William Phillips, Arthur T. Caparn, A. W. Bodwell and Lager & Hurrell. Among those certificated were Julius Roehrs Company, Alex. Guttman, F. R. Pier-son Co., Lager & Hurrell, John E. Haines and Joseph A. Manda. Generous patrons have raised the balance in the treasury to three hundred dollars. Essays or addresses have been made at nine of its meetings at which the average attendance was thirty-two. The largest attendance was forty-two, at a lantern slide exhibition of English scenery and the smallest, twenty-four, at the annual election on Dec. 7. In its final deliberations it was decided to continue the monthly floral displays and the giving of medals instead of cups is under consideration. An invitation was read from the Morris County Gardeners to their smoker on the 9th. Among the floral exhibits of the evening were a vase of lily of the valley with stems nineteen inches from base of stem to top of flowers, shown by Julius Roehrs Company and a white *Cattleya labiata* shown by Thos. Jones.

JOSEPH B. DAVIS.

THE AMERICAN CARNATION SOCIETY.

President Dunlop has authorized me to announce through the trade papers that exhibits for the show to be held in Toronto, Ont., Jan. 23d and 24th, will have to be staged by 2 P. M., Jan. 23d, instead of 1 P. M. as announced in the premium list.

This addition of one hour to the time for staging was thought advisable on account of the fact that some of the trains do not get in until 10:30 and if they should be a bit late it would not give exhibitors time to get their flowers staged by 1 P. M.

Kindly remember that entries are to reach the Secretary not later than Wednesday, Jan. 16th. Entries made at the show cost \$1.00 for each entry, and if they do not reach here the 16th there is danger of their coming in after I have left for Toronto.

ALBERT M. HERR, Sec
Lancaster, Pa.

For the trip to Toronto, January 22-25, 1907, we will use the New York Central lines, and arrangements have been made to attach an extra sleeper to train leaving Grand Central Station 8 p. m., Tuesday, Jan. 22, arriving at Toronto 10:50 a. m., Wednesday, for the accommodation of members from

New York and contiguous territory. In order that we may early perfect all arrangements for the car, it is requested that members advise the undersigned as soon as possible if going, and space desired.

The rate authorized is one and one-third fare on the certificate plan, or \$11.85 from New York going, and one-third, or \$3.55, returning, conditioned on there being 100 in attendance from all quarters, and also on members securing certificates when purchasing tickets and having same properly vised in Toronto before returning.

Going tickets will be sold and certificates issued Jan. 18 to 23, and certificates will be honored for tickets returning until January 29.

Cost of berth New York to Toronto, \$2.50. Tickets can be purchased and certificates secured from any of the New York Central Lines offices, or if desired arrangements will be made to have some delivered.

If any prefer to leave in the morning, they may take the Empire Express, 8:30 a. m., arriving Toronto 9:05 p. m.

Eugene Dailedouze, Clarkson St. and Troy Ave., Brooklyn, N. Y.
C. W. Ward, Queens, I. N. Y.

LENOX HORTICULTURAL SOCIETY

The regular meeting of this society was held on January 5, President Heeremans in the chair. The entertainment committee submitted a program for the ensuing meetings. For February they have arranged the annual dinner for the 2d and carnation night for the 16th. Harry A. Bunyard gave an interesting talk; he offered a medal to the winner of the society's checker tournament, and a donation from A. T. Boddington for the fall show premium list.

A. J. Loveless was awarded a first-class certificate for *Cypripedium Lee-anum Adela*, a plant raised by him; also diploma for C. insigne *Sanderae*, C. insigne *Harefield Hall* and C. Lee-anum *Clinkaberryanum*. J. R. Shields of Dalton was awarded a cultural commendation certificate for some extra fine plants of *Begonia Gloire de Lorraine* and diploma for *Primula obconica*. GEORGE FOULSHAM, Sec'y.

ELBERON HORTICULTURAL SOCIETY.

The Elberon Horticultural Society, on Jan. 7, held a most interesting meeting and the principal feature was the elegant display of fine carnations consisting of fifteen vases, comprising *Enchantress*, *Lawson*, *Victory*, *Rob't Craig*, *Lady Bountiful*, *White Lawson*, and one large vase of *Winsor* from F. R. Pierson Co., which was admired by all. Mr. Bauer gave an interesting talk on the carnation of the past and present in a most able manner. The society extended Mr. Bauer a hearty vote of thanks. The following beautiful flowers and vegetables were exhibited: A. Bauer, carnation and celery; A. Greib, Marie Louise violets; James Kennedy, carnations; Wm. D. Robertson, *Centradenia florida* and mushrooms; Henry Wood, carnations and vegetables; Peter Murray, carnations; Fred Wm. Dettlinger, Princess of Wales violets.

GARDENERS' AND FLORISTS' CLUB OF BOSTON.

The meeting on January 15 promises to be an unusually attractive one. It will be Ladies' Night and an attendance of over 300 members and ladies is expected. A stereopticon lecture on "Italian Gardens" by John K. M. L. Farquhar should prove very fascinating, and a treat no one should miss. The newly elected officers will be installed and an address from each is on the program. There will be interesting exhibits, music and refreshments and no efforts will be spared to make the opening meeting in 1907 the best in the club's history.

W. N. CRAIG, Sec.

MASSACHUSETTS HORTICULTURAL SOCIETY.

The inaugural meeting for 1907 was held at Horticultural Hall, Boston, on Saturday, January 5. President Weld delivered his address and the various officials of the society presented their reports. It was announced that C. E. Richardson had resigned as superintendent of the building and that the trustees had appointed Secretary Rich to hold that position, also to act as assistant to the treasurer, Walter Hunnewell. The advisability of opening the library on Sundays or some stated evenings so that it might be a greater convenience for those who wish to consult it, was referred to a special committee consisting of the librarian and J. A. Pettigrew.

BOSTON HORTICULTURAL LECTURES.

The first in the annual winter course of free lectures on horticultural subjects given by the Massachusetts Horticultural Society will take place at Horticultural Hall, 300 Massachusetts avenue, Boston, on Saturday, January 12, at eleven o'clock.

The complete program is as follows: January 12, "The Iris and Its Culture," by J. Woodward Manning, Reading; January 19, "Peach-growing Possibilities in New England," by Adin A. Hixon, Worcester; January 26, "The Collecting of Orchids," by John E. Lager, Summit, N. J.; February 2, "The Renovation of an Old Orchard," by George T. Powell, New York; February 9, "The Home Vegetable Garden," by John W. Duncan, Jamaica Plain; February 16, "Certain Uses of the School Garden," by Miss Anne Withington, Boston; February 23, "Forestry from a Commercial Standpoint," by Prof. Frank Wm. Rane, Boston; March 2, "Planting for Streets and Waysides," by John A. Pettigrew, Boston; March 9, "Some Bacterial Diseases of Plants: Their Nature and Treatment," by Prof. H. H. Whetzel, Ithaca, N. Y. (the John Lewis Russell Lecture); March 30, "Gardens of Italy" (with stereopticon illustrations), by John K. M. L. Farquhar, Boston.

After the lecture opportunity is afforded for a full discussion of the subject and questions are welcomed. The object is to give all possible information concerning the topic under consideration, and the various subjects will be treated by well-known experts

in the several lines. All interested are invited to attend these lectures.

WM. P. RICH, Sec'y.

NORTH SHORE HORTICULTURAL SOCIETY.

The annual meeting of this society was held on the evening of January 4, at Manchester, Mass., when the following officers were elected: President, James McGregor; vice-president, Thomas Jack; treasurer, John Baker; secretary, James Salter; financial secretary, Herbert Shaw; executive committee, J. B. Dow, J. Desmond, W. F. Powers, C. A. Lincoln, F. C. Cole. A new feature was the election of William Tell as press agent. Among the visitors of the evening were D. Iliffe of Boston and H. Thiemann of Belchertown.

Reports showed a very successful year's work with a good balance in the treasury.

CLUB AND SOCIETY NOTES.

The ball of the Newport Horticultural Society was held on the evening of January 9.

The Horticultural Society of New York met on January 9th. An illustrated lecture was given by Dr. H. H. Rusby on The wild grains and nuts of the United States.

It is rumored that a horticultural society is likely to be formed at Pride's Crossing, Mass. There is a large amount of glass there and considerable interest in matters horticultural.

The Dutchess County Horticultural Society met in Poughkeepsie, N. Y., on December 26 and nominated officers for the ensuing year. George Foulsham of Lenox, Mass., read an interesting paper on The cultivation of orchids.

President Dunlop requests us to urge all growers of carnations to send generous exhibits to the Toronto convention which opens January 23. Canadian growers are interested to see the products of the leading growers and hybridizers and are awaking to the great importance of the opportunity to meet and discuss and form social and business alliances with the leading minds in the profession in the United States. Every inducement will be offered to visitors to make their participation pleasant and profitable.

THE LATE COUNT KERCHOVE DE DENTERGHEM.

An International Committee consisting of Belgian, German, Bavarian, English, French, Dutch, Swiss, Italian, and Russian horticulturists has now been definitely constituted for the purpose of erecting a monument to the memory of this illustrious lover of horticulture.

Subscriptions are being invited for the purpose and if any readers of HORTICULTURE desire to add their names to the list I shall be pleased to receive donations, as an authorized member of the International Committee and forward same to the proper authority.

C. HARMAN PAYNE.

141 Wellmeadow Rd., Catford, S. E., London, Eng.

MIDWINTER MEDITATIONS.

In your editorial of last week you mentioned the landscape class having been opened under the auspices of the Gardeners' and Florists' Club of Boston. I sincerely hope the young men in that class will take advantage of the lessons given. Even those in the commercial business ought to take in this study; it may become useful to them in after years. Every encouragement ought to be given the class. Some field days would, "when the spring opens", be beneficial and help along the knowledge gained under their instructor. I am sure every gardener who has charge of an estate of any size would be pleased to have them go over the same. The Hunnewell estate, for example, would be educational; there the work is so close to nature; rolling lawns have been laid and the shrubbery has been planted so that nature has been assisted. Set designs of shrubbery and straight paths that we sometimes see are a horrible example of some of our so-called landscape work. What would some of us have given to have had opportunity to acquire knowledge so valuable, when we were in our apprenticeship days? Burns probably didn't have training in the art of landscape work yet he gives us in the following one of the best descriptions of natural conditions, which is exquisite in its wording, and delightful in its phrases, and I think among the best ever written.

"Whyles owre the linn the burnie plays.

As through the glen it wimpl't;

Whyles round a rocky sear it strays;

Whyles in a wiel it dimpl't;

Whyles glitt'ring to the nightly rays

Wi' bickering, dancing dazzle

Whyles coo'it underneath the braes

Below the spreading hazel."

I see Job has started on a rampage again.

"He dips in gall unmix'd his eager pen,
And pours his vengeance in the burning line."

The King can do no wrong and I suppose he fancies himself in that class. He will feel proud to be mentioned in the same breath with royalty. In the first issue last year, of your New York contemporary, he started off on a rumpus because you mentioned that HORTICULTURE had "fairly leaped into the affections of the craft." He said then that it was "only fleas that leaped." He being a standard authority on that insect I dare not dispute him, but in his December 29 issue under the head of The New York Market it is given us that "orchids leap and bound." Gee Whiz! fleas again. I never saw or heard of an orchid doing these acrobatic stunts. When some private gardeners and also commercial men wish to say something that will puzzle you they stand off and throw out a few mouthfuls of orchid names then look to see what effect they have made. That's bad enough, but when the poor plants begin to leap I give it up.

I am sorry I can't go to the carnation convention; the trip will be interesting. Last year I attended it but will have to forego the pleasure this year. The poet's birthday comes this month as well as my own and the two celebrations in conjunction with the convention would be too strenuous. If the fates are right next August, I should like to go to Philadelphia. George Watson will not give us scrap-

ple, but I hope will have a haggis wi' trimmings prepared for himself, Birnie and me. If Job is there he might get an invitation to dine on his favorite dish and read some of his selected poems, but I hope he will leave his fleas at home. R. T. MCGORUM.

CALIFORNIA NOTES.

The exceeding good florists' Christmas trade reported last week lapped over and became identified in conjunction with the phenomenal New Year plant and flower traffic, the best New Year's business remembered by dealers longest established and the sunshiny weather that came the day after Christmas continued until after New Year's day.

Just in time to get a good share of the unprecedented patronage extended by flower and plant buyers these holidays, N. Peterson entered the arena, locating his handsome plant and floral depot at 324 Fillmore street. This is a new venture for this excellent young man, intimately known to the writer during his years of training as a grower in connection with the John H. Sievers Nursery Company, and the last four years of service as superintendent of this nursery.

This 4th day of January Fred L. Cleaves, former chief bookkeeper for the E. J. Bowen Seed Company, the oldest in the Pacific coast trade, was placed under arrest on three charges of felony embezzlement. Osgood Putnam, manager of the seed company, is the complaining witness. He states that the amount of money diverted by Cleaves will reach \$8,000. The alleged peculations extend over a period of two or more years. The accused is charged with falsifying books of the firm and to have forged drafts for various sums of money.

The holiday season just past was remarkable in San Francisco for its famine in Christmas trees. But eleven carloads came to town, while last year upward of forty carloads were disposed of. Saturday before Christmas in the wholesale market dealers were clamoring for trees and bidding against each other in their eagerness to secure them, running prices up on themselves. There are two reasons for the shortage. One is the scarcity of laborers in nearby country districts, and the other the timidity of shippers who feared the recuperating city would offer but a poor market place for Christmas trees. In past years this class of Santa Claus season greenery could be purchased at retail for from 50 cents to \$1 each. The wholesale selling prices this Christmas season ranged from \$1 to \$2.50 each, and the wholesalers were unable to fill 25 per cent. of their orders. Out at the Presidio, near Golden Gate, soldiers were stationed to guard their evergreen groves from Christmas tree seekers, and several arrests were made of the despoilers.

Our Cleveland correspondent states that a stroll through the various retail stores of that city reveals many interesting things; all are busy, with parties, decorations, etc., and they vie with one another in beautifying their places. All are unanimous in stating that, in spite of prevailing high prices, this year's business shows an increase of 50 per cent. over last year's at Christmas time.

NAPHTALIN AGAINST PLANT ENEMIES.

By F. Ledien, Botanical Garden, Dresden, Germany.

(Translated from "Mollers Deutsche Gartner Zeitung," by G. Bleicken.)

Naphtalin is now often used as insecticide rather to keep insects away than to kill them, for it has been demonstrated that insects do not alight, and furthermore will not lay their eggs, where a strong smell of naphthalin prevails.

For this reason I would at present only recommend experiments against such insects as have ability to move about quickly; for instance, the troublesome fly upon the mushroom beds, or the asparagus bug, the fly that produces the fine thread worm in hothouses which destroys so easily orchid seedlings and other germinating plants, the white azalea moth, etc.

In France they use naphtalin against the cockchafer. The mixture consists of 1000 kilo, naphtalin (2000 pounds), 8 hektoliter of sawdust (1 hektoliter equals nearly 100 quarts), and 500 kilo. of sulphate of lime (1000 pounds). This is enough for about six acres and costs in Europe about \$40. The strong odor prevails nearly fourteen days and is sufficient to keep away the female during the time of egg-laying. To be economical, one must, of course, use it at the exact time of the egg-laying of the cockchafer.

As we know, there exists a multitude of plant diseases, spread by flying insects, and often due to the insects themselves. Whoever will find an economical use of naphtalin against them should certainly achieve big results. Sander & Sons, of St. Albans, England, last summer used naphtalin against thrips in orchid houses and against everything else which crawls or flies. Mr. Sander said to me that "even the frogs tumble over."

Upon a portable stove a tin sheet is heated, and at a distance of five to ten steps a quantity of naphtalin is poured upon it and evaporated. Care must be taken not to have the least particle fall into the stove; also the work must be done very rapidly, as no human being can long endure the gas following the evaporation of the naphtalin; the house must be shut up for several hours afterwards. The exact portion of naphtalin to be used for a specified space remains to be found out by experiment; but as the

stuff is very cheap and the results obtained very lasting the expense need not deter free experimentation by anyone interested in the subject.

NEWS NOTES.

Eugene Haenlin will soon start in business in Oneida, N. Y., on Glenwood avenue.

Miss Eda Burn, Nashville, Tenn., has moved from Church St. to 107 Eighth Ave., N.

Murray Patterson has purchased the business of E. A. Feters, 275 Woodward Ave., Detroit, Mich.

The basement of the Music Hall Market, Boston, has been leased by T. F. Galvin Corp., for a storeroom.

W. A. Seger, Jr., is the manager of the Mullanphy Flower Co. doing business at 2439 N. Grand Ave., St. Louis.

W. D. Chase of Chase & Son, New London, O., drilled for water and in addition unearthed a fine vein of copper.

A petition has been presented to the three park boards of Chicago to increase the wages of gardeners to \$75 a month.

A. Schmidt withdraws from the Riverside Floral Co., with the opening of the new year, and will be located at his new houses in Riverside, Ill.

The bid of E. R. French for the erection of a horticultural building at the Exhibition Grounds, Toronto, Canada, has been accepted by the Board of Control; price \$90,000.

Benj. Hammond is sending out a neat pocket calendar which contains also an identification slip, weather signals, interest laws and other information briefly stated for the busy man.

Misses Julia and Susan Wood of Muskegon, Mich., have purchased the two greenhouses at Ben Mac Dhui, the country estate of Rev. Dowie, the self-styled Elijah. They will be moved to their fruit farm at Valley View.

The fifteenth announcement concerning garden pupils, for January, 1907, has been received from the Missouri Botanical Garden. Young men desirous of becoming gardeners should send for a copy. They will find it very interesting.

W. L. Rementer, late of Lansdowne, was in Philadelphia last week visiting his old friends. He is now in a good position and doing well. He intends soon to branch out again on his own account. Family differences were the main reason for giving up the old business.

OBITUARY.

George Gunderman, landscape gardener, died on January 7, in Pittsburgh, Pa., aged 88. One daughter survives him.

Alex. J. Park of South Chelmsford, Mass., died at his home on December 30. He is survived by a wife, two daughters and a son.

Frederick Vervaene, landscape gardener, died at the home of his daughter in Bridgeport, Conn., on December 30, at the age of 70.

Charles Barton, night watchman at Wessling's greenhouse, Minneapolis, Minn., died on December 26, from injuries received by the explosion of a lantern.

Miss Clara Eaton Cummings, Hunnell professor of cryptogamic botany at Wellesley College, died recently in Concord, N. H., after an illness of several months.

Jerome Bock, who for the past fifty years has been a nurseryman in Burlington, Ia., died in that city on December 22, at the age of 84. Three daughters and a son survive him.

Patrick Smith, well known as a landscape artist and gardener, died at his home in South Bethlehem, Pa., on December 28. Mr. Smith was born in County Fermanagh, Ireland, on March 7, 1833, and for thirty-seven years has been a resident of South Bethlehem.

INCORPORATED.

A new company, of which D. Fuerstenberg is president, Eugene Bernheimer secretary and H. C. Geiger treasurer, has been formed under the name of The Florex Gardens, and fifty acres of land purchased at North Wales, Pa., 22 miles from Philadelphia. They have found that the damp atmosphere from the Delaware river at Edgely, where the Floral Exchange greenhouses are located, is not conducive to the best growth of American Beauties, and they will grow them in this new location, where they expect to erect a house 150 feet wide in one span by 425 feet long, covering over one and a half acres, and stock it with 40,000 Beauties. The house will be of truss construction. Tea roses will still be grown at Edgely. George Samtman, late of Myers & Samtman, will be superintendent of the new place.

Aristocrat, Beautiful cerise, Leader of all carnations. Mar. 1st delivery—\$12.00 per 100. \$100.00 per 1000. **Red Riding Hood**, Scarlet, \$12.00 per 100. \$100.00 per 1000. **White Perfection** and **Daybreak Lawson**, \$6.00 per 100. \$50.00 per 1000 and many others ready now. There are no better cuttings than ours. Stock is clean and healthy. The quality is guaranteed. Order from reliable people and get what you want. There is nothing too good for the florist.

We grow nothing but the best varieties.

CHICAGO CARNATION CO. JOLIET, ILL.
A. T. PYFER, Manager.

SEED TRADE.

The New York Times' humorous account of the encounter between Hon. John Wesley Gaines and William Wolf Smith and their "squirrel-house" chase of one another in the revolving doors until both were exhausted has been going the rounds of the country for the past two weeks. Ridicule has ever been a most potent weapon, and many brazen free seed supporters now resort to explanations and apologies to justify their advocacy of it. In short, they are on the defensive, and how long they will hold out depends on the vigor of the attack. Mr. Smith, in a communication to the New York Tribune of the 5th inst., refers to a suggestion of Dr. Galloway of the Department of Agriculture, in which the doctor advocates a plan for spending the money which he seems to assume Congress is eager to appropriate. This shows that the doctor has seen a light, as a year ago he made himself ridiculous by telling the Agricultural Committee of the House how necessary the Seed Bureau was in guiding and regulating the seedsmen of the country. As may be supposed, the numerous "Professors" in the Department are all actively opposed to its discontinuance and are doing more or less lobby-

John Waterer & Sons, Ltd.

AMERICAN NURSERY

BAGSHOT, ENGLAND

have the finest stock of recognized **Hardy Rhododendrons, Azaleas, Andromedas**, high class Evergreens and specimen Conifers. Ask for special list of plants grown for the American trade.

John Waterer & Sons are the great exhibitors of Rhododendrons in London.

ing as occasion gives them opportunity.

Batchelor's Seed Store, Utica, N. Y., has been incorporated with a capital of \$5,000. The officers are: Charles F. Saul, Syracuse, N. Y., president; D. M. Ross, Syracuse, N. Y., secretary-treasurer, and the directors are Judge Wm. M. Ross, Syracuse, N. Y., Charles F. Saul, Syracuse, N. Y., and A. C. Langdon, Utica, N. Y. A new store has been rented and a prosperous and largely increased business may be safely predicted for the firm.

A Correction.

In seed trade notes in issue of December 29, page 722, referring to the "man not afraid of work," the lines should read, "and to prove it he lay down with his hoe in a weedy cornfield," etc. Also in the first column the word "where" instead of "when" should follow Indianapolis. In the last column "energetic" should be "energetically."

CATALOGUES RECEIVED.

Johnson Seed Company, Philadelphia Pa. Garden and Farm Manual for 1907. Has a striking cover in colors and a very extensive and interesting novelty list. The same firm also sent out a wholesale price list for winter and spring of 1906-07.

The Northampton Nurseries, Northampton, Mass., Thomas Foulds, superintendent. Descriptive catalogue of hardy ornamental shrubs and border plants.

In a case which was tried in 1898, a man bought an orchid at an auction for £21, with a warranty that it was a "Cattleya Acklandiae alba, only known plant." It did not flower for two years, and then produced not a white but a purple flower. The real value of the plant was 7-6. In an action for breach of warranty the judge found as a fact that if the orchid had been an actual alba it was at the time of sale worth £50; but that until it showed its real nature there was no probability that an orchid grower would give more than twenty guineas for it. Upon this finding it was held that the buyer was entitled to judgment for £50, and not merely the twenty guineas he had paid.

STATEMENT OF PLANT IMPORTS.

There were entered at the port of New York from December 18, 1906, to January 7, 1907, inclusive, the following plants, etc:

From Holland—H. F. Darrow, 4 cs. plants, 11 bales seed; McHutchison & Co., 16 cs. plants; P. Ouwerkerk, 21 cs. trees; Stumpp & Walter Co., 22 bales flower seed; J. M. Thorburn & Co., 105 bales sundry seeds; Vaughan's Seed Store, 2 cs. roots, 16 bales seeds; sundry forwarders, 71 cs. plants, 6 cs. roots; sundry consignees, 3 cs. plants, 1 cs. bulbs.

From Belgium—H. H. Berger & Co., 5 cs. bulbs; McHutchison & Co., 16 cs. plants; Chas. F. Meyer, 5 cs. bulbs; Stumpp & Walter Co., 3 cs. plants; Vaughan's Seed Store, 2 cs. plants, 8 cs. bulbs; sundry forwarders, 5 cs. plants, 5 cs. bulbs.

OUR CREDIT SYSTEM: ITS USES AND ABUSES.

By S. S. Skidelsky. Read before the Florists' Club of Philadelphia Jan. 1, 1907.

I deem it an honor as well as a privilege to address you upon a subject that, it seems to me, has never received the consideration it merits, either at the hands of our numerous florist clubs or of our national society.

It is no exaggeration to assert that there is no body of men, more honorable, more honest and straightforward than our florists. It is a noteworthy fact, one scarcely requiring any proof, that during the panic of 1893, when business conditions were most deplorable, when the stringency of the money market and the general stagnation and business depression were most appalling in their consequences, when the professional calamity howlers and the unscrupulous demagogues aired their theories to their hearts' content, thereby adding fresh oil to the already kindled fire of fear and discontent, when the so called "first laws" of self preservation began to assert themselves in a manner that brought disaster and financial ruin to many a business house, our florists, as a body, be it said to their everlasting glory and credit, put their shoulders to the wheel that much the harder, never thinking of joining the procession of bankrupts. It is an actual fact—and I challenge anybody to disprove it—that there were less failures, in proportion, among the florists, either compulsory or otherwise, than among any other body of business men. I could easily name a number of florists, who during these memorable dark days, saw fit to deprive themselves and their families of things generally considered as absolute necessities, in order to meet their obligations.

Men capable of such self sacrifice, men possessed of such moral stamina, of such business integrity and honesty of purpose need not hesitate inscribing their names upon the roll of honor. Perhaps Pope had some gardener in view when he said that "An honest man is the noblest work of God." Of course, there are exceptions, but of these later. That much for our honesty and business integrity. Can we claim as much for our business methods, or, to be more exact, for our credit system, as compared with that of other progressive business men? Hardly. While it is true that we are keeping pace with the times in many other respects, while we are advancing steadily and uninterruptedly along

lines of general progress, increasing our facilities, modernizing our stores and our greenhouses, improving our products, while we have been exchanging views and opinions as to the best methods of marketing our products, going even so far as to touch upon the ideal employer and employee, it has never occurred to us to consider seriously the means and ways and the best methods of modernizing our credit system. A question of momentous importance to our own interests, strange to say, seems to have escaped our attention. Viewed from whatever standpoint and whatever arguments we may bring to bear upon the subject, it is undeniably true that our credit system is in its primitive state, lacking those sound fundamental principles which are at the base of every sound financial or industrial institution. It is said of the late Marshall Field, the merchant prince of two generations, that his first step, at the very outset of his brilliant business career, was to establish a sound credit system. A rule from which he never deviated and which, perhaps more than any other factor, was responsible for and contributed so largely towards his colossal fortune, was to collect his outstanding accounts and to meet his own obligations upon maturity. What is true of Marshall Field, the merchant prince, holds equally true of John Smith, once upon a time the struggling market gardener, whom we now see making rapid strides along the highway of progress. The reason? Easily explained: "I pay as I go," says Mr. Smith, "and in order to be able to do this, I collect all my accounts promptly". Simple enough in itself, yet a rule of this sort seems to constitute the cornerstone, the very foundation of one's success.

"To pay as one goes" does not imply, however, spot cash transactions. Such a modus operandi is no longer tenable under our present business conditions. Nor is credit as such, to be despised or condemned on general principles. On the contrary, credit well regulated and judiciously used is a blessing and a privilege that can scarcely be overestimated. Were it not for this privilege, I venture to say, there are many among us to-day who should never have achieved the success they enjoy. How often do we hear of the man, who in years gone by had made his first start in life by building his first little greenhouse on a paltry few dollars, borrowed from either friend or shark, stocking it with a few geraniums and other truck, obtained on credit from some reputable establishment or other? If we trace

the history of the successful florist of to-day, we can see at a glance that credit has in a large measure contributed towards his success. I say "in a large measure" advisedly, because other qualifications, such as hard work, perseverance, will power and energy, were of equal importance as a means to his successful business career.

I reiterate—credit is a privilege that is not to be despised by any business man, no matter how conservative in his enterprises or how determined to steer clear of debt. Broadly speaking, it is credit, inspired by confidence and backed by enterprise, that is responsible for the remarkable development of our natural resources—the wonder of the world. It is credit inspired by confidence, that is accountable for the prosperity which we enjoy to-day. Credit has been the means of launching many a successful industry, giving employment to hundreds and thousands of men; credit has been the means of enabling many an individual to stem the tide of adversity and to rise to affluence and wealth. The struggling market gardener of a few years ago should have never perhaps become the successful grower of to-day if it were not for that blessed privilege—credit. I will go further and say that credit has been the means whereby most of our modern, mammoth greenhouse establishments have come into existence.

Credit, coupled with hard work, energy and business integrity, has made it possible for the enterprising man of to-day to achieve his success in much less time than it took the florist of a generation ago by the slow "pay as you go" process in its literal sense. We are progressing so to speak, in a geometrical ratio, by leaps and bounds, as it were, no longer satisfied to let "well enough alone", no longer content, like the immortal Micawber, to wait until something turns up. We must create our own opportunities and we are doing it to our heart's content, thanks to that blessed privilege—credit. If there is anything to be turned up we are generally inclined to take a hand in the turning process ourselves. We seem to realize that faint heart never won success; hence fear and hesitation no longer keep us in check. If we are determined to "get there" it is seldom indeed that we fail in our object.

But all good things have their limitations, and what is beneficial or wholesome in some cases often produces the contrary effect in others.

Assuming that credit, well regulated and judiciously used, is a privilege,

SOUTHERN WILD SMILAX

We are booking orders now for future delivery for Fancy Holly and Beaven's Fadeless Sheet Moss. Write for Samples.

E. A. BEAVEN, Evergreen, Ala.

that the strictly honorable and enterprising business man cannot fail but make the most of, it becomes an absolute menace—and often to a business community at large—when placed at the disposal of the unscrupulous trickster. To illustrate my idea: I know of a florist in the West, doing a thriving business, who seems to take especial delight in defrauding his creditors. He buys everything in or out of sight, in Holland, Belgium or New Jersey, throwing his goods on the market at prices compared with which those of his legitimate competitors seem prohibitory. Here is a case of credit misapplied, the result proving detrimental not only to the man sustaining a direct loss, but to the florist in the immediate vicinity as well.

I will cite another case. There is a florist in one of the Middle States who makes it a practice to order every new seedling carnation in sight. Unlike the careful, ultra conservative grower who pays his bills and who, as a matter of course, wants to know something about the variety offered, the man I speak of orders indiscriminately on the principle of "something to gain and nothing to lose," never paying for the stock. The season following he offers rooted cuttings at a reduced price, underselling the very man he victimized, thus doing him a double injury. And yet, despite such instances (I could cite many others), despite the fact that tricksters, under the assumed names of florists, are encroaching upon the legitimate trade in a manner most injurious to our common interests, in our anxiety to outdo our competitors, to swell our volume of business, we are inclined to take chances, we fail to discriminate, to draw the line most rigorously, as it needs to be drawn, between those worthy of our confidence and those who should be blacklisted in letters so large and conspicuous, that he who runs may read.

CUT FLOWER MARKET REPORTS

The market continues **BOSTON** fairly strong on roses but is rapidly weakening on carnations and violets. Bulbous stock is coming in fair quantities including the first crop of yellow narcissi. On the whole the supply and demand in the cut flower trade is pretty nearly balanced just now, one of the few times in the year when the wholesaler is able to clean out daily receipts without any conspicuous sacrifices.

Like a dream the holidays are now part of the **BUFFALO** great past. Everybody has had enough social enjoyment to be willing to enjoy simple life for a short time at least and now entertainments are only scattered sparingly through the calendar. The florists are having a slight recreation as the past week business was quiet. The inclement weather kept the shoppers home and made stock in some lines plentiful. Carnations came in in abundant supply and prices were somewhat at a decline. Select Teas still seem to be scarce and prices hold firm while ordinary enough to satisfy all. Violets are coming in good supply and fine quality, also selling better since prices lowered. Floral work was much in evidence and cleaned up a good portion of the surplus stock at the end of the week.

The usual phlegmatic **CHICAGO** condition which generally comes about after holidays was very much in evidence the past few days, and stock in all lines with exception of select quality roses was much in advance of demand. Beauties of select quality have held strong. Large numbers of this flower coming in show very poor foliage, owing no doubt to dark, soft weather which has existed almost continually for some weeks. New Year's trade, both shipping and local, was rather behind expectations, the cause being attributed to high prices which carried on from Christmas, although the continued scarcity of stock prevented surpluses from showing to any extent. Violets have been moved freely. Late receipts show an indication of a more plentiful supply of this flower coming on. Poinsettias are still to be seen in large numbers and with light call. Numerous local concerns have grown this flower in large quantities the past season, and as a result the same was rather overdone, although fancy stock was placed well for Christmas and New Year's and at good prices. The unfavorable weather which we have had for some days has put a damper on local retail business, and it is hoped that a good cold spell will come about and stimulate trade somewhat.

The prices of this **CLEVELAND** week on cut flowers remains the same as last week and Christmas. While the weather is much warmer, there is no sunlight, and the cut is very limited. However, the market is receiving some very fine Richmond, Chatenay, Bridesmaid and Bride roses, and good carnations.

The holidays are over; **COLUMBUS** but I am very glad to be able to say that a much firmer, and higher, steady grade of prices have continued since. As regards quality of stock, every one here, in common with the rest of the trade, have been at times much bothered to get even passable stock. There has been no sun in this vicinity since the first of December. I think some, say, fifty hours altogether will cover it. What we need now is some good, clear and bright winter weather, and trade will continue in fine volume. An especially active business, at good prices, was done by all on New Year's day.

Trade is keeping up very **DETROIT** brisk and everybody is steadily busy, there having been little opportunity given anyone thus far to get rested from the holiday rush. The supply of cut flowers is still far below the demand.

New Year's Day **INDIANAPOLIS** brought quite a little extra demand and by night the market was pretty well cleaned up. The demand for choice material for corsages was quite in evidence as well as decorations for balls and dinners. Since New Year's the market opened at a decidedly lower level of prices although roses are holding up well in view of the largely increased supply. Beauties are in fine quality and fairly good supply. The quality of Bride, Bridesmaid, Killarney and Richmond is excellent in spite of the fact that we have had no sun. Carnations are good but not in over supply. Violets have been in short supply since Christmas. Callas have become quite plentiful, but Harrisii are not abundant. Paper White narcissus and Roman hyacinths can be had in any quantity while tulips and daffodils are in limited supply. There is a fair call for green goods in bunches rather than strings.

The story of the cut-
NEW YORK flower business since the holidays is a bald and uninteresting narrative. As might have been expected, it has been dull and at times lifeless, but yet the accumulation of surplus material has not attained anything like the proportions of that of some previous like occasions, and quoted prices are more uniform and unyielding than the weak market conditions would seem to jus-

tify. The unseasonably warm weather of the past week has had an injurious effect on the quality of roses and carnations, but better conditions are now in sight. Bulbous stock begins now to obstruct the market as usual at this season.

Business last week **PHILADELPHIA** was pretty fair for an after-holiday rush. Prices continued reasonably firm and there was no serious glut in any one line. Beauties were, as anticipated, in shorter supply, but the demand also slackened so that prices hung about normal. Bridesmaids were a little off color, and fancy stock was in demand. Brides were plentiful and good. Two new things made their appearance in the rose market, namely, Myers & Samtman's new light pink which looks very much like an improved Testout and Leonard's cross between American Beauty and Liberty, which looks more like a red La France than anything else. It has only the tea fragrance and the usual pale silvery "turn-over" of La France. That is only superficial, of course. What this rose may do as a cropper and seller is still in the future. Both these novelties, we are assured, are good sellers—but only as novelties. The carnation market is well supplied with good flowers. The prices are about normal. Orchids are better and more plentiful than ever before, but the improved taste of the public keeps pace and no slump is in sight. White laelias, cattleyas and cypripediums are especially noticeable at present. Violets are still in rather short supply. Paper Whites and Roman hyacinths are going unusually well. Plumosa scarce; smilax too plentiful; poinsettia is plentiful and good yet, and the prices have improved; it will be a staple for weeks yet. Poinsettia has not been a money-maker except for the retailer this year. Mignonette is steadily improving. Jonquils and single daffodils are coming in in limited quantities. Freesias are extra good this year. Too much lily of the valley; much of it poor.

PERSONAL.

J. Fonta has been appointed superintendent of Audubon Park, New Orleans.

Visiting Boston this week: S. A. F. Secretary P. J. Hauswirth, Chicago; George C. Watson, Philadelphia; Martin Reukauf, Philadelphia.

Samuel Murray and Arthur Newell of Kansas City, Mo., are going to the City of Mexico next week to assist in making President Diaz a "Shriner" and to see something of Mexico's tropical scenery.

CRAFT AND CRAFTSMAN.

An address before the Gardeners' and Florists' Club of Boston, by W. H. Wyman.

(Continued from Page 733.)

The possibilities that lie in a block of marble are seen to those only who have eyes to see. In that block of marble the sculptor sees, in dim outline, a form; it grows more beautiful as he meditates, until, at last, a creation of graceful mould and of angelic expression stands visible to the eye, for the liberation of which he devotes his energies. Days lengthen into months and months into years; but he is unmindful of them so intent is he on his work. No; that is not the word,—it is work, but that does not express it. It is rather the giving expression of himself—it is a travailing of soul, a mental birth. The product of his genius is almost a thing of life. It was in the block of marble, was it? Yes and no. To the one man, yes, to the other man, no. More exactly, it was in the mind of the one, it was not in the mind of the other, until the one had revealed it to the other.

So it must be in every field of human activity—the boy, yes, the man, must see visions and dream dreams, always with his eyes open. The merchant lived in that poor boy we saw some years ago back there on the farm. We did not see him—the merchant—but the boy we saw was looking him squarely in the face all the while. We saw the boy,—it was Abe, or Jim or Dan—but Abe saw Abraham Lincoln (and as a young man he confessed as much) striking the shackles from million of slaves. Jim saw James Garfield meeting the unexpected in whatever turn it took; the spirit was living within him waiting for the occasion. The occasion came and he was there, because Jim was acquainted with James and knew he could be depended upon in an emergency. The old saying is quite true, "the boy is father of the man". The principle holds good in every craft or avocation in life, and it holds good because it is true, and only because it is true.

The man who would succeed in this department of human activity must understand well the external elements with which he has to deal; he must see the possibilities vested in a tiny seed—the possibilities in a stretch of wild unbroken landscape or a mound of broken rocks. The gardener must have the imagination of the poet, the fine discrimination of the artist. He must not only produce the material, but he must see that the material is arranged so that there shall be no "war among the roses"—no clashing among the flowers. We have all been in gardens where there was a profusion of beautiful flowers, looked at individually, and yet there was, in reality, little if anything, to admire. On the other hand we have visited gardens where there were only a limited number of plants, of very common sorts, and we were enchanted by them; common everyday plants and flowers—but so beautiful! They all seemed made for each other, and were so arranged that they were a harmonious feature of the landscape, each one doing duty to the whole.

We have not far to look for the reason for all this. It is that which in one woman makes her never well-dressed even if she is clothed in silks

and adorned with diamonds. It is that which makes another woman well-dressed even if the fabric grew in the fields of Alabama, and was woven in Lawrence, and unadorned with pearls. On this line we might continue indefinitely; but it is not necessary. Is it necessary for me to say that the shepherd must love his sheep—the gunner must love his gun and the plantsman must love his plants. Let us now turn from the work to the workman himself. The sordid question of dollars and cents concerns all of us; for food, shelter and raiment we must have. But the man who never gets above and beyond the money standpoint of his calling never gets far toward success in the highest degree.

It is the man who becomes engrossed in his work and thinks not of the pay, who is doubly paid. The genius in his craft is the man who has so much in his soul seeking expression that, work hard as he may, he never quite catches up with himself. There is more yet seeking expression and he rejoices at every new day for the opportunity of working out that which is pleading for expression from within. A sense of duty well done is in itself a rich reward, and he who does his full duty is sure of substantial remuneration. Elbert Hubbard says "Folks who never do any more than they get paid for, never get paid for any more than they do."

Look over the whole catalogue of trades and professions and tell me which one has a broader range of subjects than has your calling. Contrast your breadth of vision with that of those who toil in our factories. The factory operative stands before a machine year after year doing the same thing, no better, no faster, than he could do it at the end of the first six months of his service there. His movements are almost as automatic as are those of the machine, of which he seems to be almost a part. Dangers are so many that his mind must be constantly on his work. He cannot think of other things. Not so with you—your work invites thought deep, long-continued and profound. The book of nature always open before us invites our thought. And the more thoroughly we read out the thought of nature, the more nearly right we are doing our work. But it must not be forgotten that nature reveals no secrets to those who think they know it all.

Victory gives fresh zest to the victor on every field of conflict. And so as thoughtful men advance they find no day hanging heavily on their hands—they are borne on by a mighty rushing tide of events. The days are all too short—the seasons pass too quickly. The man had been toiling but he knew it not, for he had not watched the hands on the dial, but nature for her secrets—thinking after God his thoughts. Such craftsmen may grow infirm of body because of advancing years; but never does the man grow old. He grows rich and reverent and profound. Hundreds of such noblemen we have seen. No priest at the altar deals with anything purer than the flowers—the handiwork of God—and he who has part in their creation should feel the dignity of his calling so that none should be found more childlike in straight-forward simplicity than he. We must not forget that

there are some exceptions, and in some instances, as in Latin, sometimes we thought the exceptions were more general than the rules. How out of place a man of low designs and unbridled passions in a bower of fragrant flowers. How a man of coarse unwholesome speech disfigures the landscape. The true man sees purity in the dew-drops, hears music in the wind as it plays in the branches above his head, and breathes the fragrance of the flowers.

The craft elevates, refines and ennobles the craftsman in this your chosen field; it cannot be otherwise. Let me be not misunderstood; I am speaking of the real craftsman—the man inside the clothes we see—whom the world can never see only as he is revealed by the work which he does. It may not be true of all gardeners or of all florists that they are pure in character, chaste in speech and temperate in habit, but it is true of many of them. They are among nature's noblemen. Not all who paint pictures are artists; not all who build houses are architects; not all who play on musical instruments are musicians; but those who paint pictures that survive are artists; those who design massive structures, which combine strength, grace, and beauty for the happiness and convenience of man, are architects; and those who compel the organ to give forth such melodious sounds as to convulse our natures and make the best there is in us war with the worst there is in us, are musicians. What great work of art can the world produce that was inspired by the sordid stuff we call dollars? Not one. The inspiration came from a higher plane. When once a man becomes absorbed in some great and noble undertaking, he wakes to a realization of the fact that he is experiencing the happiest moment of his life. Business is not all sordid and mean. It is what we make it. Your craft is, in character, what you make it. The highest ideal known to man is service. He who serves his fellows most faithfully is himself most faithfully served. He that sows sparingly reaps sparingly.

And in closing let us look for a brief moment at the scope of your labors. You may possibly have moments when you take a narrow view of the worth of your calling. You may see the flowers wither and decay, the vegetables eaten and gone, and you may say there is no permanent value as a result of your toil. But if that were all, it was no mean thing. The flowers served their purpose, they gladdened human hearts, they brought sunshine into many a sick chamber. The vegetables you produced gave nourishment and health to busy workers of hand and brain. Their work could not have been done as well but for your work. This is the near view of the situation. There is a broader outlook. Coming generations will eat fruit from the trees your hands have planted long years after you are gone. Thousands and tens of thousands of earth's weary sons and daughters will sit beneath the strong arms of the oaks and the elms and the maples that you have planted and refresh their wearied bodies. Happy child life will voice a psalm of praise to their unknown benefactor.

Soon your name may be forgotten

POT MAKERS FOR 140 YEARS

A. H. HEWS & Co. Inc.

CAMBRIDGE, MASS.
KINDLY EVERWARE FLORISTS

but your work will long remain. In a measure it will be true of you as it was of those who fell at Gettysburg, whose great work was summed up in a few well-chosen words by President Lincoln, "In a large sense we cannot dedicate, we cannot consecrate, we cannot hallow this ground. The brave men living and dead, who struggled here, have consecrated it far above our power to add or detract. The world will little note nor long remember what we say here, but it can never forget what they did here."

But this is not all, trees, like fruits and flowers, have their day. The end comes sometime. The fashion of this world changes. Is there nothing more permanent that you have done? Yes, for many of you have changed the very face of nature. You have taken a rough unsightly stretch of country and converted it into a veritable paradise of beauty. With pick and shovel, instead of the palette and brush you have wrought out a picture, a dream of beauty, which will be more and more highly prized by men and women for a thousand generations. But does not this mark the end of the sphere of influence of your craft? By no means. The great soul of the artist lives forever in the souls of men inspired by

his touch. Shakespeare said, "The evil men do lives after them, while the good is oft interred with their bones," and as truthfully can it be said of great and good men in every walk in life that the good men do lives after them. Your life and mine in the final analysis will be worth just what good we can do, the service we can render in our time. This is the great goal of life, the prize to be coveted, the end to be sought.

AUCTION SALE

The undersigned will sell on Thursday, January 17th, 1907, at 10.30 o'clock in the forenoon.

Owing to a change from horse to electric power, I have concluded to dispose of the entire contents of my stable consisting of the following stock and plant, to wit:

Ten business horses; 8 delivery wagons; 2 double sets of harness; 6 single sets of harness; 2 sets of road harness; 1 fast trotting mare, record 2:14 1-4; 1 bay road mare, Standard Bred; 1 pair of spotted ponies, wagon and harness; 1 brown saddle horse; 3 surreys; 1 natural wood trap; 3 runabouts; 1 depot wagon, new sulky built by Toomey; 1 Brewster brougham.

All carriages have rubber tires. A lot of wagon and stable blankets, halters and stable utensils, etc. The above mentioned stock and plant will be sold at public auction at the stable in the rear of No. 250 Fifth Avenue, known as No. 3 West 28th Street, Borough of Manhattan, New York City. By order of CHARLES MILL-ANG, (Florist).

... OUR ... CARNATION NOVELTIES —For 1907—

Winsor, White Enchantress and Helen M. Gould

ONE way to judge carnations is to see them on the exhibition tables. A better and more convincing way is to see them growing; therefore we cordially invite all carnation growers to visit us and judge for themselves regarding the superiority of the above-named sorts.

Our carnation houses are at **Scarborough-on-Hudson**, (not Tarrytown). Friends who desire to visit us can take the N. Y. C. & H. R. R. R. from New York. Trains leave there every half hour. Scarborough is the first station north of Tarrytown. Our grounds adjoin the station, and the greenhouses are about five minutes' walk from the station.

We are growing **25,000 plants of Winsor** for cut flowers, alone, for the New York market this season, which shows the faith we have in it. This will also enable visitors to see it growing in quantity, and besides that, will give us enough plants to get a great abundance of fine, healthy cuttings without over-propagating. We have already booked a large quantity among the large growers, and anticipate for this variety the largest sale of any new carnation that has ever been distributed, as large growers who have seen it are enthusiastic in regard to its value. Those who have seen it have immediately placed large orders for it, so we recommend those who have not ordered to place order without delay, so as to insure early delivery.

For full description of these three valuable novelties, see our wholesale price list. Of course, we shall have all of these varieties on exhibition at Toronto, where they can be seen, and where they will speak for themselves.

Wholesale Prices Rooted Cuttings Spring, 1907

WINSOR.—Soft silvery pink. The best color, best keeper, best shipper, best seller—best every way. \$12.00 per 100; \$100.00 per 1000.

WHITE ENCHANTRESS.—Has the large size, long stem, productive habit of Enchantress, but is pure white. \$12.00 per 100; \$100.00 per 1000.

HELEN M. GOULD.—A beautiful sport of Enchantress. Ground color lovely shade of silvery pink, with very fine pencilings of carmine, making an exceedingly exquisite combination. While on close observation this variety is variegated, the general effect is one beautiful tone of dark pink. Exceedingly valuable, because it combines the earliness, freedom, long stem and large size of Enchantress, giving another color possessing all the other desirable qualities of Enchantress. \$12 per 100; \$100 per 1000.

BEACON.—Orange-scarlet. A vigorous, healthy grower, of ideal habit. A profuse bloomer, with long stems. \$12.00 per 100; \$100.00 per 1000.

ARISTOCRAT.—Cerise-pink. Will be planted largely in place of Lawson. \$12.00 per 100; \$100.00 per 1000.

MELODY.—Daybreak sport of Lawson, about the same color as Enchantress, but much brighter, and does not fade like Enchantress. Also a much better keeper and shipper. Those who grow the Lawson varieties exclusively will find this very valuable and desirable, because it gives an improved Enchantress color, which is so popular, and at the same

time can be grown in the same house with the other Lawsons. An extra fine thing in every way and in great demand. A great addition to the Lawson class. \$10.00 per 100; \$75.00 per 1000.

ROSE PINK ENCHANTRESS.—A sport of Enchantress. Color, dark rose pink. \$7.00 per 100; \$60.00 per 1000.

WHITE PERFECTION.—A novelty of 1906, and a variety for which there is a great demand this season. A third larger than Lady Bountiful and a more perfect flower. \$6.00 per 100; \$50.00 per 1000.

VICTORY.—Scarlet. This is giving great satisfaction, being a free blooming, profitable scarlet. \$6.00 per 100; \$50.00 per 1000.

RED LAWSON.—A fine red. Our stock of this is superior to many stocks of Red Lawson that we have seen. \$4.00 per 100; \$30.00 per 1000.

VARIEGATED LAWSON.—The most productive of the variegated sorts. A favorite. Outblossoms Mrs. M. A. Patten. \$4.00 per 100; \$30.00 per 1000.

WHITE LAWSON.—An excellent white. \$4.00 per 100; \$30.00 per 1000.

LADY BOUNTIFUL.—Pure white. \$4.00 per 100; \$30.00 per 1000.

ENCHANTRESS.—\$3.00 per 100; \$25.00 per 1000.

MRS. M. A. PATTEN.—\$3.00 per 100; \$25.00 per 1000.

MRS. THOS. W. LAWSON.—\$3.00 per 100; \$20.00 per 1000.

J. W. HOWARD - Somerville, Mass.

MABELLE

NEW PINK CARNATION FOR 1907

COLOR—A peculiar shade of lovely pink, with a faint yellowish cast; several shades lighter than the Lawson. Unlike most Pinks, the brightest sun does not injure the color. **SIZE**—3 to 4 inches in diameter when established. **ODOR**—Pleasing, but not strong. **STEMS**—Invariably strong, but always graceful, ranging from 12 to 30 inches during the season. **HABIT, etc.**—A very quick, active grower, making specimen plants in a short time, even from late cuttings. On account of its rapid growth, requires supporting very soon after benching. Gets away rapidly, blooms early and gives long stems right from the start. **PRODUCTIVENESS**—Prodigious is the best word we know of to use here. It is the most incessant bloomer early and late, we have ever grown. **Stock limited. Delivery January 5th to 10th and later.**

Price \$12.00 per 100, \$100.00 per 1000

Odontoglossum crispum

A correspondent wishes to know how our plants came through the past hot summer—a very reasonable and pertinent request—and as many have asked, it is thought best to answer through the medium of HORTICULTURE.

The preceding years had been very favorable to summing the plants; the heat being less than usual and rains frequent, many gave credit to these conditions for the improvement seen in the collection, and it certainly did help materially. We find, however, that the sun the plants enjoy from October to April builds up strong tissue in the bulbs and leaves, these becoming bronzed by the exposure even the smallest bulbs producing bloom, and the plants go through the heat as never before when confined to structures that did not admit much sun in winter. This seems to be the key to success in odontoglossum culture; other aids are also beneficial, as the use of the Cookson formula in the water all the time, using osmunda fibre of the brown grade alone for potting material, leaving out moss altogether unless it can be made to grow green.

Last year a dozen more plants were tried again with oak leaves properly prepared and mixed through the fern root, but these all showed signs of distress in summer, not one keeping up with the vigor of their previous years, so we think this system of potting pretty well exploded. When one comes to learn of the large quantities of osmunda roots sent to England for use there of late, and the success attending its use when properly tested, we begin to believe that the best possible potting medium is at our hands at first cost.

The following clipping taken from the November issue of "Orchid Review" is worthy of reprint here; the writer, Mr. J. Mackay, is the orchid expert in charge of Mr. Chamberlain's famous collection and is writing of a noted trade collection as follows: "We next visited the odontoglossum house; and on entering remarked on the fine healthy appearance of the plants; they had just recently been potted in osmunda fibre, surfaced with moss, and from the vigorous appearance of the young growths this material is to be recommended as a potting medium. I have had occasion to use it largely in conjunction with polypodium fibre this last two years and find it suits the cattleyas, laelias and hybrids, dendrobiums and odontoglossums, so much so, that peat and leafy soil are now seldom used. Mr. Mansell * * * is quite in raptures with this material and predicts a great future for it as a compost for orchids."

The writer was among the first to use the roots of Polypodium vulgare over twenty years ago, where, in Ireland, large mats of it could be torn off the oak trees, about three inches thick and pure brown fibre, so that it is similar in texture to our osmunda, except that it is entirely free from earthly particles. The writer above notes that the combination is suited to all the genera cultivated here excepting the cypripedes, which perhaps do better than any others in it.

In the same issue of Orchid Review we note that even English cultivators have been sufferers from the hot

weather last summer. They might copy with advantage the use of a jet of cold water, sprayed through the walk with pressure into a fine mist. A half-inch pipe is run along the floor with a valve at the entrance door and a nozzle screwed on such as used for spraying roses, adjustable and the spray regulated by turning it round. This arrangement keeps the temperature 20 degrees cooler than outdoors. When it reads 95 degrees we have 75 degrees with a circulation of air with it that keeps the foliage moving gently; this is turned off at night, and costs about 5 cents a day for water consumed. We began by using the nozzle on the hose, but at times this would squirm and portions of the house and plants become drenched before we were aware of it.

Our only failure to be recorded is the loss of all the seedling odontoglossums. We had one that was a year old, and this with all raised from seeds sown last spring seemed to melt away during the hot months. We are now experimenting wholly with the Mexican odontoglossums crossed with or on to the more sensitive Colombian species, and hope in time to attain a measure of success. It appears that the large trade growers here are again taking up the culture of cool orchids in thousands, and are succeeding well, the flowers moreover finding a ready market; thus the art of cultivating these most beautiful of flowers which once was on the decline, has rapidly been improved upon and bids fair now to assume as large a proportion as the collectors can guarantee for over here we still have to depend on importations to supply the plants. These are becoming scarce in the older localities; there are plenty more places doubtless which a resident could locate, but in these days of "quick trips" exploration is impossible on the part of the collector.

E. Cooper

About Carnation Britannia

Editor of HORTICULTURE:

Dear Sir—We notice your remarks in your issue of Dec. 8th, with reference to the carnation Britannia.

Doubtless you Americans regard with suspicion a variety raised this side, and perhaps with good cause, when you have so many grand things in your country.

However, we have in Britannia a sort which includes all good qualities of the American varieties, and is in addition, we believe, superior to any American scarlet yet sent out.

At any rate we are prepared to back it against either Victory or Robert Craig, and we believe these are the two best American sorts of this color.

These three varieties were shown at the first meeting of the Winter-flowering Carnation Society and Britannia came first with flying colors, receiving also the gold medal of the society for the best variety in the show.

Britannia is absolutely a non-burster, and we are producing more of this variety than of either Victory or Robert Craig.

Yours faithfully,

Hugh Bowden

Chrysanthemums

THE MARKET SHOW.

On the 12th December last there was held in the Foreign Flower Market at Covent Garden a chrysanthemum show that would probably appeal to many American florists. Organized by the National Chrysanthemum Society, it is entirely different from the ordinary shows of the society and is intended to display the popular flower from a purely commercial standpoint. We see none of the big show blooms we meet with at the ordinary exhibitions and there is but little attempt at artistic display in the arrangement. Most of the exhibits are medium sized blooms of such varieties as can be easily sold in bunches and they are chiefly if not wholly set up in bunches on tables.

Names of prize winners will be of no use to American readers, and the show need only be superficially treated there being almost a monotonous repetition in every case of the way in which the flowers were staged.

Twenty classes were provided for collections of 12 blooms, for bunches of singles, for plants, for yellow, bronze white, pink and crimson marked chrysanthemums in three vases each, for the best novelty, for packed boxes and for memorial designs.

Some of the chief varieties represented were Old Gold, Frank Hammond, Mlle. Therese Pankoucke, Winter Cheer, Nagoya, Mrs. F. Judson, Pink Victoria, Yellow Thompson, Cullingfordi, Phobus, Buttercup, Guy Hamilton, Exmouth Crimson, all in the large flowering sections.

Singles were staged in considerable variety, there being in several of the collections Earlswood Beauty, pale yellow; Mrs. D. B. Crane, pink; Clibran's Yellow; Kitty Bourne, yellow; Lily, a large creamy white; Winnie Wells, yellow; Sylvia, bronze; Earlswood Beauty, pink; Pet, rosy pink; Ryecroft Belle, lilac purple, etc.

In the special class for whites, Mlle. Therese Pankoucke, Heston White, Mrs. J. Thompson and Guy Hamilton were all freely shown.

Messrs. Cragg, Harrison and Cragg had a fine display, the best in their mixed collection being Mlle. Louise Charvet, Mlle. Therese Pankoucke, Mrs. G. Beech, a noble yellow incurving Jap., Frank Hammond, Yellow Thompson and many more. Mr. Prickett, an old grower, had another mixed collection in which decorative and other varieties were freely shown. Mr. P. Ladds, a large market grower, had some fine samples of Framfeld Pink, Mme. Paolo Radaelli, Violet Lady Beaumont, etc.

The show excited a good deal of interest and many visitors besides market men were present.

More About Fences

Mr. Editor, permit me to add my endorsement to the remarks of Mr. Cameron anent the fence question in your issue of Dec. 8. It is timely, particularly so from the standpoint of a gardener. The members of that craft as a rule have hitherto held their opinions to themselves more than they should regarding things pertaining to civic beautification. We gardeners erroneously assume that our whole burden of responsibilities should be confined to the narrow limits of a greenhouse and its immediate surroundings, content to shine at times in the garden periodicals by illuminating their columns with our respective erudite knowledge of greenfly and aphid punk lore, etc.

By association and training there are none better qualified than gardeners to have a say in matters concerning suburban and city landscape harmony. It is belittling on our part not to take part by word at least, if not by deed, alongside those that are doing valiant work in obliterating pest-holes as well as eye-sores, by their well-directed efforts in arousing to action the indifferent larger portion of the community.

If the ordinary sedate fence has aroused the ire of friend Cameron, what says he about the chromo-bespattered fences that are so hideous and plentifully met with everywhere? Nor should our respective opinions be confined to fences; let everything unsightly be handled without gloves. My specialty, Mr. Editor, while friend Cameron takes care of the fence, will be to draw attention to the foul-smelling, slime-begirt, ramshackle pile-wharves, that have done, for so many years, and are still doing duty for this historic and esthetic city of ours.

There is nothing in my opinion that detracts from a city in dignity and refinement, and impresses the stranger more unfavorably at first sight, than a chaotic, nondescript frontage on the water. It certainly is not calculated to impress the visitor with lofty ideas as to the esthetic and enterprising proclivities of the people that are responsible for such unseemly conditions. It has also a direct anomalous bearing on other municipal undertakings in proportion to the excellency of the latter as the case may be. For instance, the park system radiating from the outskirts of the city and extending away into the distant suburbs is justly a source of great pride to Bostonians, not only for their ampleness, but for their artistic and substantial layout, which will become more apparent as years roll by. Thus, then, a well-regulated balance of civic improvement is upset, as one outstrips the other beyond comparison.

Anthuriums

Aroidous plants are a prominent feature in tropical vegetation and naturally have found a large place amongst cultivated plants; they have suffered, however, from that comparative neglect which has overtaken old-fashioned stove plants, due partly to the heavy cost of fuel and the demand for specialized plants of serviceable value, which admit of cooler treatment.

Alocasias, caladiums and many others in this important group are certainly of a very fragile character, hardly adaptable for the ordinary rough experiences of exhibit life; anthuriums on the other hand, with a more robust constitution are specially fitted for conservatory and outside purposes. Many of the green foliage varieties will stand with advantage a much cooler treatment than is usually given; these have a preference for a cold bottom stage and thrive in an intermediate temperature. The variegated varieties such as Warocqueanum and crystallinum require much warmer treatment and more careful watering, especially in winter.

They all respond to rich culture and it is only in fully developed specimens or in grouped masses planted out that their decorative value is brought out; a well grown plant of *A. Veitchii* with its elephant ear-like leaves, often 6 ft. in length, is a truly noble subject and gives distinction to any mixed group. *A. Scherzerianum*, known as the Flamingo plant, with its greatly improved varieties, is perhaps the most popular of the section; its bright spathes show up splendidly by electric light. *A. Andreanum*, always a favorite, has also been immensely improved. *Atro-sanguineum*, a deep brilliant crimson, is specially fine and a much larger spathe than the type and ornamented with a golden yellow spadix, shining as if varnished. *Album* is a counterpart of the type with shining ivory white spathes. *Roseum*, a rosy pink with a tri-colored spadix, the base being white, the centre golden, the tips green. The numerous large leaved varieties, such as *Ferriense* and *eburneum*, though fine as specimens where room is no objection, are not to be compared with the types above mentioned in beauty and general usefulness. If symmetrical plants are desired they must have ample space and be constantly turned round and kept clean, each leaf being neatly staked in position; the flower stalks should also be tied to thin green-painted stakes, immediately the spathes unfold. For the production of large foliage and superior spathes there is nothing finer than dried cow dung mixed with sphagnum moss and tied in a neat sloping mound up the stem, supplementing this with a weekly watering of liquid manure during growth. The general compost should be of a turfy character; the green-leaf varieties prefer a larger amount of loam and the variegated ones soil of a pasty nature with charcoal, sand, moss and good drainage; they take a shaded position, ample syringing during growth with plenty of water at the

roots. It is interesting to note in this connection how the leaves of this class are adapted with a broad surface to catch the water, carrying it in a circle round the plant where the absorbent parts of the roots are in a state of nature. They are easily propagated and seed freely, which is often the result of insects walking over the microscopic flowers on the spadix; old plants may be cut down and the stump will yield a goodly number of suitable cuttings for years to come. In commending anthuriums to a more rich and careful culture, it may be said they are worth doing well; the fresh leaves are decidedly ornamental, the spathes last from two to three months on the plants and five or six weeks when cut if kept in water. The whole group bear their beautiful spathes in the dull winter time and onward to the end of August.

Edgar Elvine

Potash for Carnations

Editor HORTICULTURE:

Dear Sir—I would like to ask some questions. You say that carbonate of potash is good for carnations. What proportion do you use in a gallon of water or can it be used in powder form sprinkled on soil? If so, how much to a square foot? Please answer through your paper.

Yours truly,

X.

Potash is good for carnations. The form that it is in, whether carbonate, muriate or sulphate, makes but little difference to the plant. The sulphate of potash, however, seems to give slightly better results on most plants. Sulphate and muriate of potash can be readily secured, as they are on the market as fertilizing material. The carbonate of potash is not readily secured, as it is not generally used as a fertilizer and its cost would be out of all proportion to its fertilizer value.

The salts of potash are soluble in water and thus lend themselves readily to application in liquid form. If this form of application is desired use from 1-4 to 1-2 pound of the salt to 50 gallons of water (approximately a barrel) and apply to 100 sq. ft. of bench surface. If desired the potash salt can be added to the ordinary liquid manure, at the rate of 1-4 pound to 50 gallons of the liquid and apply to 100 sq. ft. of bench. These applications can be repeated every ten days or two weeks to rapidly growing plants. You can use the potash salt in the dry or powdered form if so desired. Use the same amount as in liquid application, 1-4 to 1-2 pound to 100 sq. ft. of bench area and scratch in. Care should be taken to get an even spreading over the entire area.

case of a local organization. The ownership of valuable property is one of the strongest bulwarks of any institution, giving a guarantee of permanency and assuring the support and respect of men of means and influence always. Any community big enough to maintain a horticultural society or florists' club is sufficiently progressive to make an intelligently selected land investment remunerative in time. Wise investments of this character years ago were the basis of the present great wealth of many influential institutions now widely known which, without this foresight on the part of their founders, might have dropped out of existence long ago. No florists' club can make a mistake if it will thus provide itself with a home which need cost it no more now than would the rental of hired quarters and which after a period of years would become a valuable holding.

In his inaugural address before the Massachusetts Horticultural Society, President S. M. Weld called attention to the possible advisability of reducing the number and amount of cash prizes to be awarded at the exhibitions and the giving, instead, of more medals, certificates of merit, etc., as is more the custom among the successful horticultural societies abroad. This is a proposition that is likely to develop considerable discussion, as sharp differences of opinion on the subject are known to exist not only in the domain of the Massachusetts Society, but elsewhere and wherever horticultural shows are given. The spirit of emulation stimulated by the love of horticulture for its own sake has not yet reached in this country the strength which it has attained in the older European centres, and it will take time to bring our American exhibitors up to that standard where the honor of excelling is a sufficient inducement to striving for it regardless of any direct cash return, but it is well to try to stimulate this sort of competition, for where it prevails there the best and healthiest horticultural progress will be found.

Most clubs and societies start their official year with their January meeting. New officers are being installed and all are promising unflagging zeal

in the positions to which their friends have elevated them. As to the success which they will achieve much depends upon the manner of their start. An oft-expressed sentiment is that when a candidate has been fairly elected to an office of responsibility it is the duty of all members to rally loyally to his support, burying all pre-election differences and partizanship and working shoulder to shoulder in the common cause. It is equally essential that officers after their election should be governed by the same sentiment. When, as is usually the case, on motion of their late rivals, the courtesy of a unanimous vote is extended, it becomes their duty to accept it in good faith and to deal with unvarying impartiality with all members regardless of past affiliations. Nothing can go farther in making an official popular than the following out of this rule of conduct, while the adoption of the opposite tactics will surely help to write the word "failure" across the record of any administration. There are many things that tend to prosperity in an organization, but the greatest of all is Harmony.

Whatever may be the prevailing opinion as to the practicability of a permanently located "home" for our roving national societies the desirability of such a possession cannot be overestimated in the

Building for
the future

Parcels Post

HORTICULTURE has from time to time called attention to the abuses practiced by express companies. It is apparent that no improvement can be looked for in the present service unless heavy pressure is brought to bear upon the companies, and one of the most formidable weapons is the parcels post. Flourish this over an express official's head and see how quickly he'll begin to argue about the detrimental influences this would have upon the country.

A parcels post means the authorizing of the post office department to carry packages up to a certain weight—eleven pounds, for instance. So afraid are the express companies that such a thing will come to pass that they are doing all in their power to prevent the passage of such an act. John Wanamaker was asked when he was postmaster general why we didn't have a parcels post, and he answered, "There are four inseparable reasons, the American Express Company, the Adams Express Company, the National Express Company, and the Wells Fargo Express Company."

Nearly every other civilized country has a parcels post and the successful operation of these is one reason why we should have such a system. What the Swiss, the Germans, the English, and even the Mexicans, can do, we Americans can accomplish. The advantages of a postal system are to be found in the saving in charges and the greater convenience.

From England an eleven pound package can be sent to India for 72c. In Germany the same sized parcel can be sent forty-six miles for 6c., or fifteen hundred miles for 12c. These two illustrations are typical. And when we learn that England's gross post office profits was \$25,000,000, after handling 120,000,000 parcels, and that Germany benefitted to the extent of \$13,000,000 after carrying 150,000,000 packages, we need not worry about our government going into bankruptcy.

In support of the statement that it would be more convenient, I need only say that there are about 74,000 post offices against 30,000 express offices. In country districts the benefit cannot be lightly estimated.

To further the idea of a parcels post California has formed a Postal Progress League which is doing a great work in the disseminating of information and in awakening the people to a realization of the benefits to be derived from it. Great credit is especially due Mr. Edward Berwick of Monterey.

We cannot get a parcels post in a minute, but everyone should make it a point to get his neighbor interested. By informing the representatives to Congress and by a universal stirring up, something must eventually be gained. Either the express companies will be brought to time or we shall gain a much needed department.

The express companies don't want it of course. But the question is who should profit—the vast majority of the people or a handful of men who make a monopoly out of a necessity? Let us unite on this question and Democrats, Republicans, Socialists and all strive to bring about this much needed reform.

R. S. Adams.

Dwarf-Growing Perennial Phlox

The majority of the dwarf perennial phloxes are natives of the mountains of our country. They are beautiful in color and are easily cultivated, being especially adapted to grow in rock-gardens and as edging plants. Their multitude of flowers add a fresh glory to the spring. The native phloxes are very nearly allied, so that the same general cultural directions may suffice for all. Well-drained soil and sunny exposure are essential. Although hardy, the alternate freezing and thawing in mild winters is harmful to them, and young plants should be propagated yearly to fill up gaps in the patches. As the plants do not seed abundantly they have to be increased by cuttings. These may be taken in summer when branches begin to harden and set in sandy soil in frames, where they can be shaded from strong sunshine. They root soon and will become good plants the following season. With large patches, soil of sandy nature may be worked in amongst the branches and if this operation is done in the summer the creeping branches form roots and may be planted where needed. The plants can also be multiplied by division. The following are the best for cultivation:

Phlox amona, Sims. Will thrive in poor clayey soil and is a pretty little phlox of spreading habit and rose-colored flowers in late spring or early summer.

P. bifida Beck. An elegant plant with pale purple corolla.

P. divaricata L. (Syn. *P. canadensis*). Its native home is in moist copses and woods. It grows about one foot high, and is adorned with lilac-purple flowers in summer.

P. ovata L. (Syn. *P. carolina*). With its dark green foliage and nice showy flowers of a rosy shade, it is especially adapted for moist borders.

P. pilosa L. This species is 10-12 inches high. It is a lovely plant, seldom seen in gardens, with umbel-like clusters of flesh or rose-colored flowers more than 1-2 inch in diameter, appearing from June to August.

P. reptans Michx. In gardens best known under the names of *P. stolonifera* and *P. verna*. This species has deep pink-purple flowers and round obovate, often smoothish leaves, and running habit. Very useful for the rock garden.

P. stellaria A. Gray. A nice rock-plant of graceful appearance and white flowers in spring.

P. subulata L. Variable in form and color. There are not many more valuable plants for the flower garden in spring than this rich flowering, evergreen and mosslike species. It is dwarf and neat, forming elegant cushions in borders or brilliant mats over rocks.

Carl Blomberg

NEWS OF THE CLUBS AND SOCIETIES

NEW YORK FLORISTS' CLUB.

The first meeting of this club held on Monday evening, January 14, will long be remembered by those who were present, for its many incidents of unusual interest.

President Totty was duly installed and his inaugural address was of a high order of merit, being short, to the point and replete with inspiring suggestions. He disclaimed any desire to make innovations or deviate from the policy of his predecessors, urged the value of closer sympathy between the club and kindred societies, more especially the S. A. F., and recommended that the matter of the acquirement of property for a permanent home for the club be taken up in a practical way. Referring to the comparatively small representation of private gardeners in the membership he advocated an active campaign to bring the gardeners to a realization of the great value to them of this organization. He expressed regret at the loss of bowling prestige in recent years. Following the president, vice-president Monda, secretary Young, treasurer Wheeler and trustees Scott and Sheridan were severally called up and made brief remarks promising the best in them for the service of the club for the coming year.

President Totty appointed the following standing committees: legislative, O'Mara, Sheridan, Hallock; essay, Wallace, Scott, O'Mara; awards, Duckham, Butterfield, J. Manda, Hurrell, Turner, Pye, Hoffmeyer; exhibition, Jas. T. Scott, Guttman, C. Weber, E. Dailedouze, Weston; outing, nine members with F. H. Traendly as chairman; house and entertainment, Nugent, W. Rickards, Schultz; dinner, John Scott, Birnie, Sheridan. Special committee on closer relations with the S. A. F., Wallace, Sheridan, Birnie, Traendly, John Scott.

The report of the retiring treasurer, C. B. Weathered showed a balance of over \$2000 in cash. Resolutions of sympathy on the death of Mrs. E. V. Hallock were adopted unanimously. Election of a trustee to succeed C. H. Totty resulted in the choice of John Donaldson by a good plurality. The proposed amendment to the by-laws, placing the treasurer under bonds, was referred to the board of trustees.

At this point W. F. Sheridan took the floor and in a most appropriate and feeling speech presented to C. B. Weathered who had served so faithfully as treasurer for nearly twenty years, a beautiful solid silver service as a token of appreciation and esteem from members of the club. Mr. Weathered's response was from the heart and the reception accorded him left no room for doubt as to the place he holds in the hearts of his fellow-members.

Next in order was a little talk by secretary Hauswirth of the S. A. F. urging a closer affiliation and asking that the membership be largely increased in New York. He made an earnest plea in behalf of the proposed national flower show to be held in Chicago. Secretary Hammond of the

American Rose Society followed with an eloquent presentation of the coming meeting and exhibition of that society at Washington next March and expressed the hope that the high standard reached at Boston last year might be maintained. President Simpson of the Rose Society made a few remarks in a similar vein stating that special premiums from New York friends would be gladly received.

On the exhibition table were vases of carnation Beacon from Peter Fisher and of *Cypripedium villosum* and insigne in many beautiful types, from E. J. Norman, Lee, Mass., a plant of a new salvia, nana compacta, from F. G. Mense and of *Moschosma riparia* from Wm. Duckham and of flower pot hanger from W. C. Krick. The awards committee reported a cultural certificate for Mr. Norman's *cypripediums*.

TARRYTOWN HORTICULTURAL SOCIETY.

The eighth annual dinner of this society was served to upwards of sixty members in the Florence Hotel, Wednesday evening, January 9. The tables were tastefully decorated with carnations, sweet peas, A. Farleyense, *Asparagus plumosa* and *Sprengerii*. The F. R. Pierson Co. contributed fine vases of carnation Winsor. George Saltford of Poughkeepsie showed several blooms of a monster pink carnation seedling, each bloom measuring four inches or more. A marked feature is its fine serrated petals and full center; it may best be described as a carnation poppy. Among the many talented visitors were W. A. Ely, who ably officiated as toastmaster; District Attorney Young and Surrogate Millard. F. R. Pierson told of the good work accomplished by this society wherever horticulture was the issue throughout the United States. He said that the society had a financial credit of nearly \$1,000, and hoped in the near future the permanent fund would be strong enough to carry it independent of annual collections. J. Austin Shaw lauded the horticultural press in good form, and requested to be allowed to talk on Ladies at the next banquet.

DAVID McFARLANE, Cor. Sec.

NASSAU COUNTY HORTICULTURAL SOCIETY.

The annual meeting was held on the afternoon of January 8, with President A. McKenzie in the chair and a large attendance. The winners of the monthly point competition for the year 1906 were announced as follows: gold medal, S. J. Trepass; silver medal, H. F. Meyer; bronze, A. Mackenzie. On monthly point competition, A. Janack, 95; S. J. Trepass, 88 1-3; H. F. Meyer, 86 2-3. Winner of prize for 100 single violets, Ed. Boulon & Son; 18 carnations arranged for effect, H. F. Meyer; 12 carnations arranged for effect, V. Cleaves; best flowering plant, Chas. Lenker with *cypripedium*. It was decided to have the second annual dinner on January 30. Thomas Harrison, J. Duthrie, Chas. Bertanzel, A. Johnson and Wm. Maher are the executive committee.

J. W. EVERITT, Secy.

ST. LOUIS FLORIST CLUB.

The meeting of this club on Thursday afternoon, January 10, will go down into history as a memorable one. The meeting was held in the new quarters in the Burlington Building, President Irish in the chair, and about forty members and visitors present. The report of the flower show committee was read by Secretary Beneke, showing that \$2540 had been subscribed toward the guarantee fund. Opposition was developed, and some lively parliamentary tactics were set in motion, but the president's ruling sustained the committee. The next meeting, February 14, will be in conjunction with a carnation show, the trustees being authorized to secure a hall and appropriate \$50 in prizes. The treasurer's report showed a healthy balance. A vase of a new white seedling carnation was shown by Swan Peterson, under number 127, and received an award of 85 points. A. F. Longgren, salesman for the Chicago Carnation Company, was a visitor. The meeting closed with lively discussions of topics from the question box.

CINCINNATI FLORISTS' SOCIETY.

There was a fair attendance at the meeting held Saturday evening, Jan. 12. It was a smoker, and the topic of the evening was a big flower show to be held in Cincinnati this coming fall. The directors of the society will hold a special meeting next Saturday to formulate a schedule and talk the matter over.

The B. K. and B. Floral Co. of Richmond, Ind., had a couple of vases of new seedling carnations, which were greatly admired. Superior is the cognomen, a pink of the Lawson shade. It scored 88 points. Sarah A. Hill, a white, scored 87 points. Both varieties will be on exhibition at the coming convention. Messrs. Adrian, Shwarz and Deller were the judges.

Visitors—Chas. Knopp, Richmond, Ind., S. J. Heider, Hillsboro, O.

MORRIS COUNTY (N. J.) GARDENERS' AND FLORISTS' SOCIETY.

The eleventh annual smoker of the society was a howling success. About 140 members, friends and guests were here to bear witness. We had a short business meeting. A vote of thanks was given to F. R. Pierson Co., for a magnificent vase of Winsor carnation and to A. J. Guttman for a fine vase of Pink Imperial sent for decoration; both had been certificated previously. The curiosity of the evening was a large pan of *Moschosma riparium*, new to most of us, exhibited by Wm. Duckham. It was judged a valuable winter-flowering plant. It grows anywhere from 2 to 6 feet tall, a mass of minute white flowers completely covering the plants. It belongs to the Mint family and is aromatic. A certificate of merit was awarded. Four hundred and eight dollars and twenty-three cents was the balance left from last year.

The entertainment committee did themselves great credit. Every thing was informal and plenty of refreshments for everybody. The entertaining Rickard Bros. were on hand and

brought some of their friends; Harry A. Bunyard and Mr. Sperling from Stump & Walter Co. were there also. Wm. Turner, the genial Mr. Yoemans of the Monmouth County Club, Mr. Ross of the Tarrytown society, a delegation from Orange, Harry Turner all the way from Castle Gould, and H. L. Hand of Portchester were among our out of town friends. In local talent we were not wanting. Singing and merry-making went on until 1.30 a. m. when with a lusty three cheers for the Madison Club all hied home.

EDW. REAGAN, Secy.

CONNECTICUT HORTICULTURAL SOCIETY.

This society held its regular meeting in County Building on Friday, January 11, President Sternberg in the chair. It was Carnation night, and there was a large attendance of members. Splendid exhibits were tabled by F. R. Pierson Co., Tarrytown-on-Hudson, N. Y., and A. N. Pierson, Cromwell, Conn. Among local exhibitors were: John Coombs, florist, J. F. Huss, superintendent to J. J. Goodwin, and Carl Peterson, superintendent of the Whiting greenhouse, West Hartford.

The following awards were made by the judging committee: F. R. Pierson Co., for the fine new variety Winsor, diploma; for Helen Gould, Melody and Rose Pink Enchantress (as one exhibit), certificate of merit; A. N. Pierson, diploma for an unnamed seedling, which, under the electric lights, looked a rich, glowing scarlet. It is a fine, bold flower, with stiff, erect stem. Also a certificate of merit for an exhibit of Robert Craig and Rose Pink Enchantress. J. F. Huss and Carl Peterson were each awarded a certificate of merit for general displays of carnations. Mr. Huss read an instructive paper on carnation culture, for which he received a hearty vote of thanks. As a proof that the society is becoming a power in the community, seventeen new members were added to the roll.

Visitor, Ulysses G. Scollay, of John A. Scollay, New York.

ALEX. CUMMING.

AMERICAN SEED TRADE ASSOCIATION.

The Executive Committee met last week at the New Willard Hotel, Washington, and decided to hold the next convention at New York city. There were present President H. W. Wood, W. H. Grenell, J. C. Robinson, and C. E. Kendel, secretary, and by invitation Albert McCullough, Henry Nungesser, George S. Green, Vice-President C. S. Burge, Alexander Forbes, W. Atlee Burpee, and F. W. Bolgiano.

BUFFALO FLORISTS' CLUB.

A meeting of the Buffalo Florists' Club was held on Wednesday last; much business of importance being transacted. Several applicants were admitted to membership. A number of the members are going to attend in a body the carnation show at Toronto on January 22, leaving at 8 a. m. via T. & H.

NEWPORT HORTICULTURAL SOCIETY.

The Newport Horticultural Society held a meeting Tuesday evening, Jan. 8. President Butterton occupied the chair for the first time since the election. James Robertson and Samuel Speers found for themselves comfortable seats at either side of the president. After the reading of the minutes and the disposition of various other matters of routine character, the real business of the evening was gone into, which was the consideration of recommendations contained in a report made by the executive committee, which held a meeting a few evenings previously, these recommendations being that the Society hold two exhibitions in Masonic Hall during the year; that over \$1000 be paid in premiums; that the price of admission be 25 cents, instead of 50 cents, as it was last year at the Casino show; that the first show be held in June and the second in September; and that provision be made whereby music and dancing may be provided during the last evening of each exhibition. All the recommendations were unanimously adopted. It was voted to accept the offer of Professor Wheeler of the Rhode Island Experiment station to address the society on "Soda in the Soil, in Its Relation to Plant Growth," at a meeting to be held Tuesday evening, Jan. 22. The meeting will be open to the public and light refreshments will be provided for the occasion.

The Annual Ball.

In last week's issue of Horticulture we read that the Newport Horticultural Society's ball took place on Jan. 9. This ball was one of the best ever given by the Newport Horticultural Society—a ball where young and old abandoned themselves to enjoyment exclusively.

It is said that in Boston the gardeners are so impregnated with pious puritanism that such wickedness as dancing is looked upon as a scheme of Satan to lure those who participate in it to the abode which he has long ago prepared for them, but the Newport Horticultural Society held a ball in Masonic Hall, and about five hundred people were in attendance. Floor Director Daniel Coughlan and Mrs. Wm. Allan, Jr., led the grand march. Newport is a cosmopolitan city; for that reason the order of dances was made suitable for cosmopolitan dancers, although it cannot be denied that it was occasionally noticeable that the dancing was more composite than of any other character. The hall was decorated superbly with evergreens, wreaths, smilax and asparagus, with numerous bells besides. The stage was done with bay trees, palms and foliage plants, finished with a row of Lorraine begonias sent from the Hub by R. & J. Farquhar & Co. Myriads of electric lights peeped out from among the bays and palms. The committee of arrangements comprised Messrs. John T. Allan, Daniel Coughlan, A. Fraser, B. M. Anthony, T. B. Connolly, R. A. Smith, and the president. The reception committee, Dr. A. J. Anderson, James Robertson, Col. A. K. McMahon, J. Gibson, D. McIntosh, Aids, J. T. Allan, P. F. Reynolds, A. Christenson, J. J. Sullivan.

GARDENERS' AND FLORISTS' CLUB OF BOSTON.

The opening meeting of this prosperous organization for 1907 was held at Horticultural Hall, Boston, on Tuesday evening, January 15, and its importance as the initiatory meeting under the new president was accentuated by its being "Ladies Night" and the presentation of an interesting stereopticon lecture on Italian Gardens by J. K. M. L. Farquhar.

Retiring president Wheeler in vacating the chair to his successor spoke a few appreciative words thanking the members for their loyal support and the trade paper representatives for their help. President Westwood on being conducted to the platform delivered a short address in a manner which showed him to have all the qualifications of a good presiding officer. He referred to the rapid growth in membership in recent years and said that the time had now arrived for growth in education, instancing the remarkable success of the landscape gardening class as a forerunner of the coming activities and ambitions of the club and its members. He spoke of Jackson Dawson, J. A. Pettigrew and others as representing the best in American horticulture and asked for united support in making the coming year a notable one.

Secretary Craig gave some gratifying statistics as to the membership of the club and spoke felicitously concerning the progress of the past year. He stated that communications had been received from three western States asking for information concerning landscape study. Treasurer Hatch reported a substantial balance in the treasury and in the landscape class fund amid long continued applause. William Downs was elected to the executive committee to succeed Wm. Nicholson who was compelled to resign on account of poor health. A vote of thanks was accorded the retiring president.

Mr. Farquhar's lecture was prefaced with two excellent recitations by Miss Grey, daughter of Thos. J. Grey. The lights were then turned off and Mr. Farquhar regaled his audience which completely filled the large lecture hall, with a series of pictures illustrating the architecture and gardens of Gibraltar, Naples, Pompeii, Rome, Florence, Venice, Milan, Genoa, Nice and Monte Carlo, giving an entertaining account of his recent visit to these beautiful places and describing the various styles of formal gardening which have prevailed during the past centuries. Then came refreshments in generous measure.

On the exhibition table was a fine vase of Beacon carnation from Peter Fisher, the new violet "Boston" from William Sim, cyclamens from S. J. Goddard, Lorraine begonias, immense specimens from Wm. Downs, and Lorraine superba from R. & J. Farquhar & Co., the latter bearing flowers of enormous size.

The State Florists' Association of Indiana held their annual meeting at the Commercial Club rooms, Indianapolis, on January 9, opening at 2.30 p. m. A dinner was served in the evening.

AMERICAN CARNATION SOCIETY

The sixteenth annual meeting and exhibition of this society will be held in the assembly hall of City Hall, Toronto, Ont., January 23 and 24, 1907.

Papers will be read at the meeting as follows:—

Are There Too Many New Carnations Introduced? by John Birnie, of West Hoboken, N. J.

Greenhouse Construction, by Mr. King, of Toronto.

American Carnations and Their Prospects in Europe, by C. Engelmann, of Saffron Walden, Eng., and Peter Riise, of Copenhagen, Denmark.

Carnations From a Canadian's Point of View, by Wm. Gammage, of London, Ont.

The Question Box.—This feature of the society is always open and members who have some knotty problem they want answered will kindly write the secretary, A. M. Herr, Lancaster, Pa.; their questions will be assigned the most competent member for an answer.

List of Premiums.

Class A. Open to all varieties, Seedlings or Standard Sorts.

No.	1st Prize.	2nd Prize.
1 Best vase 100 blooms White.....	\$10.00	\$6.00
2 Best vase 100 blooms Enchantress shade of Pink.....	10.00	6.00
3 Best vase 100 blooms Lawson shade of Pink.....	10.00	6.00
4 Best vase 100 blooms Scott shade of Pink.....	10.00	6.00
5 Best vase 100 blooms Scarlet.....	10.00	6.00
6 Best vase 100 blooms Crimson.....	10.00	6.00
7 Best vase 100 blooms Yellow Variegated.....	10.00	6.00
8 Best vase 100 blooms White Variegated.....	10.00	6.00
9 Best vases 100 blooms. Any other color.....	10.00	6.00

Class B. Open to all varieties disseminated prior to July 1st, 1906.

1 Best vase 50 blooms White.....	\$5.00	\$3.00
2 Best vase 50 blooms Enchantress shade of Pink.....	5.00	3.00
3 Best vase 50 blooms Lawson shade of Pink.....	5.00	3.00
4 Best vase 50 blooms Scott shade of Pink.....	5.00	3.00
5 Best vase 50 blooms Scarlet.....	5.00	3.00
6 Best vase 50 blooms Crimson.....	5.00	3.00
7 Best vase 50 blooms Yellow Variegated.....	5.00	3.00
8 Best vase 50 blooms White Variegated.....	5.00	3.00
9 Best vase 50 blooms. Any other color.....	5.00	3.00

Class C. Open to all varieties disseminated prior to July 1st, 1905.

No.	1st Prize.	2nd Prize.
1 Best vase 25 blooms White.....	\$3.00	\$1.50
2 Best vase 25 blooms Enchantress shade of Pink.....	3.00	1.50
3 Best vase 25 blooms Lawson shade of Pink.....	3.00	1.50
4 Best vase 25 blooms Scott shade of Pink.....	3.00	1.50
5 Best vase 25 blooms Scarlet.....	3.00	1.50
6 Best vase 25 blooms Crimson.....	3.00	1.50
7 Best vase 25 blooms Yellow Variegated.....	3.00	1.50
8 Best vase 25 blooms White Variegated.....	3.00	1.50
9 Best vase 25 blooms. Any other color.....	3.00	1.50

The American Carnation Society Medal.

Class D. A Gold Medal will be given

PRESIDENT JOHN H. DUNLOP

for the best vase of 100 blooms, any variety, any color.

A Silver Medal will be given for the second best vase of 100 blooms, any variety, any color.

A Bronze Medal will be given for the third best vase of 100 blooms, any variety, any color.

Special Medals of the Society of American Florists.

Class E. A Silver Medal will be awarded for the best vase of 50 blooms of carnations not yet disseminated.

A Bronze Medal will be given for the second best vase of 50 blooms of carnations not yet disseminated.

The variety to be in all cases of American origin.

Judges are to reserve awards in this class if in their opinion the exhibits are not worthy of the medals.

General Display.

Class F. Best general display of commercial carnations. No restrictions as to color—but variety must have been disseminated prior to April 1st, 1906. 50 blooms to be shown to a vase, and display is not to exceed twenty varieties. Vases from this collection are not allowed to compete in any of the other classes. First prize, \$50.00; second prize, \$30.00; third prize, \$20.00.

Special Prizes.

Silver cup valued at \$50.00 donated by the Canadian Horticultural Association for 6 vases of Carnations, 50 blooms in each; distinct varieties.

The Steele, Briggs Seed Company, Toronto, offer a silver cup valued at \$25.00 for 6 vases, 25 blooms each; distinct varieties. Montreal Gardeners' and Florists' Club, Montreal, Que., offers a cup valued at \$25.00 to the exhibitor making the largest display—all vases in all classes being counted as part toward this display.

The R. W. King Co., Ltd., Toronto, Ont., and North Tonawanda, N. Y., offer a silver cup valued at \$25.00 for the best 100 carnations in four varieties, four vases; competition restricted to the users of King's Greenhouses.

The H. Dale Estate, Brampton, Ont., offer a silver cup valued at \$25.00 for a vase of 100 blooms of the best carnation to be disseminated during 1907.

Cash will be paid for this prize should winner prefer it.

Jno. H. Dunlop, Toronto, offers \$10.00 (gold) for the best vase of white carnations, 50 blooms, distinct from other entries.

W. Gammage, London, Ont., offers \$10.00 (gold) for the best 25 blooms, pink seedling or sport darker than Enchantress and lighter than Lawson, never before winning a prize or medal. Those having preliminary certificates eligible. Entries for this prize will not be eligible to compete for any other prize.

W. J. Lawrence, Eglinton, Ont., offers \$10.00 (gold) for best vase 50 blooms not more than three varieties, open to growers having less than 20,000 feet of glass.

Jno. H. Dunlop offers \$5.00 (gold) for the best vase of 12 blooms carnations, open to private gardeners only.

George Vair, Toronto, offers \$5.00 in cash

for best vase of 25 bright red carnations, to be distinct from other entries.

The one and one-third fare (railroad concession) has been again secured, and every attendant is requested to use this certificate method and solicit the company of some fellow-florists from his vicinity so that the necessary one hundred certificates may be assured.

Carnation Registered.

By the Chicago Carnation Co., Joliet, Ill.—Beau Brummel. A large white overlaid with crimson on the order of Prosperity, having more color than this variety; a cross between a white seedling of our own and Harlowarden; an early, free and continuous bloomer, producing large, well formed flowers on good strong stems.

By Baur & Smith, Indianapolis, Ind.—Saint Nicholas. The brightest scarlet we have ever seen in any carnation, exactly identical with the geranium Trego in color. Does not dull in ageing. Large bloom on fine long and strong stem and very free. At its best during midwinter, but comes in early and continues late. Clean, vigorous, upright grower, with strong constitution. Both parents seedlings.

May.—A full shade deeper and brighter than Enchantress. Bloom of large size and well formed, opens up the center petals as soon as the bloom is unfolded. Good substance and never bursts the calyx. Stem of good medium length and as strong as Lawson. A fine, healthy grower and very free; comes in very early and never lets up until midsummer. Both parents seedlings.

ALBERT M. HERR, Secretary.
Lancaster, Pa.

WASHINGTON FLORISTS' CLUB.

List of prizes offered for the spring exhibition to be held in connection with the meeting of the American Rose Society, March 13, 14, 15, 1907.

PLANTS.

- No. 1—Indian Azaleas, six distinct named varieties, \$12, \$7, \$5.
 " 2—Palms, pair in pots or tubs, \$12, \$7, \$5.
 " 3—Ericas, six, not less than three species, P. Henderson & Co., \$5, \$3, \$2.
 " 4—Orchids, three plants, Mr. S. C. Briggs prize, \$8, \$5, \$2.
 " 5—Hardwooded greenhouse plants, two or more in bloom, azaleas excluded, \$7, \$3, \$1.
 " 6—Acacia, specimen plant, \$7, \$3, \$1.
 " 7—Hardy primroses and polyanthus, twelve plants distinct varieties, \$4, \$2, \$1.
 " 8—Cyclamens, ten plants in not over seven inch pots, \$10, \$5, \$3.
 " 9—Cyclamen, single plant, \$5, \$4, \$3.
 " 10—Cineraria, six varieties, \$10, \$5, \$3.
 " 11—Cineraria, specimen plant, \$3, \$2, \$1.
 " 12—Cineraria, stellata, six plants, \$10, \$5, \$3.
 " 13—Cineraria, stellata, specimen plant, \$3, \$2, \$1.
 " 14—Hyacinths, twelve named varieties, in pots, one in a pot, \$8, \$5, \$2.
 " 15—Hyacinths, six named varieties, in pots, one in each pot, \$4, \$3, \$1.
 " 16—Hyacinths, three pans not to exceed 12 inches, 10 bulbs of each variety in each pan, \$8, \$5, \$2.
 " 17—Hyacinths, single pan not to exceed 12 inches, 10 bulbs of one variety, \$4, \$3, \$2.
 " 18—Tulips, six eight-inch pans, nine bulbs of one variety in each, \$4, \$3, \$2.
 " 19—Tulips, three eight-inch pans, nine

- bulbs of one variety in each pan, \$3, \$2, \$1.
 " 20—Tulips, three 10-inch pans, 12 bulbs of one variety in each pan, Henry F. Michell Co., \$4, \$3, \$1.
 " 21—Polyanthus Narcissus, four eight-inch pots, five bulbs in each pot, distinct varieties, \$4, \$3, \$2.
 " 22—Jonquills, six pots or pans not exceeding eight inches, the number of bulbs in each left to the exhibitor, \$3, \$2, \$1.
 " 23—Narcissus, six eight-inch pots or pans, distinct varieties, single or double, \$8, \$4, \$2.
 " 24—Narcissus, three eight-inch pots or pans, \$3, \$2, \$1.
 " 25—Lily of the Valley, six pots or pans not exceeding eight inches, Henry F. Michell Co., \$3, \$2, \$1.
 " 26—Crocus, three ten-inch pans, three distinct varieties, \$3, \$2, \$1.
 " 27—Ixias, six pots or pans, distinct variety, \$3, \$2, \$1.
 " 28—Roman Hyacinths, six eight-inch pans, 10 bulbs in a pan, Henry F. Michell Co., \$3, \$2, \$1.
 " 29—Amaryllis, six pots, distinct varieties, \$8, \$4, \$2.
 " 30—Collection of Herbaceous Spiraeas, not less than three varieties, \$8, \$4, \$2.
 " 31—Display of Easter plants, bulbous plants with the exception of Easter lilies and Cyclamens excluded, \$20, \$10, \$5.
 " 32—Fern, any variety, that has been growing in a dwelling for at least four months previous to exhibition; open to amateurs only. John Clark, \$5, \$3, \$2.
 " 33—Rubber plant that has been growing in a dwelling for at least four months; open to amateurs only. Peter Bisset, \$5, \$3, \$2.
 " 34—Geranium, grown in a dwelling for four months, Geo. Field, \$5, \$3, \$2.
 " 35—General display of spring bulbous plants, all classes, \$20, \$10, \$5.
 " 36—Lilacs, six specimen plants, distinct named varieties, \$8, \$4, \$2.
 " 37—Hydrangeas, Hortensia section, three distinct varieties, \$8, \$4, \$2.
 " FLOWERS.

- No. 38—Carnations, vase of 100 cut blooms of one variety with foliage, Washington Florists' Club, \$6, \$4, \$2.
 " 39—Carnations, 25 blooms, any named crimson variety, \$4, \$2, \$1.
 " 40—Carnations, 25 blooms, any dark pink, Mrs. Lawson or darker, \$4, \$2, \$1.
 " 41—Carnations, 25 blooms, of any light pink variety lighter than Mrs. Lawson, \$4, \$2, \$1.
 " 42—Carnations, 25 blooms, of any

- named scarlet. Geo. H. Brown, \$4, \$2, \$1.
 " 43—Carnations, 25 blooms, of any named white variety, \$4, \$2, \$1.
 " 44—Carnations, 25 blooms, of any named yellow variegated variety, \$4, \$2, \$1.
 " 45—Carnations, 25 blooms of any named white variegated variety, \$4, \$2, \$1.
 " 46—Pansies, forty-eight cut blooms not less than 24 varieties shown in flat dishes, \$3, \$2, \$1.
 " 47—Violets, bunch of 100 blooms Lady Hume Campbell, \$3, \$2, \$1.
 " 48—Violets, bunch of 100 blooms of any other double variety, \$3, \$2, \$1.
 " 49—Violets, bunch of 100 blooms Princess of Wales. Chas. McCauley, \$3, \$2, \$1.
 " 50—Orchids, display of not less than six genera and fifteen named species and varieties, filling not less than twenty bottles.

Hybrid Geranium. Mrs. S. C. Briggs, \$5, \$3, \$2.
 Seedling Carnation, six or more blooms shown for the first time. Mrs. S. C. Briggs, \$5, \$3, \$2.
 Seedling Rose, six or more blooms shown for the first time, Mrs. S. C. Briggs, \$5, \$3, \$2.

For further information apply to the secretary, Charles McCauley, 18th and Kearney streets, N. E., Washington, D. C.

MONMOUTH COUNTY HORTICULTURAL SOCIETY.

The annual dinner of the Monmouth County Horticultural Society was held at Red Bank, N. J., on Thursday, January 10, at "The Sheridan," with one hundred or more members and guests present, among the latter being Messrs. Totty, Herrington and Schulz of Madison, and representatives of the various New York seed houses. Mr. Butterbach, the "father of the society," being absent on account of sickness, Mr. Herrington served as toastmaster on request of President-Elect Kennedy. An elegant repast, with many eloquent speeches and lively songs kept the company busy until about 2 A. M., and the evening was pronounced "the best ever."

QUEENS HOTEL, Toronto

Headquarters of American Carnation Society.

Carnation Winsor

We present in this issue two interesting illustrations showing this superb carnation as it is growing and blooming at the present time in the place of its nativity and in its later palatial home—localities two hundred miles or more apart. Strong adjectives have been used in describing Winsor but they are not overdrawn; great predictions have been made as to its future and they bid fair to be more than fulfilled. Its features and qualifications for commercial popularity as a grower and bloomer and as a cut flower are pretty familiar to the readers of HORTICULTURE because we have reverted to them frequently and the fact that, as indicated in our advertising pages herewith, Winsor is to be distributed by the F. R. Pierson Co., is a guarantee that every plant will be a good one. The following notes concerning Winsor, its birthplace and the man who raised it will,

WINSOR—Size Reduced One-Half.

no doubt be highly enjoyed by our readers:

Winsor and Its Birthplace.

BY THOMAS WHITE

Carnation Winsor which is neither a sport nor a chance seedling, but the result of judicious crossing and selection, came into existence in the greenhouses of Walter P. Winsor of Fairhaven, Mass., a town which, by the way, is rising "phoenix-like" from the ruins of the departed whaling industry, and which for a small town has contributed a goodly share to the attractions of the horticultural world. Among the trophies which have found their way to Fairhaven are the Hunnewell cup for best kept private estate, silver medal for introduction of *Saxifraga sarmentosa tricolor* and several cups and medals captured at New Bedford and Newport by James Garthly, gardener for H. H. Rogers, silver medal for introduction of *Dendrobium Burfordensis*, *Dendrobium Virginalis*

WINSOR

At Scarborough, N. Y.

and certificate for introduction of Carnation Winsor. Also, one silver, one bronze and three silver gilt medals for superior cultivation and display of orchids awarded to Peter Murray, gardener for W. P. Winsor, by the Massachusetts Horticultural Society. In addition to these may be mentioned anemone chrysanthemum Victoria,

raised by James Garthly, and *Adiantum Murrayanum*, raised by Peter Murray but which have not as yet been presented to the world.

Mr. Murray who is responsible for the appearance of the Winsor carnation, landed in Boston in the spring of 1888, a young man just out of his time and, like many another son of Scotia,

WINSOR

At Fairhaven, Mass.

with more in his head than in his pocket. After working for four years in Dedham, Mass., and Portsmouth, N. H., in 1892 he accepted the position as gardener for W. P. Winsor where genius has had ample opportunity to develop and as the above record shows, diligence has been crowned with success.

W. P. Winsor in whose greenhouses the carnation which bears his name was raised has been from his youth an ardent lover of horticulture and to him as proprietor is due credit for the introductions above mentioned as also for the medals and premiums awarded for excellence of many exhibits at the Boston and local exhibitions. For a number of years Mr. Winsor annually opened his greenhouses for a few days to an appreciative public; when many thousands of people enjoyed seeing his splendid collection of orchids and other choice greenhouse plants. In thus sharing with the less fortunate the results of expense and toil Mr. Winsor displays the spirit of the true horticulturist. Two years ago Mr. Winsor decided to give up his greenhouses and since that time Mr. Murray has conducted them upon a commercial basis on his own behalf.

CARNATION BEACON.

The name of Peter Fisher attached to a carnation novelty goes as far as columns of profuse praise. Beacon is a sterling scarlet and it is in the air all about that Beacon is expected to take the first place in its class as an all-round good grower and profitable producer.

The three houses shown in the picture were added during the past year to Mr. Haines' range at Bethlehem, Pa., and are filled with the three novelties, John E. Haines, disseminated last season, and Imperial and Pink Imperial, to be sent out this year. The general character and vigor of

JOHN E. HAINES

growth are so well shown in the illustration that little can be added here. Alex. Guttman of New York, who controls the sale of the blooms, states that the Christmas demand for these bright colored varieties far exceeded the supply obtainable. A number of other seedlings of much promise are also under cultivation and will be brought out in due time.

Mr. Haines started business twelve

years ago with a small house in which he grew lettuce more for pastime than profit; he soon began experimenting in carnation raising and found it so interesting that he gave up his entire time to it and the houses were added to from time to time.

The establishment is under the efficient supervision of William Mangan as foreman. Mr. Mangan for the six years previous to entering Mr. Haines' employ was on the estate of John Wanamaker of Philadelphia. Mr. Haines also has the assistance of his daughter, Mrs. George H. Weber, who takes charge of the books and correspondence.

NEWS NOTES.

A. N. Squire of Naugatuck, Conn., is moving from Maple St. to Church St.

Clare Haven becomes a partner in the Wildemere Gardens, Highland Park, Mich.

The greenhouse connected with the Country Club of Glenville, Ohio, was totally destroyed by fire recently.

Joseph Doyle, employed by H. A. Holton, Morristown, N. J., is laid up at the hospital with a fractured leg.

Wm. L. Hundertmark, Passaic, N. J., has filed a voluntary petition in bankruptcy. His assets are given as \$1,500, liabilities, \$3,000.

The M. & D. Artificial Calyx advertised in this issue is a cute little device that the carnation grower only needs to see to appreciate its value.

Mr. Mann has resumed his connection with the greenhouse on Washington St., Ipswich, Mass., for the past year under the management of Michael Burke.

H. H. Jahn, for thirty-seven years in business at 128 Broadway, Brooklyn, N. Y., has moved to 710 Nostrand avenue. The "opening" occurred on January 8, from 7 to 11 p. m.

Fred Miessel, Detroit, experienced a bad set-back through the bursting of one section of his hot water boiler during a cold night and it was with great difficulty that frost was kept out of the houses by smoking. Many plants were badly injured through this excessive smoking.

A meeting of the State Board of Agriculture was held at the State House, Boston, on January 9. The present board of officers was re-elected; Prof. Waugh urged a greenhouse survey of the state; the board recorded itself in favor of transfers of real estate of incorporated agricultural societies, "with the assent of two-thirds of the members present and voting," and the announcement was made of a conference of the agricultural boards of the New England States on March 8.

HOUSE OF IMPERIAL, PINK IMPERIAL AND JOHN E. HAINES
At Bethlehem, Pa.

SPLIT CARNATION FLOWERS.

Improved methods in growing carnations and the introduction of improved varieties have not as yet mitigated to any great degree the provoking habit of the divine flower of producing malformed blooms, commonly termed "splits." How to mend these flowers so as to enable the dealer to

BEFORE MENDING.

obtain as high a price for them as possible has no doubt engaged the best thoughts of not a few carnation specialists. Split carnations are likely to be a product of every carnation growing establishment for some years to come, and what careful cultural

AFTER MENDING.

methods fail to accomplish while the blooms are developing on the plants must be provided for after they are cut. The clumsy method of applying a rubber band around the calyx is open to serious objection and makes the buyer suspicious that the flowers

THE PINCERS.

are not fresh. A little device has been recently invented, and a patent applied for by the inventor, A. J. Baur, which it is hoped will fill these requirements. It consists of a little

wire clip which serves to hold together the two broken edges of the split calyx, in natural position, bringing the petals into the arrangement that they would have occupied had the calyx not split. The accompanying illustrations give a good idea of the device mentioned. The first two illustrations are photographs of the same flower of Mrs. Thos. W. Lawson, before and after mending. The wire clip, being made of galvanized wire, is almost invisible against the color of carnation foliage. The third picture shows a wooden model of the pincers used in applying the clips. The device will be on exhibition at the Toronto Carnation meeting. See the full-page advertisement in this issue for further description of this useful little device.

WHOLESOME CHESTNUTS.

Now is the time to make as accurate a calculation as possible of the stock required for spring sales or for planting; growing year after year quantities of stuff for which there is little or no demand is about as futile as giving house room to old leafless plants that can never be of satisfactory service again.

Azaleas require great care now, that they may be in the desired condition when the time comes that they are needed. It is always much safer to treat azaleas on the cool side than otherwise until it is well nigh absolutely certain that they will not be ahead of time.

Spireas should receive attention in a very short time, and when they are once well under way they should never be allowed to get in the least dry at the roots, because if they do disastrous results will result.

Deutzias well grown are most desirable plants for Easter, and they are well adapted for forcing, because if occasion and necessity require a little extra prompting in the matter of heat does not work injury to them.

Keep all eyes continually on lilies, always remembering that after Easter the same as before that festival these plants and flowers are but moderately profitable.

In making preparation for the propagation of dahlias, it will be well to have a clear idea of what is wanted and the quantity for each purpose; that settled, with the varieties decided upon, push ahead with the propagation. Keep the stock and the cuttings rather cool than otherwise and do not shade either for long.

It is always well to thoroughly wash all woodwork in graperies before starting the vines, and if a good coat of paint can be given in addition so much the better. It is surprising how mealy bug manages to hide in small crevices bordering the glass and other-where. There is nothing that is so effectual in stopping their heart action when hidden in such places as a coat of good white lead and linseed oil well worked in and spread over.

If mealy bug was at all noticeable on the vines, it is desirable to remove the loose bark and carefully examine around the eyes to ascertain if any still remain, and if so as carefully remove the same. After this work of dry cleaning the vines is completed,

they should be painted with a rather thick solution of whale oil soap, sulphur and a little kerosene, made thicker for adhesion by the addition of a reasonable quantity of red clay and cow manure.

The exhausted soil on the surface of the border should be cleared away and the roots laid almost bare, then good fibrous turf, enriched according to discretion, placed instead of what was taken away. The vines need a good watering shortly after heat has been applied, but care should be taken not to overwater immediately afterwards until growth has made considerable progress. Undue excitement is very injurious even in early forcing. Peaches and nectarines should by this time have all superfluous wood removed from them and all fruiting and other necessary wood neatly and carefully tied on before the buds begin to swell too much and expand. If San Jose scale is in evidence, lose no time in applying the most approved and reliable remedies.

THE PEONY MANUAL.

The first edition of the Peony Manual was of necessity imperfect. The issue of 2000 is now exhausted. We presume the Peony Society some time in the future will issue a work on the subject. But something is needed now. A new edition is in the hands of the printer. Great pains have been taken to have it up-to-date in every way. Descriptive lists from France, Holland, and America have been gathered, and about 200 of the leading sorts are given with originators and dates. Peonies have been placed in three classes:

1. The indolent, or lazy, that won't bloom.
2. The sensitive—affected by late frosts.
3. The free bloomers, the most valuable of all.

Especial attention is paid to raising from seed. Minute directions are given for preparing ground, dividing roots, planting, etc.

C. S. HARRISON.

A DESIRABLE GIFT FOR YOUR EMPLOYEE.

There can be no more useful and appropriate present than a subscription to HORTICULTURE. The more he reads HORTICULTURE the better service he will render you. If you want to give five or more we will be glad to make a special discount, on application.

- Dwarf Fruit Trees. Waugh. Price, 50 cents.

NEW BEDFORD HORTICULTURAL SOCIETY.

The annual meeting of the New Bedford Horticultural Society was held in the rooms of the Y. M. C. A. Building on Monday, Jan. 14, when the first president, Wm. Keith, retired from office after four years of strenuous service. The following officers were elected: President, Frank C. Barrows; treasurer, Edward E. Peirce; clerk, Joseph C. Forbes, re-elected; assistant clerk, Edward E. Shaw. The following were elected to serve as executive committee: A. J. Fish, Thomas White, H. A. Jahn, James H. McVicker and W. H. Richardson.

At a previous meeting it had been decided to hold a spring show; but owing to the partial destruction of the city hall by fire a few weeks ago, the idea was abandoned. The city hall has always been available for exhibition purposes upon very liberal terms; and for lectures and exhibitions where no charge was made for admission and which were considered to be of an educational nature, no charge for the use of the hall being made.

The four years of the society's existence has been a period of progress and of usefulness. Although the annual membership fee is very small and donations have been few, a number of free exhibitions have been given and free lectures delivered. The object of the promoters has been to interest the general public in the pursuit of horticulture and civic improvement. The executive committee were instructed to formulate plans for a monthly exhibition of plants, flowers, etc., upon a small scale, for distributing free packages of seeds to the school children and also for a way to interest the children in the destruction of moths, nests, etc. To encourage this work a sum of fifteen dollars has been promised by a prominent citizen.

ARISTOCRAT.

Photo. Dec. 1, 1906 Chicago Carnation Company.

FLORISTS' AND GARDENERS' CLUB OF RHODE ISLAND.

The club celebrated the eleventh anniversary of its existence on Thursday evening, January 10, with a dinner and entertainment in the new store of Rennie & Thompson. The room and tables were elaborately decorated. A social half hour preceded the dinner, which was served at 8.30, and was followed by a stereopticon entertainment, divided into humorous

and travel views. W. B. Wilson was the lecturer. Dr. A. J. Wheeler of the R. I. Agricultural College was a guest. M. Sweeney, Wm. Appleton, Alex. Macrae and Secretary W. E. Chappell were the committee in charge of the arrangements.

PASADENA GARDENERS' ASSOCIATION.

The regular meeting of the Pasadena Gardeners' Association was held at the G. A. R. Hall, January 4th. It was well attended and various topics were discussed. The annual election of officers resulted as follows: President, John Blake; vice-president, A. McLeod; secretary, H. Merrill; treasurer, G. A. Sawyer; trustee, A. T. Hansen. The meetings will be held as usual on the first and third Friday of each month at 8 P. M. at the G. A. R. Hall.

CALIFORNIA NOTES.

The recent demand of violets for moist weather has been abundantly supplied every day during the past week, and now again, like all other seasonable blooms, there is a sufficiency for the trade.

Professor C. W. Woodworth, head of the entomological department of the University of California, is sought by the University of Mississippi as president of that institution.

At Brentwood, Cal., a central town of a horticultural section within two hours' ride of San Francisco, an adjourned meeting of those interested in the proposed Farmers' and Horticulturists' Telephone Association was held this week. The purpose is to install a metallic system, extending over about forty miles of territory, with one central office. Connection will be made with the Sunset Company for long-distance outlet. Much interest is manifest in the movement, and many signatures of growers in its support have been obtained.

LIBRARY NOTES

On two previous occasions I have given in the columns of HORTICULTURE some short notes of recent publications relating to gardening. To anyone interested in the literature of horticulture it has long been abundantly manifest that there must be an extraordinary demand for new books connected with the garden and of late the supply would seem to be almost in excess of the demand. But as month after month goes by the publishers' lists still contain announcements of further additions to the already lengthy lists and as we have nowadays all the resources of color printing and process blocks at our command most of the new books are produced in a style infinitely superior to that in vogue a few years ago. The printing, binding and illustrations are today wonderful examples in the art of book making and many of the modern books are so expensive as to cause one to wonder what class of gardener either amateur or professional it is that can afford to keep constantly buying them.

One of the noblest volumes ever published is unquestionably *The Art of Garden Design in Italy*, by H. Inigo Triggs (Longmans, Green & Co., London.) The published price of this grand folio which measures 17 inches by 13 inches is a trifle over eighteen dollars in American money and it is dedicated by permission to H. M. Queen Margherita of Italy. It is bound in buckram with gilt top and contains 132 pages of letter press each with a grand margin such as will appeal to every book lover's heart. There are 128 plates of which seventy-three are reproductions in collotype from photographs specially taken by Mrs. Aubrey Leblond. The others are half tone blocks and reproductions of old engravings dealing with Italian gardens. In addition the various chapters are illustrated by plans, sketches, and measured drawings of garden detail in fountains, statues, ponds, terraces, balustrades, steps, vases and other innumerable garden accessories.

The author's scope is extensive, for the villas and gardens selected for treatment range from those in Lombardy to those as far south as Sicily, and including many far-famed places.

The *Art of Garden Design in Italy* is divided into two main divisions—The first consisting of an historical essay dealing with garden planning from the early days of the Roman Republic through the imperial age down to more modern times. The other division consists of a series of descriptive and critical studies of a large number of the principal villas still remaining.

The frontispiece is a fine view of the garden approach to the Villa Palmieri at Florence. Another is a plate representing the terraces and mount on the south side of Isola Bella, that curious terraced island garden in Lake Maggiore built by the Count Borromeo and described by many a traveller, from the days of Bishop

Burnet and Charles de Brosses down to the present time. Villas on Lake Como are represented by views of the Cypress Avenue Villa d'Este, the entrance forecourt of the Villa Carlotta and others. The fountain of Neptune in the gardens of the Palazzo Doria at Genoa is a striking and effective picture. The Cloister garden of the Certosa di Pavia and the Cypress Alley at the Villa Giusti, Verona, also merit a few words. A typical Italian garden picture is that of the steps of the Villa di Castello near Florence with flower pots arranged on each side. The loggia of the Villa Bondi Florence is one of the finest. The palm walk in the Royal Palace of the Quirinal is also a typical scene. But our time and space are limited and we must pass on to other things of a bibliographical nature that require notice.

Hortus Veitchii by James H. Veitch. This is a work of an entirely different character although it is in many respects a handsomely got up book, printed, illustrated, and bound in good style. It is a very large octavo (11x7 3-4 in.) and is as we are told on the title page a history of the rise and progress of the nurseries of Messrs. James Veitch and Sons together with an account of the botanical collectors and hybridists employed by them and a list of the most remarkable of their introductions. The *Hortus Veitchii* runs into over 540 pages, there is a large number of full paged, well executed engravings of plants, trees, flowers, etc., besides a series of portraits of the various members of this illustrious firm. It is only a short time ago since we had occasion to notice a somewhat similar kind of publication issued by Monsr. Philippe de Vilmorin, but that published by the English house is in every respect a much more formidable and comprehensive work.

There are interesting sketches of the lives of travelers sent abroad by the firm at different times, similar treatment being accorded to the hybridists in the firm's employment, the first hundred pages or thereabouts being devoted to this preliminary matter. In rapid succession follow the chapters dealing with Messrs. Veitch's introductions of plant novelties.

An excellent index brings to a close this work the author of which has been in some respects assisted by such authorities as Mr. Henry J. Veitch, Mr. P. C. Veitch, Mr. J. G. Veitch, Dr. Masters, Mr. G. Nicholson, etc.

The Heart of a Garden, by Rosamund Marriott Watson. (The De la More Press, London.) This is a work in which poetry and gardening are combined, and is the description of an English garden, by its owner, who is evidently an enthusiastic amateur, from spring to winter. There are numerous illustrations of gardening scenes from photographs, many of which represent delightful little bits that will appeal to many a reader. *The Heart of a Garden* belongs to what we may properly describe as the literary gardening work, and of these there seems to be an ever increasing number as of the more practical.

My Garden, by Eden Phillpotts. (Country Life Library, London.) So far as the paper, printing, binding and illustrating go this is a very similar book to the preceding, but if this conveys but little idea to the reader it may usefully be said that every work issued by the Country Life Library is turned out in a style that reflects credit on author, printer and publisher alike. Mr. Eden Phillpotts, although a writer of repute, has never yet written a gardening book until now. He only ought to have done for there is a style, and a flavor of humor about his writing that is not often met with in works by the regular horticultural scribe.

It would be too long a task to deal with "My Garden" on its merits and it must suffice to say that the numerous illustrations are executed in the highest style and consist of some charming little bits from this well-known literary man's gardens. Some of the iris pictures are very finely done and a large portion of the book is devoted to that flower and also to the white rockery, and rockeries nowadays are the subject of an increased interest in this country. Mr. Phillpotts' writing is descriptive of many choice plants and flowers in his garden and is essentially interesting from the quiet humor in which he holds his reader right through the book. We do not remember to have experienced the same satisfaction in perusing a gardening book since we read "My Summer in a Garden" by Charles Dudley Warner. In this work we certainly have a happy blending of the literary and the practical elements.

The Small Garden Beautiful and How To Make It So by A. C. Curtis. (Smith, Elder & Co., London.) This is another work executed in all points in much the same manner as the book preceding. The chapters are few and cover such subjects as design, groundwork, the herbaceous border, hardy perennials, rock and water gardens, roses, shrubs and climbers, the kitchen garden and cultural notes. There are about a dozen plans to enable beginners to start in laying out a new garden and this is a feature in English gardening books that has very largely been conspicuous by its absence.

Pictorial Gardening by George F. Millin. (Methuen & Co., London.) This is a much smaller octavo cloth bound volume than those mentioned just previously and the illustrations, of which there are twenty-four, are small and by no means so well executed. The book is well printed in a large, clear cut old style type and is announced by the publishers to be an attempt to apply the principles of the landscape painter's art to the formation of small gardens.

Gardening Made Easy by E. T. Cook. (Country Life, Ltd., London.) This is a wonderful shilling's worth, and is described as a simple handbook to the garden. The author is a well known horticultural writer who has done much in the way of editing some very attractive books on gardening during the past few years, most of them

being published by the Country Life Limited. The cultural directions are freely and explicitly given, and under the various headings lists of the best flowers and plants for outdoors and the greenhouse are supplied. Also the names and descriptions of ornamental trees and shrubs. Useful vegetables and fruits likewise occupy the author's attention. There are a few illustrations explanatory of the bed, and among other subjects roses are liberally dealt with. Orchids that are good, cheap and easily grown by amateurs also find a place in this handbook which is probably without a rival in price.

Every Man's Book of Garden Flowers by John Halsham. (Hodder and Stoughton, London.) The author of this little volume published not long since, "Every man his own Gardener," which has now been supplemented by a well printed, freely illustrated cultural dictionary of 375 pages dealing with border and bedding flowers usually grown in British gardens. The arrangement is alphabetical, more or less space being devoted to the various plants according to their importance. There are 128 full paged illustrations from photographs all fairly well executed.

A Concise Handbook of Climbers, Twiners and Wall Shrubs by H. Percy Fitzgerald. (Methuen & Co., London.) About three years ago Messrs. Methuen & Co. published a neat little handbook by Mrs. H. M. Batson entitled "A Concise Handbook of Garden Flowers" and they have now still further extended the series by issuing two others uniform in style. The first of these is the one bearing the above title and is a neatly printed little foolscap octavo volume bound in cloth and printed on antique paper. The book contains 32 prettily executed process illustrations and is certainly a handy little companion volume to Batson's concise handbook of garden flowers.

A Concise Handbook of Shrubs by Mrs. Gwynn Lewis. (Methuen & Co., London.) This is another book of the same series as the preceding. It is printed and bound in the same style and published at the same price. The cyclopedic arrangement is adopted, and the book is illustrated with photo engravings. One extract from this work will show how it and the companion volume on climbers are arranged, the entries being in strict alphabetical order throughout, viz.: *Arundinaria Veitchii*. Japan. H.; 1 to 2 feet. Syns. *A. albo-marginata*; *A. kurilensis varpaniculata*; *Bambusa tessellata*; *B. Veitchii*. A free-growing dwarf species, rather shabby in winter, but extremely decorative in spring. The species given do not exhaust the hardy *Arundinarias*, but form a representative collection of the most ornamental varieties.

Batson's, Fitzgerald's and Lewis's three little volumes will form an excellent trio on the subjects to which they refer being uniform in size, and style as already mentioned.

Seed Trade

For many years the drift of population towards the cities has caused students of political economy grave concern, but for the past two or three years they have detected a lessening of the tendency in that direction, and now comes Commissioner Wieting of the New York State Department of Agriculture saying that the tide has actually set in the opposite direction—away from the cities and back to the farms. The increased value of farm products, improved methods of communication, such as rural free delivery and suburban trolley lines tapping the country districts in all directions and giving quick and easy access to the towns, have made farming more attractive than a few years ago. There is still a scarcity of farm laborers, and with the present high prices paid skilled labor in cities this condition is not likely to improve materially for a time. It is said that many abandoned farms in New Hampshire, Vermont and other eastern states are being taken up, all of which is pleasing news to seedmen and every one else interested in agriculture.

In last week's issue reference was made to the plan which Dr. Galloway, of the Department of Agriculture at Washington, has been recommending to Congress, now that the handwriting on the wall foretells the doom of "free seeds", that old abuse which has been a nightmare to seedsmen for many years. While the Doctor's plan is a long step in advance of the old one, and is in reality but a return to first principles it is an open question if Government assistance on any basis is a present day necessity. With our fine mail facilities and the prospect of a parcels post at no distant day, and with the hundreds of catalogs giving information and offering for sale every new and promising product of agriculture, it cannot be said that Government work is really needed. Still any improvement on present conditions is welcome and it may be well to give the Doctor's suggestions a fair trial. Eternal vigilance, however, will be needed on the part of the seedsmen to prevent a return to the system from which we are now seeking relief.

The catalogs for 1907 are a credit to the seed trade taken as a whole, and the fact that take novelties are offered, and exaggeration is the main feature of a few catalogs, does not detract from this fact. Some novelties of sterling merit are offered, and it may be safely predicted that they will soon become standard varieties.

C. C. Morse & Co. announce that in common with the other seed growers in California, they have agreed to change the terms of payment on contracts which have heretofore ruled in the seed business, making them 60 days' net, or 2 percent. discount for cash. This action, they claim, is made necessary on account of general business conditions on the Pacific Coast, where there is almost a famine of labor, and where nearly everything the grower buys to conduct his farms is bought on a "spot-cash" basis. They claim they are only asking that the seed dealers share a small part of their burdens by consenting to these

STORE OF THE JOHNSON SEED COMPANY.

The Johnson Seed Company, of which Herbert W. Johnson of the old firm of Johnson & Stokes, Philadelphia, Pa., is president, was established in July, 1906, on the expiration, by limitation, of the last-named firm. In the catalogue just issued by the new concern Mr. Johnson says: "Before establishing the late firm of Johnson & Stokes in 1881, I served an apprenticeship of nine years with one of the best-known seed houses in Philadelphia, since which time I have taken personal and complete charge of the growing of and contracting with private growers for the entire garden seed supply of Johnson & Stokes. Thus I offer you the benefit of thirty-four years' all-round experience, as employee, partner, seed-grower, business head and manager of a successful seed business.

"It being my desire to give to several of the old and deserving employees an interest in the business, by making them stockholders, the Johnson Seed Company was formed, of which I am president and general manager; also giving, as I have done in the past twenty-five years, close personal supervision to our seed crops during growth.

"Joseph F. Bradley, for twenty-four years with the late firm of Johnson & Stokes, continues as manager of the order department of garden and grass seeds and poultry supplies. William J. Sherry, for twenty-two years with the late firm of Johnson & Stokes, also retains his old position as manager of the flower seed, bulb and mail order departments. Clifford Phillips, who has had charge of the books and accounts of Johnson & Stokes for twenty years, is secretary and treasurer of the new company. A large number of other old and competent employees also remain in their former positions."

The Johnson Seed Company has seed testing and plant growing houses at Pavonia, N. J. In addition there are the Cedarcroft seed gardens and trial grounds, which comprise 28 acres of a great variety of soils, for the testing of flowers and vegetables, and for growing and developing choice high-grade seed stocks for planting at Gardendale or on the firm's other seed farms or those of its expert private contract growers. The store illustrated

reasonable business terms. They state that their action in not sending a representative among the Trade this year and in not wishing to book advance contracts against their onion crop was not influenced in any way, shape or manner by the attitude or action of any other grower or any other seedsmen, and was decided upon on account of the general conditions only. Excepting in the matter of terms, they state positively that they have no understanding or arrangements with any other grower or growers, and they are in no combinations. Any statement

herewith is located at 217 Market street, Philadelphia. Over \$7000 has been expended on new fixtures and modern equipment in all departments.

to the contrary is wholly without foundation.

A new seed firm has just opened up in Los Angeles under the name of Morris & Snow. O. M. Morris is an old-time seedsmen here and was for a number of years with the Germain Seed Co., of Los Angeles and of late represented J. C. Vaughan on the Pacific Coast.

John C. Bodger of John Bodger & Sons, seed growers of Gardena, Calif., is about to leave for the East on an extended business trip.

Johnson's
High Class

FLOWER SEEDS

For Early
Sowing

We would call special attention to our superior strains of Petunias, Verbenas, Stocks and Pansies, which are absolutely the best procurable.

Ageratum Blue Perfection, dark blue, trade pkt. 15c., oz. 50c.

WILLIAM SIM, Cliftondale, Mass.

OUR CREDIT SYSTEM: ITS USES AND ABUSES.

By S. S. Skidelsky. Read before the Florists' Club of Philadelphia Jan. 1, 1907.

(Continued from page 237.)

And right here I wish to be understood that I am in no wise reflecting upon the honor of those who, through no fault of their own, but owing to adverse business conditions or unforeseen circumstances, were compelled to liquidate their affairs as best they could—in other words, to fail in their business. Such men deserve our sincere sympathy, and it behooves us as men and as members of a "noble craft" to do all within our power to aid them. It is the scamp, not the unfortunate victim of circumstances—the man (God save the name) who lays his trap for the unsuspecting Hollander, who scans the trade papers and picks his victims as he sees fit to suit his own nefarious designs; it is a fellow of this sort, I say, that deserves our unqualified censure and our uttermost condemnation. Aside from the moral element involved, aside from the fact that scoundrels should be discouraged on general principles, we must view the situation from the standpoint of self interest, of self protection. It is a duty which we owe to ourselves, to our fellow-members, to the community at large to turn the rascals down and out. It is high time, indeed, that we realize the situation as it affects our common interests. Often the misdeeds of one miscreant will reflect upon the honor of the innocent. It is but human nature to profit by experience. If John has victimized us, it is not likely that we will place our implicit trust and confidence in Tom, notwithstanding the fact that the latter means us no harm.

It is in instances of this sort where credit not only ceases to be a blessing and a privilege, but it becomes an absolute curse, and the sooner we realize it, the sooner we devise some means and ways whereby to put an end to such abominable practices, the better for all concerned. Our trade papers can and should help us to accomplish this worthy object, for there is no means more effective, there is no weapon more powerful than the press. Under the glare of its far-reaching searchlight human rats invariably go under cover. If credit is a privilege, that privilege must not be abused.

Fortunately, however, such men, the black sheep in our fold, are but in the minority and need not be considered in connection with our credit system, as practiced by the rank and file, the men whose honesty and honorable in-

tentions are beyond reproach, who meet their obligations in the long run.

A few weeks ago I happened to meet a fellow traveler, representing a Western crockery concern, who in the course of our conversation, remarked to me that "the florists are awfully slow pay; that while other business men will either pay upon maturity, or else will write to the house and ask for an extension of time, the florists, as a rule, do neither; that statements, letters and drafts seem to have no effect upon them. Eventually, of course, they pay, but they do so to suit their own convenience, regardless of conditions or terms." I need hardly add that there is a deal of truth in these remarks and that the man knew whereof he spoke. As a matter of fact—and I say it without any fear or reservation—in the majority of cases, terms are honored more in the breach than in the observance. To be sure, the average florist means well; he means to pay his bills—some time; he has good intentions, but—and here comes the rub—good intentions never were and never will be a negotiable asset; good intentions can never pay an account. A book full of "good intentions" is no more effective and can no more sustain the stability of a business house than a prayer of Dowie, for example, can stay the ravages of an incurable disease. Like prayer, good intentions are good enough in their place, but in this matter of fact world, unless backed by something tangible, something negotiable, good intentions are of no particular consequence.

It seems to me—and again I say it without any fear or reservation—that some of the best men in our business have but a mistaken idea as to the duties and obligations they owe to a business house. Just because they see fit to patronize a business house, it does not necessarily follow that they have the right to ignore the business terms as laid down by that house. I do not mean to convey the idea that I am an advocate of iron-clad rules, that none but strict conditions should govern all business transactions transpiring between buyer and seller. On the contrary, I believe in liberal business methods, I believe in liberal business terms. I hold that any man, worthy of credit, is entitled to all due consideration and liberal treatment, but I likewise believe that privileges of this sort should not be abused unnecessarily.

Assuming for the sake of argument that such a thing as a committee of credit men, appointed by, and acting under the direct supervision of the Society of American Florists, were possible; assuming furthermore that such a committee had the power to act, to pass judgment and to lay down rules and regulations in all matters pertaining to our business or credit system, would it not appeal to each and every one of us if this committee saw fit to pass a resolution something of the following order:

1st. Resolved, That no business house is worthy of patronage unless it manifests a liberal spirit towards its patrons.

2nd. Resolved, That no business house need or dare expect the good will of any florist in good standing unless it shows consideration for and

DREER'S SUPERB DOUBLE PETUNIAS

For nearly half a century we have been making a specialty of **DOUBLE PETUNIAS** and our strain is accepted as second to none, either here or in Europe. We annually plant many thousand seedlings from which only the finest double fringed forms are selected for propagating purposes, thus improving the strain every season, and this year's collection is the brightest and most pleasing one we have yet sent out. We offer fifteen distinct varieties.

3-inch pots, 75c per doz.; \$6.00 per 100; the set of 15 for \$1.00.
2½ " " 60c " " 4 00 " " 15 " 75.
SEED OF OUR SUPERB STRAIN OF FRINGED PETUNIAS, Double, 75c per 500 seeds;
\$1.50 per 1000 seeds. Single, 50c per trade packet.
Our Quarterly Wholesale List offers a full line of seasonable Plants, Seeds and Bulbs.

Caldwell, the Woodsman Decorating Co., Inc., EVERGREEN, ALA.

OUR CREDIT SYSTEM: ITS USES AND ABUSES.

(Continued from page 72.)

a good will of its own towards its patrons.

3rd. Resolved, That no florist is entitled to credit and to all the advantages accruing therefrom unless he realizes the need of paying heed to statements, of answering business letters, and of honoring drafts.

4th. Resolved, That any florist of good standing reserves the right to exact the most liberal terms possible, but when once agreed upon, such terms are to be honored, not in the breach, but in the observance; and

5th. Be it further Resolved, That if any florist finds himself in strained circumstances and is not able to meet his obligations in due time, such florist is obliged to write and explain matters to his creditors, said creditors to make all due allowances and to show all due consideration as the case might warrant.

One of our great shortcomings in the regulation of our credit system, it seems to me, lies in the fact of our very loose methods in dealing with the "four hundreds" of our towns. It is a matter of record that "society folks," while in nowise backward in following the dictates of fashion, are decidedly so in paying their flower bills. It is not unusual to hear Mr. So and So, a prominent man about town, occupying a magnificent mansion, driving fast horses, or a \$5,000 automobile, has not paid his flower bill since "June a year ago." Nor is it out of the ordinary to learn that Madam Blanc who gave Mr. Florist a carte blanche order some ten months ago, has left for the seashore, the mountains, or for Europe

without giving her flower bill the least thought. "Of course, Mr. Florist tells us the money is good, and it won't do at all to send a second bill, much less to press for a settlement." Mr. So and So or Madam Blanc might feel offended. No, it won't do at all. Then, there is another reason to be considered. There is a competitor around the corner who is just looking for the chance of carrying such accounts on his books for one or two years.

That our credit system is defective, antiquated and out of accord with our present business conditions is self-evident, and need not be dwelt upon at greater length here. Nor is it my object to suggest any new methods to you or to point out the remedy. I submit this question to your own good judgment, and sincerely hope that you may give it your earnest and serious consideration. It is a question that concerns us all alike, the wholesaler as well as the retailer, the man who has already made his start in life, as well as the young man who bends all his energies and all his ingenuity towards that end.

Philadelphia, the horticultural centre of the United States, a city, whence so many good things have sprung in the past, is pre-eminently fit to take up the work of reform. And this is a most opportune time to undertake a work of this sort. Our national society meets here in August. There are many good things in store for us, we may be sure of that. Some may tell us something about the ideal gardener or employer, some about conducting our stores, others about operating our greenhouses with profit. Let us hope that some good soul may tell us how to bring about the much needed reform

in our credit system, a subject well worthy of the earnest consideration of the best men in our society.

NEWS NOTES.

In the fire which occurred in the greenhouse of W. B. Perry, Cresco, Iowa, on January 1, the heating plant was destroyed and much damage done by smoke.

The J. H. Rebstock Co., Buffalo, have leased another store, 20 East Chippewa street, where extensive alterations are being made for a fine retail establishment.

The American Society of Landscape Architects hopes soon to have published Humphrey Repton's "Art of Landscape Gardening"; Thomas Whately's "Theory and Practise of Landscape Gardening" edited by Frederic Law Olmsted, Jr., and the work of Furst Puckler von Muskau, edited and translated by Samuel Parsons, Jr. It is expected that the appearance of these works will give an impetus to the art of landscape gardening.

Chas. Knauss, a very prominent Detroit citizen, who bought out Geo. M. Leadley, has started suit against Leadley to have the deal annulled. The business was represented to him as averaging \$5,000 to \$7,000 per year profit but he claims that the book accounts were padded showing that the business was not on a paying basis. Judge Hosmer has granted an injunction to prevent Leadley to put incumbrances on the flat he received in trade from Mr. Knauss. Mr. Leadley is now acting as manager for the Lachman Floral Co., which recently opened a store on Wilcox street, two blocks from Leadley's former store.

PERSONAL.

Visitor in Boston—H. Frank Darrow, New York.

CUT FLOWER MARKET REPORTS

BOSTON Flowers of desirable quality are scarce. There is no "January glut" this season and no prospect of a plethora for weeks to come. As to roses the question of quality is secondary to supply and everything sells, because there is not enough all told to go around. Carnations are also in short supply but quality is good. Violets are plentiful the big singles with 10 in. stems outclassing the doubles. Bulbous stock is increasing. There are some fine trumpet daffodils, good tulips and plenty of excellent lily of the valley.

From now until the **BUFFALO** Lenten season begins there will be only mild succession of affairs and an occasional ball or theatre party. The week just completed held only a few informal entertainments. A dull week has just ended in the flower line. Stock of all kinds and plenty of it all along the line, but sales are not flourishing, and in many instances "force" is applied. Carnations have been the most abundant: too many of the ordinary quality; the fancy varieties sold considerably well. Good quality of select Bridesmaids, Brides, Liberties and Chatenay are not too plentiful, but short Liberties are too many at times. The market has been fairly good on narcissus, Romans, lily of the valley, lilies, mignonette and freesia. Violets in good supply; plumosa and Sprengerii sprays a little scarce; smilax an over-supply.

While some of the **CINCINNATI** craft have been busy business as a whole has been very quiet ever since the holidays. If there was anything doing to speak of stock would be scarce for there is very little coming in to the commission houses, but as it is the little is an ample sufficiency. The weather has been warm and cloudy and roses have the appearance of being old and faded while carnation split the calyx and hang their heads. Bulbous stock is good but moves rather slowly. Violets are of good quality and are selling well but at ruinous price. Harrisii lilies are scarce and are grabbed up the moment they arrive. A few poinsettias are tail-enders and amount to little. Prices are gradually declining as stock deteriorates but a change in the weather will bring greater changes in the cut flower market.

The past week has **COLUMBUS** seen a fine, steady trade, at good prices. Owing to the long-continued spell of sunless weather, stock of all kinds is only in just about sufficient supply to comfortably cover the demand and everything is cleaned up daily. There are now some most excellent plants being brought in, and they sell fast at very fair rates; Primula obconica and cyclamens were especially noted. Everybody is busy, every minute.

Trade conditions are **DETROIT** very satisfactory. Everybody is busy and, while stock is daily cleaned up, it is in quality and quantity more up to the demand.

Trade has been **INDIANAPOLIS** quite active the past week. Dinners, balls and a large amount of funeral work have kept stock pretty well cleaned up. In some lines it is not any too good possibly on account of dark weather. Prices of cut flowers still remain stiff. Beauties are somewhat short in supply and quality not the best. Teas are about equal to demand, some being off color. Carnations are coming in freely, all colors being in good demand. Narcissus, Romans, lily of the valley, violets and freesia are in good supply and find ready sale. Azaleas and cyclamens are still the leading sellers in flowering plants.

Business conditions **LOUISVILLE** the previous week were very poor. There was an abundance of first-class carnations, but the demand was slow. Little interest was shown in roses and there were enough for all needs. Violets were plentiful. Other stock was in good supply but the demand was not there.

The long-continued **NEW YORK** period of dismal rainy weather which has prevailed in this section has had a very deleterious effect on almost all classes of flowers. Roses, especially, show it in soft, flabby, colorless buds; carnations give no evidence of injury in their appearance and are, as a rule, exceedingly handsome, but their keeping qualities are greatly impaired. Lilies are very inferior, as are, in fact, all bulbous crops. Receipts are light, generally, and prices are maintained

with fair steadiness on most lines. Some sales of roses at low figures are reported but the quality was of corresponding cheapness. Gardenias are more plentiful and of higher quality than ever before. Business in general is below the average for the season.

Notwithstanding the dull weather, the market **PHILADELPHIA** was fairly active last week. Red roses were in good supply, although, like all other staples, they were a little off as to color. Bridesmaids were on the scarce list. Carnations were none too good as to quality. Enchantress is still a leader in the pinks. In reds Victory has the call and outclasses such fine sorts as Robert Craig, Flamingo, etc. Among high-grade whites the White Perfection is a leader, with Queen and Boston Market best sellers among the mediums. The demand for lily of the valley is a little slow. Cypripediums and laelias are nearly done, but cattleyas of various sorts are plentiful and extra good. Violets are more abundant, and the price has dropped to about normal for the season. Daffodils are selling well. What little mignonette there is at present is very good and in brisk demand. Greens are plentiful, with the exception of plumosa. Freesias are extra fine. Lilies are not as abundant as usual, but enough to satisfy all demands.

HORTICULTURE'S REPRESENTATIVES.

The government is about to take drastic steps to stop the ravages of the pine bark beetle that is proving so destructive in some of the forests reserves. All insect-infested timber, whether standing or cut is to be sold at once, and the forests carefully cleaned from the debris of fallen or cut timber, and the refuse burned. So far the destructive beetle has confined its ravages to the timber in South Dakota, but like all other evils, unless speedily checked it will extend to other parts of the country, and it is to prevent this the government is taking such active and drastic steps. The government is now seeking buyers for the infested timber, its commercial value not having been destroyed, or even materially injured, and the opportunity presents itself for the purchase of timber at very low prices.

- 840,903. Weed Digger. Joseph A. Bucknall, Detroit, Mich.

NEW PLANTS.

We all appreciate the good qualities of Azalea Vervaeana—so much esteemed for Christmas as well as for Easter. Its only defect is, perhaps, a lack of lustre, and an improvement in that direction comes to us in the new variety Prohilda Mathilda, a sport from Vervaeana with snow white flowers except upper quarter sprinkled crimson shading to a deep stain towards the heart. Very much brighter and finer in every way than the parent. Raised by a Belgian grower who has already been offered almost fabulous inducements by American houses for control of the stock. Another good early is Jean Peters, a lovely bright ruby. Madame Pedrick is a clear pink and a welcome addition. It resembles Van Der Cruyssen but is brighter, more shapely, and freer. The raisers of this variety could easily sell a hundred thousand in the United States.

The new Dracæna Pere Chavon is certainly a magnificent thing—foliage twice the size of terminalis and equally as brilliantly colored.

"HORICUM"

TRADE MARK

San Jose Scale on a Pear.

Kills San Jose,

HAMMOND'S SLUG SHOT WORKS.

"HORICUM" A Scale Killer and Fungicide

A preparation for the destruction of the "SAN JOSE SCALE"; carefully prepared and put up in packages for general use.

"HORICUM" can be obtained from many of the Seedsmen in the United States. A description of the article is aptly told in the pamphlet. It is put up in quarts and gallons to 50 gallon barrels. It is the Lime, Sulphur, and Salt combination, concentrated.

ABOUT "HORICUM"

Hammond's Slug Shot Works, Fishkill-on-Hudson, N. Y.

Gentlemen: Seeing "Horicum" mentioned in Monthly Bulletin of Div. of Zoology, Penna., I would thank you to inform me where I can get a supply, say about a gallon, for trial. The San Jose Scale is very bad around this section and could no doubt push sale of the solution, **especially as it is spoken of so highly in the above mentioned Bulletin.**

P. S. Glenside is twelve miles from Philadelphia.

Yours respectfully,

H. J. HINDS.

Glenside, Pa., March 31, 1906.

The Dust Proof Gear —How It's Made— —And Why—

WE are everlastingly getting after the points that can be improved in every sort of thing that leaves our shops—we have men who do nothing but dig out just these things—you might call them the “watch dogs of the factory”—nothing gets by them. Of course, it often takes weeks, months and sometimes even a year to bring about certain improvements and *test them up*, and testing them up is the really *vital part* of every improvement we make. It comes to you as a *tried out fact*—not a theory. Take for example this new dust-proof gear; we have used the mighty good points in our self-oiling one and carried them out in a little different way. The gears are now entirely enclosed and thoroughly protected; the enclosure cap is removable. The gears run just the same in reservoirs of oil, but the operating rod runs down inside the columns, making a more compact and neater job. If you are using a ventilating apparatus, that your men have to tug at when there's a sudden change of temperature, or a storm is on hand, then you want this gear—one good turn of the handle and it will run down itself. It's not a rough cast affair, but a fine piece of workmanship in every way, with machine cut worm and all that kind of thing. Remember this apparatus has no criss-crossing of levers—no slipping, breaking cables—no complicated chain and sprocket, but a splendid apparatus free from complications, and it will do the work the way you want the work done. Write for prices.

Extract from a recent report of an important firm of Contracting Engineers, concerning the merits of a ventilating apparatus controlled by a rod against one operated by a chain or sprocket.

“The —— device depends for its operation on a chain running over a sprocketed gear, and investigation of these devices convinces us that they are not nearly so reliable as a worm and gear arrangement controlled by a rod, such for instance as the devices made by Lord & Burnham Company. The one great fault in a chain operating device is the constant recurring troubles at top of sprocketed gear. Sometimes a link parts and at others it gets jammed in the mechanism and the difficulty of getting up to so high an elevation seems to us to be sufficient reason for an additional expenditure.”

ENOUGH SAID

... OUR ... CARNATION NOVELTIES — For 1907 —

Winsor, White Enchantress and Helen M. Gould

ONE way to judge carnations is to see them on the exhibition tables. A better and more convincing way is to see them growing; therefore we cordially invite all carnation growers to visit us and judge for themselves regarding the superiority of the above-named sorts.

Our carnation houses are at **Scarborough-on-Hudson**, (not Tarrytown). Friends who desire to visit us can take the N. Y. C. & H. R. R. R. from New York. Trains leave there every half hour. Scarborough is the first station north of Tarrytown. Our grounds adjoin the station, and the greenhouses are about five minutes' walk from the station.

We are growing **25,000 plants of Winsor** for cut flowers, alone, for the New York market this season, which shows the faith we have in it. This will also enable visitors to see it growing in quantity, and besides that, will give us enough plants to get a great abundance of fine, healthy cuttings without over-propagating. We have already booked a large quantity among the large growers, and anticipate for this variety the largest sale of any new carnation that has ever been distributed, as large growers who have seen it are enthusiastic in regard to its value. Those who have seen it have immediately placed large orders for it, so we recommend those who have not ordered to place order without delay, so as to insure early delivery.

For full description of these three valuable novelties, see our wholesale price list. Of course, we shall have all of these varieties on exhibition at Toronto, where they can be seen, and where they will speak for themselves.

Wholesale Prices Rooted Cuttings Spring, 1907

WINSOR.—Soft silvery pink. The best color, best keeper, best shipper, best seller—best every way. \$12.00 per 100; \$100.00 per 1000.

WHITE ENCHANTRESS.—Has the large size, long stem, productive habit of Enchantress, but is pure white. \$12.00 per 100; \$100.00 per 1000.

HELEN M. GOULD.—A beautiful sport of Enchantress. Ground color lovely shade of silvery pink, with very fine pencillings of carmine, making an exceedingly exquisite combination. While on close observation this variety is variegated, the general effect is one beautiful tone of dark pink. Exceedingly valuable, because it combines the earliness, freedom, long stem and large size of Enchantress, giving another color possessing all the other desirable qualities of Enchantress. \$12 per 100; \$100 per 1000.

BEACON.—Orange-scarlet. A vigorous, healthy grower, of ideal habit. A profuse bloomer, with long stems. \$12.00 per 100; \$100.00 per 1000.

ARISTOCRAT.—Cerise-pink. Will be planted largely in place of Lawson. \$12.00 per 100; \$100.00 per 1000.

MELODY.—Daybreak sport of Lawson, about the same color as Enchantress, but much brighter, and does not fade like Enchantress. Also a much better keeper and shipper. Those who grow the Lawson varieties exclusively will find this very valuable and desirable, because it gives an improved Enchantress color, which is so popular, and at the same

time can be grown in the same house with the other Lawsons. An extra fine thing in every way and in great demand. A great addition to the Lawson class. \$10.00 per 100; \$75.00 per 1000.

ROSE PINK ENCHANTRESS.—A sport of Enchantress. Color, dark rose pink. \$7.00 per 100; \$60.00 per 1000.

WHITE PERFECTION.—A novelty of 1906, and a variety for which there is a great demand this season. A third larger than Lady Bountiful and a more perfect flower. \$6.00 per 100; \$50.00 per 1000.

VICTORY.—Scarlet. This is giving great satisfaction, being a free blooming, profitable scarlet. \$6.00 per 100; \$50.00 per 1000.

RED LAWSON.—A fine red. Our stock of this is superior to many stocks of Red Lawson that we have seen. \$4.00 per 100; \$30.00 per 1000.

VARIEGATED LAWSON.—The most productive of the variegated sorts. A favorite. Outblossoms Mrs. M. A. Patten. \$4.00 per 100; \$30.00 per 1000.

WHITE LAWSON.—An excellent white. \$4.00 per 100; \$30.00 per 1000.

LADY BOUNTIFUL.—Pure white. \$4.00 per 100; \$30.00 per 1000.

ENCHANTRESS.—\$3.00 per 100; \$25.00 per 1000.

MRS. M. A. PATTEN.—\$3.00 per 100; \$25.00 per 1000.

MRS. THOS. W. LAWSON.—\$3.00 per 100; \$20.00 per 1000.

F. R. PIERSON CO., Tarrytown-on-Hudson, New York

Ornamental Conifers

(Continued.)

ABIES CEPHALONICA
Dana Island—Height, 40 ft.

LARIX (LARCH OR TAMARACK)

Larix, so useful for its wood, is found in the most northern part of Europe, Asia and America. They are the last trees found in the far north therefore they are all very hardy. The gracefulness of their more or less pendant twigs and the light green of their foliage especially in the growing time, makes them very attractive objects on the most exposed hillsides, where they can be planted in masses; also when isolated they make very ornamental trees. There are only a few species and from a horticultural point of view there is very little difference between them. From America we have *L. occidentalis*, the northwest larch. *L. laricina*, or *Americana*, the common northeast tamarack. *L. Lyallii* is an alpine tree which grows in the northern part of the Sierras. *L. Europæa* is the European larch which has a pendulous and a glaucous form. *L. siberica* is found in north Russia and west Siberia. *L. dahurica* is found in east Siberia and *leptolepis* grows in Japan. *L. Griffithii* from Himalaya is the most delicate and also the most difficult to grow. It has long pendant branchlets. Larches are all deciduous and take a golden yellow color in the fall before dropping their needles.

Pseudo-larix, or *laricopsis* (a new name) *Kaempferii*, the Chinese golden larch, is a beautiful large-growing tree which has the needles larger than those of the other larches, the branchlets are not drooping and the appearance of the tree is of a more horizontal spreading habit. In the fall the yellow color of the needles is more intense.

CEDRUS ATLANTICA GLAUCA
at Doseris, L. I.—Height, 30 ft.

CEDRUS

Through their foliage the cedars have some resemblance to the larches, only their needles are stiff and more persistent. Cedars are the most magnificent trees where they can be grown.

C. atlantica from Africa is the only one about hardy in our climate, and it requires a sheltered place. The *glauca* and *aurea* forms are fine trees and a sight on a big lawn where they can be sheltered from north and northwest winds. Like most of the conifers, trees of a certain size which ripen well their growth stand severe winters better than young plants which grow late through the season and have their wood not ripened when frost comes.

C. Libani (Cedar of Lebanon) is the oldest known species. While *C. atlantica* has an erect habit of growth this one extends its limbs in a more horizontal way. Those who have seen them growing in England know what a majestic looking tree this is; but it is less hardy than the Atlas cedar.

C. Deodara, the largest growing and, when young, the most graceful of the three. There are a few forms of it. We had a dozen imported trees which grew well for a few years; they were about twelve feet high, when the winter 1899-90 (I think it was) killed them all and many other things. So I do not think they can be grown further north than Washington, or may be Philadelphia in selected situations.

A great loss The death, recently, of two generous patrons of horticulture, Mrs. Robert C. Hooper and Mr. George F. Fabyan, is a severe loss to the Massachusetts Horticultural Society, whose plant exhibitions they supported with frequent contributions, encouraging their garden-

ers to take an ambitious interest in the competitions and exercising a potent influence on the community through the beautiful estates which they maintained. Mr. Fabyan was a trustee of the Society at the time of his death.

An important horticultural enterprise

The sending of Mr. E. H. Wilson to China by the Arnold Arboretum is the most important and far-reaching horticultural enterprise that has ever been started in America. Mr. Wilson, who is young and enthusiastic and has acquired through his five years' previous experience a thorough familiarity with the Chinese flora, may be expected to add much to the knowledge of the floral and arboreal wealth of this little-known land and especially in the line of new plants likely to be hardy in this climate.

Work for the peony specialists

Peony enthusiasts are coming to realize more and more the formidable task they have before them in bringing into any semblance of order and reliability the tangled up lists and still more tangled up stocks in nurserymen's hands. The long time required for adequate testing and comparisons in the case of the peony is one of the greatest drawbacks in the work of straightening out identities and calls for a large measure of patience and perseverance as well as a considerable self-sacrifice on the part of those engaging in it. One first step should be to apprise dealers at home and abroad that a watch is set and that whatever of loose practice may have prevailed hitherto it will be tolerated no longer. This will be some assurance that reform is really under way.

Mechanical watering

Mechanical watering comes to the surface again in the paper by Mr. Wittbold before the Carnation Society and in Mr. Finlayson's notes in this issue. There are two systems now seeking approval of the practical horticulturists and each finds friends ready to approve as well as critics ready to condemn. The advancing demand for plants of difficult culture in greater variety than ever before obtainable in this country calls for the highest skill of the plantsman and careful individual watering with the antiquated (?) watering pot is likely to prevail in this line, at least, for many a year to come. Whether wholesale watering in the case of entire houses of one specialty is to displace all other systems is something that will be decided not by claims nor by criticism but by experience and that takes time.

A good plant traduced

A western contemporary is out with an unfavorable criticism of the keeping qualities of Begonia Gloire de Lorraine. As on a number of occasions in the past, we are glad to say a word in refutation of what seems to us an unjust disparagement of one of the best flowering house plants ever introduced. We have in our window at the present time a plant of

this begonia well-covered with foliage, flowers and buds. This plant was brought from Cincinnati by Mr. Peterson last fall and used by him as a sample in taking orders. After he had got through with it, in Boston, he presented it to the editor of HORTICULTURE who, after it had stood several days in the office, took it home. It has since done acceptable duty on the Thanksgiving table and Christmas table and is still in good order. What other begonia or, indeed, what other flowering plant is there that would have withstood so well a like experience? We know of none. Our columns are open to anyone having a reply.

Cypripedium insigne

Our frontispiece shows a group of this useful orchid in bloom at the greenhouses in charge of M. J. Pope at Naugatuck, Conn. These are not selected from a large number but are the only plants grown there—twenty in all. The pots are from 5-inch to 10-inch and carried in the aggregate 385 blooms. Our object in giving them prominence at this time is to impress on those who are interested the commercial value of *Cypripedium insigne* for cut flowers purposes.

Mr. Pope writes as follows regarding their care:

"These plants have not been disturbed since May, 1902, when they were potted in a mixture of turfy loam, fern root and lumps of old dried cow manure. By this time there is little else but root in the pots, and some of the plants will get another shift this winter. All through the summer, until the first flowers expand, the plants are watered once or twice a week with liquid cow and horse manure combined beside their regular daily syringing overhead.

"After the flowers are all open, the plants are removed to cooler quarters for about two or three months, when water is given very sparingly. The rest of the year they are growing with the cattleyas, where the temperature is from 58 to 65 degrees at night, according to outside conditions, and correspondingly higher during daytime.

"A record of the number of flowers produced since re-potting in 1902 may not be out of place here as showing that it is not wise to disturb cypripediums unless absolutely necessary: In 1902, 75 flowers; in 1903, 156; 1904, 226; 1905, 335; 1906, 385; a total of 1177 in five years. Supposing the blooms had been sold at 10 cents apiece, this would have realized the sum of \$117.10 from twenty plants occupying 45 square feet of benchroom."

Let Horticulture Work For You

If you have anything to sell to florists, gardeners, park superintendents, seedsmen, let this paper sell it for you. It is the cheapest representative you can send out for it reaches thousands of good buyers once a week and the cost is only a trifle. Tell your story in HORTICULTURE'S advertising columns and the best people in the profession will surely see it and read it.

Schlechtes Wetter

Should I happen to come across a Fatherlander of the "rose-house wisdom" variety, and ask his opinion as to the suitability of the weather of the month just past in relation to his business, I am morally certain that I would be answered in the above words, which, for the benefit of those who are not so versed in the German language means "bad weather," a conclusion I cannot other than assent to; for a more sunless, cheerless and changeable weather for a December month would be hard to find. It therefore must have been a trying month for my fellow craftsman, private as well as commercial. While the latter may feel the result of a sunless sky more keenly as affecting more directly the weapons for chasing the proverbial wolf from the door, it does not follow that the former though receiving a stated salary at the end of each month, sunshine or not, provided he otherwise behaves himself, is less affected by weather conditions, for it does affect him as well as his brother florist, if not in the same spot, in that which gives cheer and pleasure to both.

To be assured of a bountiful supply of presentable flowers all around at the yule-tide season, means to the gardener that he will be in good humor for the next six months at least, regardless of salary, and I suppose the florist is closely akin to him in this respect, as he too rises aloft beyond the mere pleasure a bank account affords. But here comes the rib that I had in mind when I started this note. Anxiety on the one hand to procure the wherewithal to successfully circumvent the aforesaid wolf while the season is propitious and on the other hand to secure a large supply simply to please, has an element of some danger. And in this direction I would say, that it is the wise person, not to say experienced, that does not yield to temptations, particularly while Nature is against him, for what at best can be but a fleeting advantage.

The person that takes his plants through with the least constitutional weakness under prolonged adverse circumstances as prevailed in the month just past, or any other month similarly disadvantageous, is one who knows his business, and his assets are more likely to be continuous and bulky at the end of the year than they would be had he undermined the vitality of the stock by overforcing.

To provide against, and meet as well as that can be done, the bad effect of a lengthened continuance of such weather as we have been contemplating, calls forth the subtlest skill of the plantsman's art, and I know of no more scientific plan in plantsmanship than that which relates to airing and watering under all conditions, and especially the conditions that I have been relating. Those are the situations calculated to test the true merits of the plantsman, when, I divine, our friend, the "mechanical fellow," would necessarily take a back seat, or otherwise go through an uncommon course of complicated schooling.

H. Imbison

AMERICAN CARNATION SOCIETY.

The Convention at Toronto One of the Largest Gatherings in the History of the Society.—The Exhibition.

The opening session of the convention at 7.30 P. M., Wednesday, was one of the largest gatherings in the history of the American Carnation Society. Hon. Mortimer Clarke, Lieutenant-Governor of Ontario, delivered a most cordial address of welcome, dwelling upon the close union of sentiment between the people of the United States and Canada, of which the carnation is a fitting symbol, and hoping for a still closer union. Alderman J. J. Graham, chairman of the civic reception committee and R. J. Score also spoke in similar vein. C. W. Ward, in responding on behalf of the Carnation Society, spoke of the vast resources of Canada and the high qualities of Canadian people and predicted future greatness in all lines of horticultural and agricultural development. President J. H. Dunlop was then introduced and after a few cordial words of welcome read his address which was received with approving applause.

President's Address.

Ladies and Gentlemen, Members of the American Carnation Society:

It is with more than ordinary pleasure I welcome you to this the sixteenth annual convention of this progressive and important organization. At our last convention of Boston words of welcome were extended by His Honor, the Mayor, by the secretary of the Massachusetts Horticultural Society, in the absence of its president, the president of the Gardeners' and Florists' Club and replied to by members of this society, men who have by their untiring zeal endeared themselves to us and who have by perseverance and industry advanced to that high plane which few of us hope to attain. I referred to the Boston welcome on account of the historical connection and the traditional history of that good old Commonwealth. But you are welcomed tonight to one of the newer or more modern cities, one that is only beginning to feel the impulse of commercial activity and has not that traditional history of which our last convention city could boast, but none the less hearty and loyal. Toronto welcomes you with the true British hospitality that is ever found where the Anglo-Saxon tongue is spoken. Let us here express this wish: May the ties that bind the two greatest English-speaking nations, of which Canada is a part, and I may say the brightest gem in

the British Crown, never be severed, but be welded more closely together in the bonds of Love, Esteem, Friendship and Commercial Union.

We feel highly honored in having you with us on this the first time that the society has met outside of the United States, more especially so as the membership from the Dominion has been very small. It was not the numerical strength of the Canadian members that brought the convention to Toronto, but the good feeling, the magnanimous spirit and the desire to assist in showing the people of this country the progress and improvement that has taken place in the development of the Divine Flower. It is of the greatest importance that the educational feature of such an exhibition of carnations as we have in the Exhibition Hall should be taken advantage of, not only by those who are growing them, but also by the public, who are our best critics, for it is they who are our support and to them we look for approval of our product; certainly, if the public do not patronize our wares, it matters not how much we cherish any particular variety. It is they we have to please, and they whom we should encourage to see the flowers in all stages of development at our greenhouses, and to express their opinion on what we are producing, criticizing as it were, thus becoming familiar with the varieties by name, color, etc., and the public like to be consulted and have a knowledge of the different varieties.

We have long looked forward to this time when we could present such a magnificent show and bring to our city the men who have been instrumental in producing such grand flowers, men who are revered by every lover of the Divine Flower, and whose names will ever be remembered as those who by their love and devotion to their chosen calling have given to the world the best that has ever been.

There are not many things that I can speak of in this address that would be considered new, as we on this side feel ourselves students and desire to be taught, but there is one matter of particular importance to all, and I feel that if we can we should find a solution or formulate a plan by which we can put it in operation in an intelligent and practical way, and that is, What should qualify a new variety for the American Carnation Society's certificate of merit? What has been said and done at previous conventions along this line has hardly been satisfactory, or has been found to be defective in some particular. At our last convention at Boston a committee was named to bring in a report, but it was received at the last afternoon session and too late to receive that attention a question of so much importance deserves. It should be considered both from the originator's and the buyer's standpoint, both should be considered.

The man who devotes his time and brains to the hybridizing of carnations should receive every encouragement from the society, also the grower who buys the new varieties largely from the description of the originator and from the awards that have been made both from this society and the various exhibitions at which the variety was shown. It may have scored high as seen at the various exhibitions, but there may be some of the most essential points of a first-class commercial variety lacking. The question is how are we to arrive at a solution? How are we to ascertain if the variety contains the points that go to make up a profitable variety for the average commercial grower? These should be carefully considered, and when the certificate is awarded it should be a guarantee that these points have been ascertained and proven. The more closely we guard our awards, the more closely we scrutinize these points, so much more will the trade generally rely confidently on the endorsement of this society and should enhance the value of any variety having the endorsement of this society. But let us guard jealously the awarding of this certificate and let it be all that the name implies. We know how closely every award is made, how closely every point is scrutinized in the old land, and as a result the award is accordingly prized by the recipient, for he knows his product has been deserving or it would not be awarded.

Another matter that should receive our attention is the increasing work of the secretary. With the growth of the society his work has increased in a much greater ratio. During the short time I have held office as your president I know the amount of correspondence must be considerable, as from my end he has had reason to know we were working. There is the compiling of the premium list, soliciting advertisements, etc., the compiling of the annual report and the preparatory work for each convention, etc. It might be well for this meeting to consider the question and suggest some means of lightening the work either by granting an assistant for a stated time each year or the purchase of labor-saving appliances and not to exceed a certain sum to be named by the society. Above all, let us recognize our secretary's ability and make him feel by our words and actions that we appreciate his services. Nothing makes one feel more energetic than to know he has your sympathy and support.

This convention will have served its purpose if it stimulates a still greater interest in the Divine Flower in our broad Dominion. We have not been as quick to recognize the importance of the carnation as our American brethren, and for that reason the development has not been as great as we would desire, and we hope that in visiting the greenhouses of this sec-

tion where carnations are grown that you will criticize our work and not be slow to point out our mistakes. We note with interest the popularity of the carnation in England, also that the American varieties are being largely grown, and from the comments in the horticultural press the varieties are giving very general satisfaction.

I trust that your stay with us may be both pleasant and profitable and thank you for the honor conferred on me by electing me your president, and before concluding I also wish to thank the gentlemen composing the different committees who have worked so harmoniously and zealously in completing the arrangements for this convention.

Secretary Herr followed with his annual report:

Secretary's Report.

Mr. President and Fellow Members:—

Your secretary reports having issued the usual printed matter during the year and mailing the same as issued.

There were two deaths reported to the secretary during the year—those of Mr. Lewis Ullrich, of Tiffin, Ohio, and J. L. Dillon, Bloomsburg, Pa., the first two that have been reported during my term of office. Mr. Valentine, of Denver, Col., several years back, made some remark about a suitable offering being sent in such cases. There was no action taken in the matter, and I would suggest that an offering be adopted as representative of this society, and upon similar conditions arising again, the secretary be empowered to wire a florist in the city of the deceased, to send such offering with the society card.

Like most human beings, your secretary is subject to errors, lapse of memory and the losing of important documents, perhaps more so than the most of them. The last year three of these errors happened to get into our premium list: First, the substitution of the name of Eugene Dailedouze for that of Wm. Scott, as judge; second, the use of the name of O. R. King Co., Ltd., instead of the King Construction Co., in the award of a special; and last, but not least, the loss of copy for a half-page ad. and a \$10.00 special, and the non-appearance of either in the premium list. When my attention was called to this, I offered to have ad. and premium both printed on a postal card and send it out to every member, at my own expense, but this offer was not accepted.

The advertisements in the premium list amount to \$231.50. These advertisers are worthy of your patronage. This is the only means whereby we can secure the revenue necessary for the expense of this society, expenses that are increasing faster than the membership. To secure these advertisements, your secretary wrote almost three hundred personal letters, in addition to the printed notices sent all members, and the showing does not measure up with the amount of time and labor expended. Every member of this society who has anything to advertise should use this premium list; it is not money thrown away and is the only contribution the society asks, aside from your annual dues of \$2.00.

Your president, Mr. J. H. Dunlop, has given the secretary much valuable assistance during the year, and has certainly well earned the honor attached to his office.

Treasurer Dorner rendered his financial statement for the year.

The following paper by John Birnie was then read by Herman Simmers:

Are There Too Many Carnations Introduced?

By John Birnie.

Are there too many new carnations introduced? This is the question put

JOHN BIRNIE.

to me by the American Carnation Society. I think it will be quite safe to give a negative answer to the question.

PERFECTION NOT YET REACHED.

Beautiful as the American carnation is at the present time the summit of perfection has not yet been reached and generations yet to come will find the goal still in front of them. There was a time—some fifteen or more years ago—that carnation growers throughout the country looked a little askance at the "new carnation," and not without good reason. We had at that time an avalanche of new carnations many of which were found to be worthless, causing considerable loss and disappointment to those who bought them, and with those new carnations several new diseases were introduced which created quite a commotion in carnation growing circles. Strenuous efforts were made to cure or overcome those diseases by the use of quack nostrums, but in many cases the cure was found to be worse than the dis-

ease. It might be said here, however, that those diseases never put experienced growers to any great inconvenience; and introducers gradually becoming aware of the fact that carnations grown under proper treatment and natural conditions were immune, those diseases finally disappeared, and today are never seen on any properly handled establishment.

BENEFIT OF A. C. S. TO GROWERS.

Introducing a new carnation at the present time is, however, an altogether different matter to what it was fifteen years ago or before the advent of the American Carnation Society. This society has surrounded the legitimate introducer with such restrictions as will make it absolutely impossible for him to introduce a new carnation which has not got at least good qualities enough to make it desirable in some branch of our business. Under the resolution passed at Boston, the much coveted certificate of merit will be harder to get than ever, seeing the carnation has got to score the required 85 points or more on the exhibition table, and also be examined at the introducer's establishment. This I think, is a step in the right direction, and for the first time makes the certificate mean something to the intending buyer. Hitherto the certificate of merit has only been a sort of special prize for specially selected flowers cut from plants which have been specially treated so as to produce blooms large enough to attract special attention on the exhibition table. This proves nothing, except that the varieties exhibited can, by intensive cultivation, be induced to produce large flowers. As to how many flowers can be produced per plant we are left to guess; neither have we any idea how those varieties will act under ordinary treatment. This new departure will, if it is ever put in force, be of great help to the intending purchaser of new carnations; in fact, it appears to be altogether for his benefit and protection. Such being the case all expenses incurred by the examining committees however appointed, should be paid by the society, even if this necessitate an increase in the annual dues to do so. The introducers, or promoters, could hardly be expected to pay directly for what is so obviously advantageous to the buyer, and might not always be of equal advantage to themselves.

SUGGESTED WIDENING OF SCOPE.

I am also of opinion that the field ought to be widened by reducing the scale a little, as I believe many carnations that would not score 85 points on the exhibition table, would, when examined growing on the bench, be found to possess other good points, such as health, productiveness, habit, etc., which would make them desirable for commercial purposes, and probably prove more profitable than the larger varieties. Many of our best paying commercial carnations today would have no show on the exhibition table. The society might with propriety go a step farther and keep a watchful eye on every new carnation from the time it is registered until it makes its debut after receiving its final certificate, and also inquire into the merits and demerits of all new carnations whether they are introduced through the medium of the American Carnation So-

ciety or otherwise. Those committees might also, with propriety take a walk through the introducer's propagating house, just to have a look at those "selected" cuttings, and see if conditions are all right. It is said that cuttings which go in there in good condition often come out with weakened constitution and other ailments which make them of little value to those who buy them. Only by adopting some such methods will the American Carnation Society give the purchaser of new varieties the protection he is entitled to, and at the same time make it impossible to introduce "too many new carnations."

SHOULD STRIVE FOR FRAGRANCE.

Our present day carnation introducers seem to be directing their efforts more to increasing the size of the flower than anything else, and their success in that direction is wonderful, but while they are struggling for size, it looks as if they were losing sight of one of the chief attributes of the carnation, namely, fragrance. The only two varieties in commerce at the present time which retain the much-admired clove scent are Flora Hill and Boston Market. A carnation with the color and size of Enchantress and the fragrance of Boston Market would be an acquisition worthy of the efforts of our introducers. Or is strong fragrance a characteristic of the white carnation as it is of the white verbenas? However that may be, an effort in that direction would not be amiss. Taste demands fragrance, just as fashion demands color.

COMPETITION OF ENGLISH GROWERS.

Size, however, is likely to be the main aim of the American introducer for some time to come, and the successful efforts of their British brethren in the profession to improve the carnation will furnish the incentive. We read of Malmaison carnations 8 inches across, and also of some crosses between English and American varieties which the Englishmen claim are improvements on the latter. Under those circumstances, the American introducer is not likely to rest on his laurels; evidently there are foemen worthy of his steel on the other side of the water.

VARIETIES FOR POT CULTURE NEEDED.

Hitherto our introducers have devoted their entire attention to the development of the carnation as a cut flower, but there is another phase of carnation advancement which they have altogether neglected, although they have had numerous hints regarding it both in the trade press and from the platform. I refer to the carnation for pot culture. We need a race of dwarf carnations of every shade of color. Colors that could not be used in the cut carnation would be very desirable in this class, and fragrance should be one of its prominent features. A race of carnations of the kind mentioned would mark an epoch in the plant trade. They could be grown in ordinary pots for the general plant trade, or put in pans or vases for decorative or holiday purposes. They could be flowered at any time without undue forcing, and would certainly make a far more satisfactory house plant than the short-lived although pretty azalea. They could also be used for summer

planting and would fill a long felt want in that direction, as I think it is extremely improbable that a carnation which would prove to be entirely hardy in our northern latitudes will ever be produced. There won't be "too many carnations introduced" until this much-needed class receives the attention it deserves.

INTRODUCERS SHOULD BE ENCOURAGED.

Any effort to discourage carnation introducers in their endeavor to improve the carnation would be a mistake. Those whom we might call our professional hybridizers have got hybridizing down almost to a science, and with the magnificent varieties now at their command as subjects to work on, decided improvements may be looked for in the near future, both on this and the other side of the Atlantic. The 4-inch flower may materialize at any time, but that will not satisfy the ambition of our carnation introducers. To them one step in advancement only suggests another, and when the 4-inch carnation is an accomplished fact, they will with characteristic perseverance reach out for one still larger.

In the discussion which followed W. N. Rudd remarked that the paper contained some good things and some rank heresies. Some people expect brains, horse sense and business experience all for two dollars per year. He had no patience with a man who expects the seal of commercial value on carnation certificates.

Invitations for the meeting for next year were presented from Indianapolis and Washington. The nominations for officers was the next business and resulted as follows: Wm. F. Gude, J. R. Freeman and Fred H. Lemon for president; Peter Bisset and Adolph Baur for vice-president; A. M. Herr for secretary, and F. E. Dorner for treasurer.

William Gammage then read a paper on "Carnations from a Canadian Point of View." He said that it was his observation that Canadians have a speculative faith in the future, as all are building greenhouses in modern ways and largely for carnation flowers. Cultural methods have to keep pace with the developments of today, and the carnation's popularity is on the increase.

The report of the judges was then read. A discussion of the status of Nelson Fisher as to eligibility in the Lawson class followed, and Messrs. Rudd, Ward and Lemon were appointed a committee to establish a rule on this question for the guidance of exhibitors and judges.

At Thursday morning's session the reports of committees were in order. The committee on change in methods of awarding certificates reported that they were unable to agree on a practical plan. Discussion brought out the consensus of opinion that it is impractical to send special committees to inspect varieties growing, and that nothing of value could be thus gained. It was voted to abrogate the rule to this effect adopted last year.

H. M. Altick made a final report on the McKinley fund, and a vote of thanks was passed appreciative of his efforts. The sum of \$100 was appropriated for this fund in the name of the society.

The color classification committee

recommended a new classification which was adopted for use in the schedules. The report of the nomenclature committee followed:

Report of the Nomenclature Committee.

Mr. President and Fellow Members:

Your committee reports the registration of the following carnations during the past year:

Splendor by Stevenson Bros.

Harvard, Georgia and Faust by James D. Cockroft.

Pocahontas by Baur & Smith.

Red Chief, Winona and Bonnie Maid by F. Dorner & Sons Co.

Lucile by J. D. Thompson Carnation Co.

Toreador by The H. Weber & Sons Co.

Red Riding Hood by Chicago Carnation Co.

Mrs. Robert Hartshorne by Malachi Tierney.

Welcome by Dailedouze Bros.

The registration of "Welcome" is provisional and subject to the approval or disapproval of this Society, it being a pink sport of Mrs. T. W. Lawson, and will be on exhibition at the meeting.

Registration is getting to be quite a bit of work. One of the above registrations was effected after an interchange of eight letters, several of the others required three and four, owing to the fact that the list of names that have been used is clumsily large, and also, to the fact that some introducers of new varieties do not take the trouble or do not care to go to the expense of registration.

From the amount of space given by our trade papers to this matter of registration, there is no excuse for any originator not to know that when he names a carnation, the proper thing to do is to have that name registered with the Society at once, the cost being but \$1.00 per name, and it is not obligatory to be a member of the Society to have a variety registered.

We, therefore, again recommend that no variety under name be allowed to compete in the exhibitions of this Society unless said name has been properly registered, either with this Society, or the S. A. F., and that this rule be in force for our next exhibition, with the privilege of registration the first morning of the exhibition for those who may have previously neglected it or who do not know of this rule.

We would also recommend that all names registered previous to 1896 be eliminated from the working list of this committee.

Respectfully submitted, Albert M. Herr, A. Herrington, Eugene Dailedouze.

After some discussion it was voted that the registration of the name of a variety should be a prerequisite to the award of certificates of entry in competitive classes. The recommendation to eliminate all names used previous to 1896 was not agreed to. Welcome was accepted as a name for the Lawson sport of Dailedouze Bros. The report as amended was adopted.

Telegrams of congratulations were received from Peter Fisher of Ellis, Mass., and Peter Bisset of Washington. An invitation to visit the Dale estate on Friday forenoon was accepted.

It being announced that William

Two Weber Seedlings.

NO. 24, '02.

TOREADOR.

Carnation No. 24, '02, was described in *HORTICULTURE* last year as follows:

Parentage, a deep pink seedling and Lawson. Height and habit very similar to Lawson. Flower is considerably larger, better formed and of better and more even color. All shoots come from the base of plant, the stems be-

ing practically bare of any side growth. Size 3 to 3 1-2 inches.

The variety described last year under No. 9, '03, has been named Toreador by Messrs. Weber and, as the following description shows, is a descendant of No. 24, '02. The description is as follows:

"In color, a very much improved

Prosperity. Parentage, Prosperity x No. 24, '02. Ground color is white, heavily overlaid with scarlet, barring a broad distinct zone of pure white on the edges of the petals. The latter are deeply serrated. It has the stiff stems of the pollen parent, and as long as Prosperity. In size it is equal to Prosperity at its best."

Scott of Buffalo had suffered a stroke of paralysis, a telegram of sympathy was ordered to be sent.

R. O. King's paper on "Greenhouse Construction" followed with black-board illustration.

THE EXHIBITION.

The exhibition was large and the blooms were of a superb quality and high average. The Boston exhibitors were very unfortunate on account of delay in the express delivery, being twenty-four hours late, but everything was in good order when unpacked and staged on the second day. The exhibition hall was cool and all the flowers kept in excellent condition.

The silver medal for vase of 100 blooms, any variety, any color, was won by Cottage Gardens Co., with Alma Ward; the bronze medal in the same class by Dailedouze Bros., Brooklyn, N. Y., with seedling 348. The S. A. F. silver medal was won by Cottage Gardens Co., with Alma Ward and the bronze medal by Bassett & Washburn with seedling No. 20.

The silver cup donated by the Canadian Horticultural Association for six vases, 50 blooms in each, distinct varieties, went to F. R. Pierson Co. The silver cup offered by the Steele, Briggs Seed Co., for six vases of 25 blooms each, distinct varieties, and the silver cup offered by the R. W. King Co. for the best 100 blooms in four varieties, four vases, went to W. J. Lawrence, Eglinton, Ont.

Silver cup offered by the H. Dale Estate for 100 blooms to be disseminated during 1907, to C. W. Ward for Beacon.

Ten dollars in gold by J. H. Dunlop,

Toronto, for best 50 blooms white, to R. Witterstaetter for seedling 1009.

Ten dollars in gold for, best 25 blooms, pink seedling or sport darker than Enchantress and lighter than Lawson, never before winning a prize or medal, to Dailedouze Bros., for seedling No. 348.

Ten dollars in gold offered by W. J. Lawrence for best 50 blooms not more than three varieties, for growers with less than 20,000 feet of glass, to E. Crowhurst.

Five dollars by J. H. Dunlop for best 12 blooms, private gardeners only, to M. Tierney.

Five dollars by George Vair for best 25 bright red blooms, to A. J. Guttman for Victory.

A certificate of merit was awarded to E. Reimels for seedling No. 32.

The first prizes in the various classes were as follows:

Vase 100 blooms, white, Chicago Carnation Co., Joliet, Ill., with White Perfection; 100 blooms Enchantress shade of pink, Chicago Carnation Co., with Enchantress; 100 blooms Lawson shade of pink, Chicago Carnation Co., with Aristocrat; 100 blooms Scott shade of pink, F. R. Pierson Co., Tarrytown-on-Hudson, N. Y., with Winsor; 100 blooms scarlet, Cottage Gardens Co., Queens, N. Y., with Robert Craig; 100 blooms crimson, Cottage Gardens Co., with Creole Beauty; 100 blooms any other color, J. E. Haines, Bethlehem, Pa., with Imperial.

Class B, open to all varieties disseminated prior to July 1, 1906:

Vase 50 blooms white, Chicago Carnation Co., with White Perfection; 50 blooms Enchantress shade of pink, same with Enchantress; 50 blooms

scarlet, Guttman & Weber, with Victory.

Class C, open to all varieties disseminated prior to July 1, 1905:

Vase 25 blooms white, Chicago Carnation Co., with White Perfection; 25 blooms Lawson shade of pink, Dale Estate, Brampton, Ont., with Lawson; 25 blooms crimson, E. Crowhurst, with Harlowarden; 25 blooms any other color, Dale Estate, with Nelson Fisher.

On Thursday morning the judges reported additional certificates to R. Witterstaetter for Afterglow, 87 points; A. Roper for Bay State, 85 points; H. Weber & Sons Co. for Toreador, 87 points, and the \$25.00 silver cup donated by the Montreal Gardeners' and Florists' Club to the exhibitor making the largest display, to F. R. Pierson Co.

NEWS NOTES.

The Miami Floral Co. of Dayton, O., has increased its capital stock from \$30,000 to \$50,000.

The Minneapolis (Minn.) Park Board held its annual meeting January 19th, electing the following officers: President, J. E. Northrup; vice-president, E. W. Decker; secretary, J. A. Ridgway; attorney, C. J. Rockwood; superintendent, Theo. Wirth.

W. W. Rawson of Boston observed his sixtieth birthday on January 23, by a banquet at the Hotel Vendome. Included in the large company were Governor Guild, Lt.-Gov. Draper, members of the governor's council, and many members of the various political and fraternal organizations with which Mr. Rawson has been affiliated.

NEWS OF THE CLUBS AND SOCIETIES

THE 38TH ANNUAL MEETING OF THE NEBRASKA STATE HORTICULTURAL SOCIETY.

This meeting held in Lincoln, Jan. 15, 16, and 17, marks something of a new departure. There has been hitherto a rehash of horticultural matters; for instance apples, peaches and cherries, varied with cherries, peaches and apples. It was suggested that this time we should have our annual report a sort of text-book, so after the address of welcome by Dr. C. E. Bessy, Tuesday afternoon, the first thing on the program was the planting of fruit trees, by A. J. Brown of Geneva, one of the most practical men in the state whose experience has run through a long series of years in the trying climate of Nebraska. The usual discussion followed. The planting of small fruits was assigned to G. S. Christy of Johnston. Mr. Christy is an expert along these lines, having been engaged for a long time, successfully too, in growing small fruits. His paper will be an authority on this subject.

Planting evergreens was assigned to Chas. A. Scott of Halsey. Mr. Scott is the superintendent of the government planting on the Dismal River, where it is proposed to plant about a half a million of acres. Mr. Scott is both practical and enthusiastic along this line and no man who has ever taken up work in our great state has had a more splendid opportunity, and he and Mr. Mace, his helper, are equal to the emergency. They have already done wonders and not only this, they are encouraging others also, and through their influence large tracts of hitherto worthless lands will be among the most beautiful and attractive in the state.

How to plant ornamentals—trees and shrubs, peonies and perennials, was discussed and a lot of valuable advice was given. The meeting was one of the best and was carried on smoothly from start to finish. H. S. Harrison, youngest son of C. S. Harrison, was chosen president for the ensuing year.

Park and Forestry Society.

The annual forestry meeting was held in the Agricultural Building at the State farm. It was well attended. Several matters of prime importance were discussed.

One-third of Nebraska is a waste of sand and yet a sand bank is an invitation to a conifer. The U. S. government are planting on a large scale. A bill was framed to go to the legislature to have the Governor appoint a commission to secure from the U. S. tracts of land for the State to plant to evergreens. The State has also several hundred of acres of what are termed saline lands, without salt enough to injure them, and an effort was made to have the State transform these lands with a park; and as they are near Lincoln, the capital, such grounds would add much to the attractions of the city.

The raising of catalpa for posts was also discussed. Actual tests showed that in 18 years land planted to this tree brought in an annual rental of \$10 per acre. Over a million of dol-

lars a year go out of the State for fence posts. All this should be retained and thousands of acres should be planted to this valuable tree.

C. S. HARRISON,
Pres. Park and Forest Society.

NORTH SHORE HORTICULTURAL SOCIETY.

This society held its regular meeting in Manchester, Mass., on Friday, Jan. 18th, President McGregor in the chair.

On motion of Mr. Jackson, Herman Thiemann of Belchertown was elected an honorary member. President McGregor appointed as a committee on essays and discussions, Messrs. Till, Mitchell and Allen. Messrs. Baker, Till, Morrison, Wetterlow, Parsons and Allen were appointed as banquet committee for the current year, with instruction from the chair to arrange for the annual dinner at an early date. Messrs. Jackson, Sanborn and Baker were appointed to convey by letter to Mr. R. C. Hooper and Miss Hooper the sympathy and condolence of the society in their recent bereavement. Mrs. Hooper will be greatly missed in and around Manchester, where the Hooper summer residence is located.

Herbert Shaw read a very instructive paper on "Annuals," the trend of his remarks being not so much towards new varieties, but the better care and cultivation of the older and more reliable sorts. An interesting debate followed. The question of imported annual seeds was touched upon, and from general remarks the writer would judge that the imported article is no improvement over that furnished by reliable domestic seed houses. It was voted to continue the subject at the next meeting. There were a large number of members present, and from present indications the year 1907 is to be the banner year of this society.

WILLIAM TILL.

ST. LOUIS HORTICULTURAL SOCIETY.

This society has been organized with the following officers:

President, Henry Young; vice-president, Alex. Waldbart; secretary, Otto G. Koenig; treasurer, Fred C. Weber.

The objects of the society are to encourage and promote the practice of horticulture, to labor in harmony with kindred organizations whose aim is to stimulate public sentiment in favor of amateur gardening, and a love and pride in beautiful environments. To hold stated horticultural exhibitions, to establish a bureau of horticultural information, issue pamphlets to exploit the art, give lectures and in every manner assist the public in their horticultural wants.

At a meeting held on January 14, it was voted to hold a flower show at some date during Lent, this year.

GARDENERS' AND FLORISTS' CLUB OF BOSTON.

At the next meeting of the club on February 19, Charles W. Ross, of Newton, will read a paper on Road Construction. Other interesting features are being arranged for.

W. N. CRAIG, Secretary.

CARNATION NIGHT IN PHILADELPHIA.

The next meeting of the Florists' Club of Philadelphia will be "Carnation Night," date of which is Tuesday, February 5th. John E. Haines, the carnation expert of Bethlehem, Pa., will deliver a paper on his experiences with carnations.

Exhibits of all meritorious novelties are invited by the committee in charge and it is to be hoped all the very best will be on hand so that the progressive florists of Philadelphia—the horticultural center of the country—may have an opportunity of examining them carefully, and as a consequence placing their generous orders for those which meet their fancy. Please ship prepaid care David Rust, Horticultural Hall, Broad St. above Spruce, Philadelphia, Pa., and they will be properly taken care of upon arrival.

N. B. It would be better to forward them a day sooner than is sometimes thought necessary so that they may be sure to arrive on time, as on former occasions some shipments from a distance have been delivered a day late.

All interested in carnations are invited to be present whether they have superior varieties to exhibit or not.

EDWIN LONSDALE, Secretary.

NATIONAL ASSOCIATION OF RETAIL NURSERYMEN.

The organization held its fourth annual banquet January 22, at the Eureka Club, Rochester, N. Y. About one hundred gentlemen were present. John D. Lynn officiated as toastmaster. C. J. Maloy of Ellwanger & Barry spoke on the "Square Deal," W. J. Gillette on the "Political Deal," Chas. E. Ogden on the "Nurserymen's Deal," and there was a deal of other speaking by eminent speakers. Among the guests were Orlando Harrison, of Berlin, Md., president of the American Association of Nurserymen; E. Albertson, Bridgeport, Conn., chairman of the Executive Committees and official representative of the American Association of Nurserymen; Professor John Craig, of Cornell University, Ithaca; George S. Josselyn, Fredonia; D. H. Henry, C. G. Chase and Theodore J. Smith, Geneva; O. D. Green, Syracuse; George C. Perkins, John Watson, C. H. Stuart, William W. Gould, Arthur M. Christy, Newark, N. Y., and W. T. Wood, Richmond, Va.

The committee in charge of the dinner was made up of B. F. Allen, chairman; W. W. Wyman, E. S. Osborne and Charles L. Yates. The president of the National Association is William Pitkin, of this city.

CHRYSANTHEMUM SOCIETY OF AMERICA.

The president of the Chrysanthemum Society of America on assuming office would be glad to consider any suggestions which may appear to be for the good of the society. Lovers of the Autumn Queen are invited to communicate their ideas, and the hearty co-operation of every member of the society is most desirable for the ac-

BEACON CARNATION

(ORANGE - SCARLET)

Try Beacon, if only a few. You'll want all you can raise of it the next season.

Originated at Ellis, Mass.

**HAS AGAIN
DEMONSTRATED ITS COM-
MERCIAL VALUE
THIS SEASON 1906-7**

One of the
most productive
Carnations
ever offered.

It has been grown and tested by the following:—

The Cottage Gardens Company, Queens, N. Y.	-	5,000 plants
Mr. E. A. Stroud, Stafford, Pa.	-	1,000 "
The Park Floral Company, Denver, Col.,	-	50 "

They were all delighted with it.

At Ellis, Mass., we have - - - - - **20,000 plants**

complishment of the success which should be ours.

The year is before us with all its grand possibilities; let each one contribute their share of interest, and the good results will be gratifying to us all. Let there be no drones in the hive of the C. S. A. during the year 1907.

DAVID FRASER, Sec'y.

LENOX HORTICULTURAL SOCIETY.

The regular meeting of this society was held January 19th, President Heeremans in the chair. All arrangements are made for the annual dinner which is to take place February 2nd, at the Curtis Hotel, Lenox. This is going to be a red letter event. Mr. Thos. Proctor was awarded a first-class certificate for some excellent spikes of *Euphorbia Jacquinæflora*, which were remarkably well grown, being five feet in length and with large trusses of flowers.

CLUB AND SOCIETY NOTES.

The Western New York Horticultural Society held their annual meeting in Rochester on January 23 and 24.

At the annual meeting of the Horticultural Society of Niagara Falls, Ont., on January 9, Thomas Berriman was elected president and T. J. Robinson, secretary.

About fifty were present at the nineteenth annual banquet of the Montreal Gardeners' and Florists' Club at the Lakeview House, Lachine, on January 16, which was pronounced the best

affair of its kind ever given by the club.

At the annual meeting of the Rhode Island Horticultural Society on January 16, in Providence, M. M. Burdick was elected president and Charles W. Smith, secretary and treasurer. This will make Mr. Smith's twentieth year of service in this capacity.

The New Hampshire Horticultural Society held their annual meeting on January 17 at Concord. The officers were re-elected with the exception of the secretary; Prof. H. F. Hall takes the place of W. D. Baker who has filled the position acceptably for thirteen years.

The newly organized Southampton Horticultural Society (N. Y.) held its first meeting on January 14 and elected the following officers: President, H. W. Clark; vice-president, W. F. Halsey; recording secretary, B. C. Palmer; financial secretary, Wm. Gray; treasurer, Julius King.

BUSINESS CHANGES.

The partnership between Ludwig Mosbaek and L. I. Risser has been dissolved, but the business will be continued under the name of the Mosbaek Greenhouse Company of Onarga, Mr. Risser, who is president of the Iroquois Canning Co., retaining his interest therein.

Wm. Mundy of Salem, Ohio, has sold his property on McKinley avenue and bought land outside the city. He will remove the greenhouses and build in the spring.

PHILADELPHIA NOTES.

We had a pleasant call on Monday and Tuesday from Isaac H. Moss, M. McRichmond and several others from Baltimore on a tour of inspection of the growing establishments in this vicinity.

Another new grower enters the arena. The baby this time is yclept Victor Groshens. He has purchased 20 acres at Hillside adjoining the Towill and Fahrenwald ranges and will devote himself to growing roses. Mr. Groshens has been superintendent of the Graham place at Logan for many years. Two houses 29x500 will be the first nucleus. The Lord and Burnham Co. through their Philadelphia manager, D. T. Connor, have the contract.

The feature of the Pennsylvania Horticultural Society's meeting on the 15th was the primulas exhibited by William Fowler. They were awarded a first and a certificate of merit. William K. Harris, an expert primula grower in days past, declared they must be two-year plants. But Mr. Fowler said they were but one year from seed. They were certainly very fine.

The Leo Niessen Co. have already got their up-to-date ice machine installed in the basement of their new building. They expect to move in about February 1st. The whole of the first floor will be occupied by the receiving and shipping departments. The offices will be on the second floor. Arthur Niessen tells me that all the fittings will not only be up to date but "1910 style" which means ahead of date some!

MABELLE

New Pink Carnation for 1907

Color—A peculiar shade of lovely pink, with a faint yellowish cast; several shades lighter than the Lawson. Unlike most Pinks, the brightest sun does not injure the color. **Size**—3 to 4 inches in diameter when established. **Odor**—Pleasing, but not strong. **Stems**—Invariably strong, but always graceful, ranging from 12 to 30 inches during the season. **Habit, etc.**—A very quick, active grower, making specimen plants in a short time, even from late cuttings. On account of its rapid growth, requires supporting very soon after benching. Gets away rapidly, blooms early and gives long stems right from the start. **Productiveness**—Prodigious is the best word we know of to use here. It is the most incessant bloomer early and late, we have ever grown. Stock limited. Delivery January 5th to 10th and later.

Price \$12.00 per 100, \$100.00 per 1000

THE H. WEBER & SONS CO., Oakland, Md.

JOHN E. HAINES,
The Leading Scarlet

brilliant color, fine stem, the most productive ever introduced, blooms early until thrown out in July, no extra grass. All shoots make flowers. Watch the papers and see what growers say about it. None but well-rooted, healthy cuttings leave the place. Rooted cuttings ready Dec. 15, 1906.

Price, \$8.00 per 100; \$50 per 1000.

MAXFIELD & DIMOND, Mfr., P.O. Box 3040, Warren, R.I.

Seed Trade

Preparations for the Cannery convention are going on apace and it is quite safe to predict that the quality and extent of the displays both by individual firms and by the local committees will eclipse any previous convention held by the cannerymen. As might be expected of Buffalo, electricity is to be a prominent feature of all decorations and some beautiful effects will be produced.

In the matter of entertainment this convention will excel anything previously attempted. Special arrangements are being made to give the ladies a good time, a unique feature being a trip to East Aurora and a visit to Elbert Hubbard and the Roycrofters. It is planned to serve lunch to them there and no doubt the visit will be heartily enjoyed.

An "At Home" will be tendered to the packers and their friends by the Machinery and Supplies Association, which will be a very elaborate affair. The various officers' rooms at the Armory are to be fitted up to represent the different nations. For instance, there will be an American, a British and a German room, and probably others, and in each will be served refreshments both solid and liquid characteristic of that nation. This entertainment is scheduled for Wednesday evening. A theatre party is to be given on Thursday evening by the American Can Co., and there will be other minor attractions. A record attendance is looked for.

The Bell and Howe Telephone Companies have agreed to give free local and long distance service to those attending the convention between the hours of six p. m. and nine a. m., from Monday until Friday night.

Last winter at Atlantic City some twenty odd seed firms were represented, while not over ten are members of the association. It would seem more dignified on the part of those who wish to attend the convention to join the association instead of simply being camp followers. This is a reproach which seems to apply to seedsmen more than to any other business, and it is often commented on by their colleagues in other lines.

The great decline in the demand for seed peas from market gardeners and farmers it is pretty well understood by the seedsmen is mainly due to the large and increasing consumption of canned peas, and this applies especially to the leading restaurants and hotels. This is due to various causes, but chief among them is the labor or servant question. The farmer cannot get the peas picked after raising them, particularly in the vicinity of any large city, while the hotel or restaurant cannot get them shelled. The cannerymen are making an effort to cater to this trade by packing peas in gallon cans, thus saving to the proprietor of these establishments fully 10 per cent over the standard can.

In 1890 something less than 200,000 cases of peas were packed in the United States, and these mainly in Baltimore, while in 1906 the country's pack was in round figures 4,600,000 cases, of which New York State and Wisconsin supplied something over one-half. It can safely be said that with an average crop, 1907 will produce over 5,000,000 cases; yet the consumption has kept

HENRY F. MICHELL CO.

1018 Market Street,

PHILADELPHIA, PA.

pace with the output, and with the largest crop on record prices of both "spots" and "futures" are higher than ever before.

While peas, corn and tomatoes are the large items of the packers of vegetables, there are others such as string beans, beets, spinach, pumpkin and squash, the output and consumption of which are constantly increasing. These facts are of interest to the seed trade because the cannerymen look to them to supply the seed from which all of these goods are grown, but a word of warning may not be out of place here.

Don't imagine any kind of junk will do for the canner. He is getting to be a critical buyer of seeds and while he may be inveigled into buying junk once, the same dealer will not fool him twice.

It is a matter of regret that a few seedsmen will sell anything to the canner on which they can make a few dollars discrediting not only themselves but the entire seed trade. Should a suit be brought against any of these firms by the canner, it is doubtful if they could make a successful defence, and it will readily occur to the reader why such a suit might not be an un-mixed evil.

The House Committee on Agriculture decided Jan. 22 to recommend the discontinuance of free seed distribution by Congress. Instead of appropriating the customary \$250,000 for this purpose the committee will advise that this sum be used to purchase rare seeds to be distributed by the Department of Agriculture.

HIGH GRADE BEGONIAS and GLOXINIAS

The Leading Specialists and Largest
Growers of High Grade Asters
in the World

FIVE NEW VARIETIES FOR 1907

Vick's Sunset

Companion to Daybreak and Purity; in color a delicate pink shading to a deep rich pink in center. Profuse bloomer. Price per packet, 25c.; 2 packets, 40c.

Vick's Upright

Long, graceful stems branch out at the ground and grow directly upward. Flowers are symmetrical, double and full to the center. Splendid for cutting. Especially valuable for shipping. Price per packet, 25c.; 2 packets, 40c.

Vick's Royal Purple

An offshoot from the Branching. Unlike its parent, it sends out stems close to the ground. A medium early variety but lasting until late in fall. Nearly every stem produces specimen flowers. Price per packet, 20c.; 2 packets, 35c.

Vick's Branching Rosy Carmine

A new color in the Branching class. Leading florists pronounce it a shade which will be popular with the trade. Price per packet, 25c.; 2 packets, 40c.

Vick's Cardinal

The best bedding Aster ever introduced. A good one for cutting. With its profusion of flowers and brilliant coloring it makes a handsome showing. Price per packet, 25c.; 2 packets, 40c.

OBITUARY.

James Braik.

The death of James Braik, assistant superintendent of parks of Buffalo, N. Y., which occurred on January 16, takes away one of the most honored and capable men in the profession. The cause of death was the sudden recurrence of a severe attack of rheumatism from which he was convalescing. Capt. Braik has served most efficiently as assistant superintendent of parks since 1887, and during this time has endeared himself to a host of horticultural friends, who found in him a whole-souled, companionable gentleman. During the time of the Pan-American Exposition and the S. A. F. convention held there, visitors in the fraternity had many occasions for gratitude for courtesies freely extended by Capt. Braik. He has been a member of the S. A. F. since the Detroit convention in 1899. He is survived by his widow. Captain Braik was born in Scotland 58 years ago, and previous to his removal to this country he was a member of the 42d Highlanders (Black Watch), and was one of the sentries who watched the crown jewels at Edinburgh. He was a prominent member of the local branch of St. Andrew's Scottish Society, having occupied the position of president from November, 1892, till November, 1893. He retained his love for military life and was the first captain of the Gordon Highlanders of this city. He was a past master of a Masonic lodge before coming to this city, nineteen years ago. The funeral on Saturday, January 19, was under the direction of Lake Erie Commandery.

At a special meeting of the Buffalo Florists' Club the following resolutions were adopted:

"That we have heard with profound sorrow of the death of our esteemed associate, James Braik. His long and

faithful work in the parks of our city and his upright character have endeared him to his fellow workmen and to the citizens of Buffalo.

"In his death the city loses a faith-

THE LATE JAMES BRAIK.

ful, competent and enthusiastic servant, and his associates a staunch friend."

James Mallon.

James Mallon, for over half a century Brooklyn's best known florist, died at his home on January 19, after an illness of two weeks. Mr. Mallon came to this country from Tyrone, Ireland, when a boy of 15, and found employment in Brooklyn and has made his home there since. In 1855 he established himself in business on Fulton Street and later opened a branch store at 20 Smith St. Several years ago he turned over the active maintenance of the business to his sons, but never gave up his personal interest and assistance in it. He was 75 years of age,

a genial, whole-souled man. Two sons and two daughters survive him.

Daniel Daffley.

There has passed away at the age of 86, the oldest gardener in this vicinity, Mr. Daniel Daffley, gardener for Miss Amy Lowell, Warren St., Brookline. Mr. Daffley was born in County Roscommon, Ireland, came to this country when a young man and worked on several private places. Forty-one years ago he went to work on the Baker estate in Brookline, which two years later became the property of the late Augustus Lowell. Mr. Daffley was retained as head gardener, a position he held until his death. A man of retiring disposition, beloved by all who had the pleasure of knowing him.

James Sharkey.

James Sharkey, for the past three years greenhouse foreman for R. & J. Farquhar & Co., Roslindale, Mass., died on January 11, aged 55 years. Mr. Sharkey had previously been employed on the estates of Prof. C. S. Sargent and Mrs. A. W. Blake, and on the Boston Public Grounds under superintendent Wm. Doogue. He was an all-round gardener, and to his care and skilful pruning is due much of the health and symmetry of the trees in the Commonwealth avenue parkway. He was a native of Ireland.

ABOUT NAPHTHALIN.

In connection with the use of Naphthalin against plant enemies (p. 34 of our issue of Jan. 12th) a correspondent reminds us that the "moth balls" or "coal tar camphor" of our shops, consist of Naphthalin, so that our gardeners can easily obtain the material to try its efficacy. As the vapors, in the confined space of a greenhouse, may be dangerous or fatal to some plants, it will be well to use some caution in experimenting.

NEWS NOTES.

Charles L. Stanley, Plainfield, N. J., has moved to 159 East Front street.

B. R. Clark of Baltimore, Md., has disposed of his greenhouses to C. B. Hoffman.

The will of the late George Ellwanger of Rochester, N. Y., is to be contested by relatives.

Articles of association have been filed by the Crabb & Hunter Floral Co., of Grand Rapids, Mich.; capital, \$20,000.

W. H. Graham of Manchester, Vt., is installing a new heating plant and making many improvements in his greenhouses.

Carl Beers of Bangor, Me., has taken over the Mt. Hope Avenue Greenhouses which he built and from which he retired three years ago.

The stock and fixtures in the store of "Penn the Florist," on Bromfield street, Boston, was considerably damaged by smoke and water on the night of January 21. A fire in the basement of the building was the cause.

The high wind of Saturday night broke one of the large plate glass windows in the store of John Breitmeyer's Sons, Detroit. Fortunately the window fell on the street, thereby avoiding damage to the fine display of azaleas and the beautiful Italian fountain.

Carl Wehn, of 2427 Jerome avenue, New York, a seed and supply dealer formerly employed at Thorburn's, was seriously injured on January 11 by an accident on the elevated railroad. Ten ribs were broken and other internal injuries received. He has a wife and two children. A companion who was with him at the time was instantly killed.

Schlegel & Fottler, Boston, have adopted a shipping tag of rather novel design. The card is red on both sides with white lettering, and on the back is a half-tone view in Franklin Park.

CUT FLOWER MARKET REPORTS

BOSTON The condition of the market in all lines of stock at the present time is summed up in the one word "scarcity," with the exception of violets and lily of the valley. The weather of the past week is accountable for the condition which prevails and dealers do not look for an improvement for a few weeks. The demand has taken everything in sight, many orders going unfilled.

Unfavorable weather was **BUFFALO** had the past week up to Saturday which was another ideal spring day. A fairly good week's business was had. Roses, especially Brides, were scarce; Beauties were not abundant and prices held firm. Other stock sold considerably better than the previous week. Carnations of good quality cleaned up nicely; tulips and other flowers sold well. Mignonette of finest quality is to be had, also freesia and lily of the valley. Violets are coming in normal supply and selling quickly. Greens are in fair supply.

Another week of the **COLUMBUS** worst weather possible, rain every day, and no sun. The whole trade are very hopeful, nevertheless, that some settled pleasant days will bring some good business. Business has not been by any means bad, but the weather conditions have held the orders back. Stock of all kinds is coming in, especially good quality carnations, the best of the season thus far. Roses are selling well, especially some fine Liberty; violets are lower. The seedsmen are beginning to receive the first advance orders, and are getting quite busy, with every indication of a fine business ahead. Things are prosperous here.

DETROIT While I am writing a severe cold wave is following a terribly slushy week. Stock is very scarce, especially roses. The delegation to the Toronto convention from this city will be large. Recent visitors in Detroit: B. Eschner, Philadelphia; A. Ringier, Chicago; J. E. Rolker, New York.

The weather conditions hampered **INDIANAPOLIS** trade, the entire week being warm, rainy and disagree-

able. Stock in some lines has been short but enough to supply demand at fairly good prices. Roses outside of Brides and Bridesmaids have been somewhat off crop in this vicinity and fancy Beauties are still bringing top prices. Carnations all colors are in heavy supply with a slight shrinkage in prices. Miscellaneous stock such as daffodils, tulips, freesia, lily of the valley, sweet peas, etc., is in fair supply and sells well. Some nice lilac is offered at a stiff price. There is an unusually good call for ferns, palms and flowering plants for this time of the year; growers have no trouble in disposing of good azaleas. Greens of all kinds are enough to meet all demands.

Business conditions **LOUISVILLE** have improved, there being a little better demand for stock. Carnations and roses of good quality can be had in adequate quantities, and sell well. Violets and lilies of the valley are plentiful, and the latter are rapidly disposed of. Hyacinths, narcissus, etc. are too abundant.

Receipts of roses are **NEW YORK** very light; in fact not in years has the same condition prevailed. Plants are not producing, and there is no immediate prospect of an increased supply. Carnations help to fill in the gap, and quotations are much higher in consequence. Even violets are not blooming freely though there are plenty of these to go around. Lily of the valley is selling better than last week, and so too are cattleyas which have been slow to move up to this week. Bulbous stock holds up well in price on account of the scarcity of roses. Nothing is going very cheap. Even green stock clears out very well. Business in general is rather quiet.

All kinds of flow- **PHILADELPHIA** ers are very scarce at present on account of the unusually dull cloudy weather which has prevailed almost without interruption since the new year. Cut and color have both suffered especially in roses. Beauties are of course scarce and high-priced. The quality however is very fair considering the adverse conditions. Brides and Bridesmaids are not near as good as

they should be. Killarneys are fine as to size but deficient in color. Richmond is now very much better than Liberty, and has suffered less from the objectionable bluish cast which is inevitable during cloudy weather with dark roses. Golden Gates are plentiful. Carnations are off crop considerably and prices have hardened a little. The new Fisher scarlet Beacon has made its appearance from the Stratford greenhouses of Edward A. Stroud and meets with a warm reception. The other leaders are Lawson, Enchantress, Robert Craig, Victory, Peary, and Queen. Violets are plentiful with demand slack. Lily of the valley is also a bit draggy although the quality is very fair. Orchids and white lilac are plentiful but prices hold steady. Tulips and daffodils are selling well. The crop of Paper Whites and Romans has now shortened up and the market for same is in better condition. There has not been much of a glut on these this year except one little spasm just after the new year.

Business here is at a **TWIN CITIES** standstill. Prices are high and flowers not the best. The winter thus far has been very unfavorable for the production of good stock; dark weather has long prevailed. Bulb stock and flowering plants are not selling fast, and the reaction after the holidays is really deplorable.

PERSONAL.

John L. Watkins, Sandy Hill, N. Y., is reported to be seriously ill.

Carl Jurgens and wife, of Newport, R. I., expect to sail for Italy on January 29.

William Kleinheinz, Ogontz, Pa., has just returned from a trip to Germany and Belgium.

C. Kern, formerly with J. H. Troy, New Rochelle, has been engaged as superintendent of the John Magee estate, Mount Kisco, N. Y.

E. A. Feters of Detroit has left for Cleveland to look after the affairs of Smith & Feters during the absence of Mr. Smith on an extended trip.

Robert MacNiff, a traveler for Wm. Elliott & Sons, New York, was seriously injured in a runaway smash-up on Long Island, January 10. He is still on crutches.

MR. WILSON'S TRIP TO CHINA.

Mr. E. H. Wilson, who will spend the next two years on a botanical exploration tour in China in the interests of the Arnold Arboretum, sailed from San Francisco for Shanghai on January 8. He will proceed at once to Ichang, at the base of the gorges of the Yangtse, where he will establish his permanent base for the first year. This will be devoted to the exploration of the Tapashan, the great mountain range of Hupeh, that separates the waters of the Yangtse from those of the Han. In February or March of 1908 Mr. Wilson intends to ascend the Yangtse and Min Rivers to Kia-Ting-Fu, in Ssu-chuan, which will be his base for the second year. From Kia-Ting-Fu he will travel overland, by the way of Mounts Omei and Wa, to Ta-Chen-lu, the Chinese frontier town on the highway from central China into Tibet. After exploring the great forests of conifers and rhododendrons in this mountainous region, he will travel north from Ta-Chen-lu in an attempt to penetrate a part of northwestern Ssu-chuan not before visited by Europeans, then descending the Min River valley he hopes to reach Ichang in February, 1909, and return to Boston the following April or May.

By an agreement with the Department of Agriculture of the United States, Mr. F. N. Meyer, who has been in China during the last two years as an agent of the Department, is to collect for the Arboretum during the spring and autumn of 1907, under the direction of Mr. Wilson, on Mt. Wuti, in Sansi. This is one of the five sacred mountains of China, and, owing to its holy character, it is believed to be still covered with the original forest growth. Although Wuti has been visited by Potanin, and later by H. Mayr, little is known of the mountain flora of this part of northern China.

Mr. John E. Thayer, of the Class of '85, has joined to the Wilson expedition a young zoologist to collect the birds, mammals, and reptiles of central and western China, which are still very imperfectly represented in American and European museums.

MECHANICAL WATERING.

By Louis Wittbold.

Read before the American Carnation Society at Toronto.

I have been asked by your secretary to give my views on mechanical watering, and I wish to ask whether any of us believe that the present mode of watering cannot be improved upon. If we look back at the different things that have been accomplished all along the line in greenhouse construction and heating, etc., even in watering, inasmuch as the hose has superseded the can, we certainly must admit that there is always room for still further improvement. It is only a short time ago when all watering in greenhouses was done with the watering can, and we all know with what prejudice the hose was looked upon as a factor in greenhouse work. This prejudice has gradually been overcome until today even our cousins across the water are using rubber tubes to save time and labor.

The improvements in construction, pumping machinery, specializing of stock grown, etc., have made possible a saving of a large part of the labor of watering. Formerly a mixture of different kinds of plants were grown in one greenhouse in one grand conglomeration, and, of course, each different species of plant needed different care and special attention, and the watering pot or hose could hardly be dispensed with, but at the present time, where houses or ranges of houses of one kind of plants are grown when conditions are equal or as nearly equal as it is possible to get them, this has been changed and a watering machine can be applied and the labor of watering, which formerly took hours, can now be done in so many minutes, with less waste of water than with the hose and with more accuracy in its distribution.

The question will, of course, be asked, What have I to prove the above assertions? And I must admit it is a natural question, as talk is cheap and facts are what we want in this year 1907. Gold bricks are good things for the "con game" man, and we can hardly be blamed for being skeptical about things which are not entirely clear to us and familiar with; but is it fair to allow prejudice to put a brake on improvement when every minute of time saved is money in our pocket, and when a labor which now must be attended to by the most experienced can be mechanically arranged so that after it has been studied out to the satisfaction of the proprietor he can give his instructions so that water is given in just the amounts he has by experience found best for the good of the plants.

I have been asked to give my experience up to date, and will say that I at first started using a watering system for syringing palms by running a pipe along underneath the plants in center of bench, using my patent nozzles, which produces a sheet of water

POT MAKERS FOR 140 YEARS A. H. HEWS & Co. Inc. CAMBRIDGE, MASS. KIND EVERY WARE FLORIST

in fan shape, so that when these nozzles are spaced along the pipe they will produce a sheet of water the full length of pipe. Pipe is connected with a swivel wheel so it can be turned, so that if soil only should be watered the nozzles can be turned downward so that soil only is wet without wetting the foliage, and by turning the nozzles upward the foliage can be sprayed. In this way, I was able to water or syringe my palms when required with a saving of at least 90 per cent. of time and labor. I then used system for watering Boston ferns suspended overhead in the greenhouse, hanging a plant directly under each nozzle so that by turning on the water just a little the water will come from nozzle in a solid stream and flow into the pot, just as much as is wanted, causing only the drip from the water that runs through the soil, while with a hose at least 90 per cent. of the water would drop on to the plants below; then by turning on full pressure the plants can also be sprayed or syringed if required. In this way I have been enabled to grow double the amount of stock in my palm houses and with less labor than previously used. I now have a large portion of our two ranges of palm and fern houses equipped both at our Lake View place and at Edgebrook, and am working on more lines right along, as I find the time saved will pay for the outlay in a short time.

The next experiment I made was at Davis Bros.' cucumber houses, Aurora, Ill., and I quote you the following from a letter: "It saves 90 per cent. of our watering labor. We now have the Wittbold system in all houses. Do the watering in an hour, which formerly took twelve hours, and do better work. We are recommending the system to our friends." I wish to say that Davis is using it now for the second winter and is much pleased.

The next experiment was in lettuce at Chamberlain & Bunker's, Fremont, Mich., and the letters I have received from these gentlemen have given me much encouragement. I only mention these two places as a few facts; more would only tire you, and would only be a repetition of what these gentlemen have said. You gentlemen are representative carnation growers. and I wish to ask if a watering system can be applied in palm and fern houses, in cucumber and lettuce houses, why cannot it also be applied in carnation houses?

The pipes and nozzles can be so placed that you can water from underneath the plants, that you only water the soil, or spray upward, from underneath the plants or downward from above, just as the case may require. I am no carnation grower, but from what experience I have had in other lines I say it can be done, and it only needs some one to take up the idea with determination to overcome what obstacles are in the way, as I

firmly believe that mechanical watering is practical and will save thousands upon thousands of dollars every year in labor to the greenhouse man when it is understood and will do better work than can be done in any other way. Let me suggest that steps be taken by the American Carnation Society to determine the value of mechanical watering by experimenting or otherwise during the coming year, so that more definite reports can be had at next meeting.

I assure you, gentlemen, it will be worth your while.

OLD COLONY NOTES.

John Derringer, Quincy, Mass., has the foundation in for a new two-bench sash house to be used for growing geraniums. Mr. Derringer says that the trade in bedding plants shows a substantial increase every year.

Brooks Adams, Quincy, Mass., will dispense for the present with the services of a professional gardener in the care of his grounds, and A. B. Cottman, who has been serving Mr. Adams in that capacity, has terminated his engagement.

Thomas Pegler, who took the Brown houses at Wollaston, Mass., in July, has evidently entered upon the course pursued by Malcolm Orr, who grew violets at this place with marked success. Hydrocyanic fumigation administered with careful attention to detail, to destroy the black fly, and a liberal top dressing of fine manure applied at mid-season, are a part of the methods pursued.

AFTER.

All who saw our exhibit at the Toronto convention last week pronounced the **BAUR CLIP** and **PLYER** for mending split carnations **A Great Success**.—"The slickest thing I ever saw,"—A prominent New York wholesaler; "Every up-to-date carnation grower will have one,"—A grower from Philadelphia; "You've got the only thing,"—A practical grower from eastern Pennsylvania; "I came to see the thing work and am convinced that it is all that you claim for it,"—This from a Canadian grower who brought some hard cases of splits with him and saw us promptly turn them into first class carnations. We solicited no personal testimonials and no personal orders, well knowing that all who saw this up-to-date device working would go home satisfied that he needed an outfit. The way orders have come in since then has proven the correctness of our prediction. **YOU** who have not seen it need it as much as those who did—you more than need it—**YOU MUST HAVE IT**, or drop behind in the procession as an up-to-date grower. It is what you have long been looking for and what you will need every day until settled warm weather sets in. You have racked your brain for some practical means of mending your split flowers, even though you may be only a small grower. You have thought of the good coal and energy you have been wasting every year raising split carnations that found no profitable market. You used clumsy rubber bands and what not to fix them up, only to find that the job was not much better after than before. Here is something that solves your problems as far as it ever will be solved as long as carnations split—as far as it ever needs to be solved—a little practically **INVISIBLE** wire **CLIP** that holds the calyx and petals in their natural position without in the least affecting any other part of the flower. It does not make a wound that will cause the bloom to wilt before its natural time. It is to all intents and purposes part and parcel of the calyx and holds with a grip of iron. **IT CAN'T COME LOOSE**. It is so **PRACTICAL AND FREE FROM ALL OBJECTIONS** that it will make your split flowers, after mending, sell with those that were not split. A flower properly mended with this device is not a split flower—it is a first class flower in every way and serves every purpose that will a flower in which the accident of splitting did not occur. Our **PLYER** for putting on these **CLIPS** is a wonderful instrument—wonderful in simplicity and in the work it does. With a little practice the operator can do the work twice as fast as it can be done in any other way and do it much better. Time is money, and if you both save time and make a perfect job you are doubly the gainer. **SEND FOR THIS UP-TO-DATE OUTFIT TODAY**. Convince yourself. Your money will not be lost, for we will cheerfully return it if you are not fully satisfied with your bargain. Give it a fair trial and it will convince you that it is just what we claim for it and what you have been looking for. It will save its price every few days that you have it and will help to pay your coal bill as it helps to pay ours. Ready about Feb. 10.

BEACON CARNATION

(ORANGE-SCARLET)

Comes as near the ideal Commercial Scarlet as any yet offered.

Originated at Ellis, Mass.

Has been tested four years and proved to be of

Great Commercial Value

**Do you want to wear the smile that won't come off?
CROW BEACON**

Commencing to bloom early in the Fall, it gives a profusion of flowers for Christmas (when scarlet is in demand at remunerative prices) and **CONTINUES THROUGHOUT THE WINTER MONTHS**. It may not score as high on the exhibition table as some, but **WILL FIGURE UPON THE RIGHT SIDE OF YOUR LEDGER** in a manner highly satisfactory.

The blooms, under ordinary culture, average 2 3/4 to 3 inches in diameter, the guard petals are broad, well arranged, and of good substance, the centre loosely arranged and not too full. Color, scarlet with a dash of orange, which lightens up the flower, especially during dull, dark weather, making it very brilliant and attractive. The stem is long, stiff and wiry. Calyx long and seldom bursts (less than four per cent. last winter). It propagates easily. The plant is a vigorous, healthy grower, of ideal habit, and a most profuse bloomer. A night temperature of 50 to 52 degrees suits it admirably.

A bench of Beacon in full Bloom is a sight not easily forgotten

F. DORNER & SONS CO.
La Fayette, Ind.

MABELLE

New Pink Carnation for 1907

Color—A peculiar shade of lovely pink, with a faint yellowish cast; several shades lighter than the Law-on. Unlike most Pinks, the brightest sun does not injure the color. **Size**—2 to 4 inches in diameter when established. **Odor**—Pleasing, but not strong. **Stems**—Invariably strong, but always graceful, ranging from 12 to 30 inches during the season. **Habit, etc.**—A very quick, active grower, making specimen plants in a short time, even from late cuttings. On account of its rapid growth, requires supporting very soon after benching. Gets away rapidly, blooms early and gives long stems right from the start. **Productiveness**—Prodigious is the best word we know of to use here. It is the most incessant bloomer early and late, we have ever grown. Stock limited. Delivery January 5th to 10th and later.

Price \$12.00 per 100, \$100.00 per 1000

Nature's Two Unique and Wonderful "New Creations" in Bush Limas!

Nature has surely surpassed herself! In a single season she has outstripped all efforts of man. In fact, such distinct new types have never even been dreamed of before.

Look at the illustrations shown of the BURPEE-IMPROVED and FORDHOOK BUSH LIMAS, recall to mind the largest and best pods of Lima Beans you have ever seen, and you must agree with us that this is a **most remarkable find**. To learn just what they really are and how they were discovered, kindly study *pages 10 to 15 of THE FARM ANNUAL FOR 1907*. These two most unique new Bush Limas will be worth many thousands of dollars annually to the gardeners of America. They are undoubtedly the "*Greatest Novelties of the Age*."

The Burpee-Improved is an entirely "New Creation." The pods are truly enormous in size, borne in great abundance upon bushes two and one-half feet high by two feet across. The beans are both larger and thicker than those of the popular *Burpee's Bush Lima* or any strain of the large White Pole Lima.

Fordhook Bush Lima This is altogether unique. Nothing like it has ever been seen before. It is the first and *only* stiffly erect Bush form of the fat "Potato Lima." Both pods and beans are twice the size of *Dreer's* and more than half again as large as the *Challenger Pole Lima*.

\$1115.00 in Cash Prizes for 1907

With one prize of \$150.00, several of \$50.00 each, we will pay a total of \$1115.00 on these **Two New Bush Limas**. For particulars, see *page 28 and page 109 of BURPEE'S FARM ANNUAL FOR 1907*.

These Bush Limas are sold only in sealed packets. Each packet contains twelve perfect hand-picked beans. **Per pkt. 25 cts.**—less the discount of one third on Retail Packets,—making **3 pkts. for 50 cts.; 6 pkts. for \$1.00, or \$2.00 per dozen pkts., postpaid and assorted as desired.**

NEW "FORDHOOK" BUSH
LIMA,—Life-Size Pod.

BURPEE'S FARM ANNUAL FOR 1907

"The Leading American Seed Catalog." The "*Silent Salesman*" of the world's largest mail order seed trade. An Elegant New Book of **200 pages** with hundreds of illustrations from photographs, it tells only the plain truth about the very best **SEEDS THAT GROW**.

It describes Grand Novelties in Flowers and Vegetables, of unusual importance, which cannot be obtained elsewhere. If interested, write to-day,—name HORTICULTURE,—and the book is yours.

BURPEE'S NEW "BLUE LIST"

Most complete of all wholesale catalogs of seeds, gives Special Prices to Florists and Market Gardeners. If you have not received a copy, **Write To-day**.

With our usual discount of $33\frac{1}{3}\%$ on Retail Packets, Florists and Market Gardeners (who order *early!*) can obtain **THESE TWO NEW BUSH LIMAS** at the rate of any **3 pkts. for 50 cts.; 6 pkts. for \$1.00; or 12 pkts. for \$2.00**, assorted as desired, and sent by mail, postpaid.

BURPEE-IMPROVED BUSH LIMA,—
Life-Size Pod.

W. ATLEE BURPEE & CO., SEED GROWERS, Philadelphi
BURPEE BUILDING, Philadelphia, Pa.

Masdevallia towarensis

One of the best, if not the very best of the masdevallias, is the exquisite, dainty, sweet little towarensis, a native of Tovar, Colombia. Its pure white, fragrant, pretty flowers attract the attention of almost everyone who sees it. For decorative work where small plants are desired it is unexcelled. Unfortunately, it is not adapted for cutting as its flowers are borne on scapes which are persistent for a long time carrying several crops of flowers.

In the accompanying photograph the scape shown at the extreme left is now flowering for the third time. It matured its first flower in August, another in October and is now carrying two. The old bracts, in the axils of which the flowers appear, are plainly seen in the picture. It is one of the hardiest, very easy to grow, requiring similar treatment to *M. coccinea*, *M. Veitchii* and other popular species of the gems. In a previous note I advised that all masdevallias should have a warmer winter treatment than is generally advised. This is the secret of their successful culture. At present all our masdevallias are making strong, healthy growths and will be in a suitable condition to withstand the hot humid weather in summer, whereas under the old treatment of keeping cool and dry they would scarcely have commenced to grow before the hot weather was upon them.

The editorial page of the issue of HORTICULTURE, Dec. 29th, contains a quotation from Dr. Lindley aptly quoted to show the value of orchids for decorative purposes. The whole of Dr. Lindley's remarks, however, are not strictly true, as a good many orchids do secrete honey, and I think that *M. towarensis* is amongst the number. About this same subject Kerner says:

"Several orchids, especially species of Twayblade (*Listera*) exhibit a channel swollen with sweet sap, similar to the Martagon lily, each perianth leaf of which is transversely by a channel studded with bands

or ramified swelling and filled to overflowing with the abundant nectar secreted in it. In the perianth of the Helleborine (*Epipactis*) the lip is deeply grooved and resembles a boat filled with honey. In *Epipogium* the perianth leaf corresponding to the lip is arched like a helmet or cap and covers the abundant honey there produced. In many other orchids the lower lip of the perianth is produced backward and in the expansion (called the spur in descriptive botany) a quantity of honey is usually hidden."

James Hutchison

Cycles of the Amaryllis

(Continued from Page 5.)

The first of the cycles of the amaryllis extended from 1710 to about the year 1800. Belladonna was introduced 1712, *Reginæ* 1720, equestre 1710, and psittacium as early as 1677. Up to this period, owing to the very few greenhouses there were in all Europe and the limited opportunities for cultivation, and the small demand for flowers, comparatively few plants were grown.

The second and a most important cycle extended from 1780 to 1830, during which time several species were introduced, notably pulverulentum 1819, aulica, two forms, 1820, and stylosum 1821, and numerous very beautiful hybrids were raised between the species *Reginæ*, vittata and aulica, and these hybrids—as Johnsoni and Ackermanni—really opened the way to the raising of the many beautiful varieties of that period. It was in this decade that Dean Herbert, Curtis, Griffin, Ker, and the elder Garraways so ably championed and aided these, their favorites, to a position they so richly deserved.

The greatest cycle, however, is the one from 1830 to 1870. During that time the species ambiguum 1836, solandriflorum 1839, pyrochroum 1863, pardinum 1866, Leopoldi 1869, were introduced, the two latter particularly giving such an impetus to the raising of seedlings, especially those raised by the Messrs. Williams and Veitch. It is from these collections, either directly or indirectly, that a very large majority of all the finer varieties we are now cultivating were obtained and this brings me to the point where, with all the confidence I am possessed of I assert that we are now on the verge of a cycle when the amaryllis will take its place as the most brilliant and effective of decorative plants for all purposes. It hardly seems necessary to call attention to the many forms of treatment to which the amaryllis is adaptable, whether singly in pots, or in pans or plaques, or in baskets of from five to a score or more, as plants, or in vases and other receptacles, as cut flowers.

The superb coloring, of all shades, from the most intense crimsons to the tinted flesh colors, is only to be found in this beautiful family, and when we consider the certainty of having them in flower when wanted, as, either by retarding or forcing they may be

bloomed at any time, as are lily of the valley, their importance is unquestioned. In these days, when the increase in the demand for first rate grown pot plants is such that the supply is not equal to it the amaryllis is one of the most available plants for the purpose. They can be grown as readily and as quickly as the cyclamen if the routine of cultivation is followed as given herein. For this purpose it is important that care be taken to obtain seed of that group in which the vittata branch is the most pronounced, rather than that of the aulica group—the former has from four to six flowers in a scape whereas the latter has only two or three flowers. First-class seed can be had from first-class seedsmen. You do not want seeds of either straight vittata, Johnsoni, Ackermanni or aulica, but the seeds from the modern hybrids—those possessing fine coloring, bearing three or more flowers on a spike, and with good foliage. After the first crop of flowers the careful cultivator will save his own seed from such varieties as have the most desirable properties. They seed as freely as freesias, and are very prolific.

John Thorpe

(The next chapter will deal with their cultivation.)

British Horticulture

A RETROSPECT

In taking stock of horticultural matters in Britain in 1906 the growers have had an exceptional year as to the weather. There was a "record" as regards sunshine. The exceptional autumn enabled immense quantities of outdoor bloom to be marketed. The amount of chrysanthemums sent to Covent Garden market this season was unprecedented. Naturally the prices have ruled very low. The special societies have held successful exhibitions, whilst the new Winter Flowering Carnation Society has held its first show, which was of a very encouraging character. The chief event of the year was the Hybridization Conference in the summer, arranged by the Royal Horticultural Society. A distinguished gathering of experts assembled from all parts of the globe, and the discussions were of a profitable and practical character. At the Royal Botanic Gardens at Kew, Sir Wm. Thiselton Dyer, the director, has retired, and has been succeeded by Col. Prain, formerly of the Calcutta Botanic Garden. The Royal Horticultural Society has had a busy year, with a record of prosperity. The Royal Botanic Society whose headquarters are at Regent's Park, has not been so fortunate. There have been some stormy meetings at which several members have freely and forcibly criticised the managing body.

ARBOR DAY

British people have been somewhat slow to adopt the American custom of observing Arbor Day. Thanks to the enterprise of Mr. E. D. Till, some progress has been made with the movement at Eynsford, in Kent. The event was lately carried out when a number of trees were planted in the village by the lady students of the Swanley Horticultural College. The first observance was at the Queen Victoria Diamond Jubilee in 1897. The school bank was planted with a row of trees, arranged in emblematic form to spell the text from Proverbs, "My son be wise." An orchard of

cider apples, and a variety of fruit trees by cottagers and farmers were also planted. On the year of the Queen's demise there was planted a row of emblematic trees, recording Tennyson's line, "She wrought her people lasting good." On one occasion a weeping lime, a plane, and a sycamore were planted in the village to commemorate the relief of Mafeking, Lady-smith and Kimberley during the South African war. An effort is now being made to further popularize Arbor Day in this country. There are numerous places where it would be advantageous to secure the shelter of trees and to improve the landscape. Fortunately local authorities are realizing the importance of making some provision in this respect, although there is a great deal to be done before our cities are able to offer the tree-sheltered avenues which are the delight of Paris.

SOME NEW SWEET PEAS

There is no lack of novelty in the sweet peas now being offered by the leading British raisers. The great attention which is being given to this branch of horticulture by the trade testifies to the increasing popularity of this annual. Messrs. Dobbie & Co. are sending out Mrs. Collier, which received a certificate of merit last year from the National Sweet Pea Society. It is of a primrose tint, and blooms are of good size and substance, and freely produced. Albatross is a fine white, and Blush Queen is of the tint its name implies, a useful variation from Gladys Unwin. These are also Messrs. Dobbies' introductions. Mr. C. Breadmore, a well-known prize winner, is making a specialty of Helen Lewis, which was awarded the National Sweet Pea Society's silver medal as the best novelty of 1905, and their first-class certificate. The standard is of a delicate shade of orange, which contrasts well with the deep rosy salmon wings. The form is of the Countess Spencer type. Mr. Breadmore also has Tweedy Smith, a new bi-color, and Cecil Crier, a handsome bloom of a deep, rosy pink tint. Amongst his other recent introductions are George Herbert, with rosy magenta standards, and deep carmine wings; Evelyn Breadmore, pearly white; and Lady Cooper, a lavender self.

SOME WEM NOVELTIES

Growers always look forward with interest to the novelties emanating from Mr. Eckford where a large proportion of the present day favorites were raised. There is a useful batch which are likely to be in demand for show purposes. The Queen of Spain won unstinted praise at last year's shows. It is described as a soft pink of ivory clearness, and the stout stems enhance its value for decorative work. Agnes Eckford is a bold bloom of an exquisite shade of pink, and the plant is of a robust character. Horace Wright, named after the former secretary of the National Sweet Pea Society is an advance on the existing blues, and it is likely to be as popular as its namesake. Earl Cromer offers a delightful combination of tints very pleasing to the eye. The bloom is of a crimson lake hue; the back of the standard is overlaid with a rich red chocolate tint, the inside of the standard and wings being shaded with soft lilac. Frank Dolby is a lavender blue, similar to Lady Grisel Hamilton, and E. J. Castle is of a striking bright rose, shaded with pale soft salmon.

W. H. Adsett.

The Cyclamen for Christmas

The cyclamen will repay the grower for any thought or care he may expend and to have a full bloom for the Christmas sales no detail should be neglected. Our method which has given us a good measure of success is as follows: We get the very best seed obtainable and sow about August 1st. We find seed pans better than boxes for seed sowing. Use a compost consisting of one part loam, one part sand (not too finely screened) and three parts leaf mould. Place the seed one-half inch apart over the surface, cover lightly and firm the soil and water in. The pans should be on a shady bench with a temperature of about 60 degrees. Cover with glass or sifted sphagnum until the seed comes through, then remove to a bench where there is more light, but the same temperature. Our especial aim at this stage of growth is to keep the young plants stocky. When they have two or three leaves they are ready for two-inch pots and the soil should be the same as before. If the potting is carefully attended to the plants will scarcely feel the shift and in about six weeks the strongest may be taken out and potted up. Watering is a most important matter at all times. We depend entirely on syringing until the plants are in three-inch pots, going over them two or three times a day according to the weather.

From January on the young cyclamens make a rapid growth, a certain percentage always stronger than the rest, and the potting should be carried on as required, never letting any become pot-bound. Towards the end of May we remove to the frame house with sides open and through the hottest part of the day we use shading cloth, say from 10 A. M. till 4 P. M. Careful watering and syringing are essential points during the hot months and we have found plunging the pots half way in peat moss a great saving of labor as it reduces the watering one-half. July brings to the final potting of the earliest plants and for this we use the following soil: Three parts leaf mould, two of fibrous loam, one of well-decayed cow manure and one part sand. Care should be taken not to pot deeply; half the corn should be left above the soil. We use new pots for this shift, giving a generous amount of drainage, say, one large crock and some charcoal. As the nights begin to get cool we remove to a light airy house giving the plants plenty of room and all the sunlight possible. The night temperature from 55 degrees to 58 degrees with a rise of from 10 degrees to 15 degrees in the daytime. When the buds begin to show we give weak manure water once a week, using sheep manure, Clay's fertilizer and soot as a change. It is never wise to give strong manure in any form nor to raise the temperature high.

The treatment described above matures our plants by Christmas but should you want the bloom to be later 50 degrees of heat through the night will be ample.

John H. Price

Overbrook, Pa.

Growers' Organizations

The banding together of growers has met with such dismal failure in so many cases that to reopen the subject may cause many to smile. But the Rogue River apple growers of Oregon have a society which has been a success for so many years that one is led to believe that they have hit upon one or two essential points.

As a rule the apple growers, the pear men, the peach raisers or whoever they may be have, after uniting in some kind of a society, by mutual agreement tried to boost prices. As a result they have been mired by the largeness of the task. They have not encouraged competition, in fact, they have fought rather shy of it. And here is the first point scored by the Rogue Riverites. Instead of going to their local buyer and saying, "Take it at our price, or leave it," they begin to estimate the crop as soon as the thinning is done, and then send a statement of the exact conditions broadcast throughout the country, asking everybody who is interested in fruit buying to come and bid for the entire crop. Thus the growers protect themselves by calling into play competition among the buyers. It may be said that the buyers will combine. Even if this is done the growers will obtain the best prices. Such combination has not occurred, however, the instinct of self-preservation still being strong, especially in the heart of a fruit buyer.

A second point, and one well worthy of consideration is the sorting. No Rogue River man sorts his own fruit. He calls in his neighbor who will sort much closer because of his unbiased judgment. A box marked with the society's stamp is known to tell the truth about the contents, and such confidence commands the very highest prices.

It is too often true that the commercial fruit buyer will take advantage but he is only human, and too often has been educated into it by the tactics of his growers. Every man with a little fruit tries to gamble as hard as he can with it and he looks on the buyer as legitimate prey.

Grow a good article, stand behind it, affix a fair price and when you get it don't be like the young woman who told her uncle she would be perfectly happy with two hundred dollars. He, wishing to see such a sight as a thoroughly satisfied woman, gave her the money only to hear her remark as she left the room, "I wish I had made it three hundred."

R. J. Adams.

Let Horticulture Work For You

If you have anything to sell to florists, gardeners, park superintendents, seedsmen, let this paper sell it for you. It is the cheapest representative you can send out for it reaches thousands of good buyers once a week and the cost is only a trifle. Tell your story in HORTICULTURE's advertising columns and the best people in the profession will surely see it and read it.

being a disappointment. Hybridizers who keep this in mind and are successful in the efforts to intensify fragrance in the progeny produced will, we think, find that they have made no mistake in so doing. The carnation's popularity will be materially strengthened when fragrance shall have "caught up" to present achievements in size, color, and form.

The communication in this issue concerning Growers' Organizations among the fruit producers, from the pen of

R. L. Adams, has some very familiar strains in it for anyone who has had to deal with the problems of wholesale cut flower marketing. The agreement to submit all sorting and grading to one's neighbors is especially interesting, and has something in it that makes it worth watching. The results of the arrangement will be observed with interest, and we hope Mr. Adams will make a later report on its workings. Fruit marketing and flower marketing have considerable in common and we all have much to learn.

Preparing
for the Queen of Flowers

We publish in this issue the list of special trophies which have been contributed towards the premium list for the annual exhibition of the American Rose Society which is to open in Washington, D. C., on March 13. A perusal will convince anyone that the Washington brethren and the rosarians generally are fully determined to make this event the equal (or better) of the great event at Boston last March which was, in many respects, the most notable occasion in the history of rose culture in America. The regular schedule of the American Rose Society together with these special prizes and the liberal premiums offered by the Washington Florists' Club in the general exhibition classes, would seem to insure a fine display and a large gathering of the craft. The rose, in its relation to the florist trade and to the public, is certainly worthy of all the pre-eminence that can be given it on this important occasion and the Rose Society should have the loyal enthusiastic support especially of every one whose livelihood depends in whole or in part upon the prosperity of the Queen of Flowers.

The Carnation
Society and its debtors

The Toronto carnation convention was a success from every point of view. The society is stronger, fraternal relations have been established anew, incentive and encouragement have been absorbed and carried to remote places, the literature of the carnation has been enriched and the industries which hold fellowship with the divine flower will reap material and permanent benefit. Second to none in the functions of such an organization is the bringing into cordial personal relations men widely separated but with a common aim, the making of friendships which, working ever as a unify-

We are conscious of a lively responsive sentiment when reading John Birnie's plea for a better recognition of the qualification of fragrance in the production and the judging of carnations. A carnation or a rose devoid of fragrance is to the average

Fragrance
a chief attribute

ing force, endows the organization with irresistible strength and vitality. How lamentable it is that the great majority of those most directly affected by the work the societies are doing are so insensible of the benefits they participate in and the obligations they are under to the societies and to their more public-spirited fellows who are contributing and doing what they can for the uplifting of their profession. The convention was a success but it would have been an immeasurably greater success had each beneficiary of the Carnation Society's activities done his duty.

An Oppressive Boiler Inspection Law Proposed

In the Boston Journal, January 17, there appeared an article under the head of "Boilers Inspection Bill Kills Lap-Seam Type." After reading it through I thought it would come pretty hard upon the florists and others using that style of steam boiler. The paper says, "First and foremost it aims to put the lap-seam boilers out of existence," then again, that "lap seam boilers shall not be installed except that they be vertical internally-fired hoisting boilers." I procured a copy of the bill (Senate No. 61) at the document room in the State House.

Market gardeners, farmers and florists have hitherto been exempt from the inspection laws. Section 78, Chapter 102, of the Revised Statutes says:

"No person shall have charge of or operate a steam boiler or engine in this Commonwealth except boilers and engines upon locomotives, motor road vehicles, boilers in private residences, boilers in apartment houses of less than five flats, boilers under the jurisdiction of the United States, boilers used for agricultural purposes exclusively, boilers of less than eight horse power and boilers used for heating purposes exclusively which are provided with a device approved by the chief of the district police limiting the pressure to fifteen pounds to the square inch, unless he holds a license as hereinafter provided. The owner or user of a steam boiler or engine other than boilers or engines excepted shall not operate or cause to be operated a steam boiler or engine for a period of more than one week unless the person in charge and operating it is duly licensed."

Section 80, same chapter, the words "have charge" or "in charge," in the two preceding Sections shall designate the person under whose supervision a boiler or engine is operated. "The 'person operating' shall be understood to mean any and all persons who are actually engaged in generating steam in a power boiler." Boilers used to generate steam for pumps, I think, come under the head of power boilers.

The proposed new law cuts out from the exempted list boilers used for agricultural purposes exclusively. It seems very strange that the latter is taken out of the exempted class and boilers in apartment houses of less than five flats are left in the exempted class. I cannot see how or why boilers in apartment houses are exempted and we are put by the proposed law on the open list. The proposed law, as I can interpret it, means that we will have to have a licensed fireman. I wish to call the attention of all who read this and are users of steam boilers to procure a copy of the proposed law.

Senate No. 61, and also Sections 78 to 86, Chapter 102, of the Revised Laws, concerning boiler inspection and read them carefully, make it a point to see the member of the Senate or House for his district and lay the matter before them and try to get us left on Section 78, Chapter 102, as it reads at present. Copies of the above can be had at the document room at the State House, Boston.

Ex-president Wheeler in the December meeting said, "Stand by the new officers." Yes, that is courtly and pointed advice, which we all ought to observe. Make it possible to have harmony so that the club may keep on its onward way, and to do this give the officers every possible support. And right here I would add that it would be a good thing if the club would take action at once on this boiler question. A club of such prominence would carry much weight with it. Let the executive committee do something tangible at once.

Robert McWilliam

Calanthes

A few weeks ago a correspondent in HORTICULTURE wrote enthusiastically of the gorgeous display of calanthes in bloom to be seen at Whitinsville, Mass., under cultivation by George McWilliam. The illustration given herewith shows a few spikes of those calanthes. In the group are a few *V. luteo-oculata* and *rubro-oculata*, but the rest are of greatly improved types, such as *Veitchii compacta*, a unique variety, and *Veitchii superba*, the result of twenty years' selection by Mr. McWilliam, and the beautiful hybrid *Sandhurstiana*. In the front are two spikes of a white seedling unnamed as yet. It has not yet reached its full strength, but the flowers have a breadth and thickness of petal unapproached in any of the older sorts and are of a pure glistening white. When it is stated that the flower spikes here shown measured from three to four and a half feet in height the beauty of a house with thousands of spikes in bloom may be faintly imagined.

AMERICAN CARNATION SOCIETY.

Washington Secures the Next Meeting—F. H. Lemon Elected President

Delay in delivering of a telegram prevented the announcement of the transactions at the closing session of the American Carnation Society at Toronto in our issue of last week. The first business transacted at the afternoon session Thursday, January 24, was the selection of a place for the convention of 1908. The friends of both Indianapolis and Washington worked like beavers. The knowledge that Indianapolis had already entertained the Carnation Society twice and that Washington had never enjoyed that honor although it had twice asked for it decided the question and Washington was chosen by a close vote, after which the ballot was made unanimous and three cheers were given for the magnificent generosity shown by Indianapolis in inviting the Society for a third time.

During the counting of ballots papers were read on Carnations in England by Herman Simmers, the authors being Messrs. C. Englemann, A. F. Dutton, and Wm. Stacey, also a paper on Carnations in Denmark from Peter Riise and on Mechanical Watering from Louis Wittbold. Mr. Wittbold's paper was presented in full in the last issue of HORTICULTURE.

C. W. Ward gave some of his experience in shipping carnations to Europe. He had found that cuttings shipped after February 1 arrive in bad condition as a rule. Plants from pots give much better results but this is very much more expensive. Referring to the question of hybridizing he said he had long since eliminated the English border carnation as a blood desirable for use in pollinating American varieties and believes that the English growers will also get better results if they confine themselves to the pure American blood.

An extended discussion was indulged in concerning the comparative value of "side shoot" cuttings and so-called "top cuttings." Mr. Ward contended that the top cutting is not so likely to make a flowering plant. Many members explained their methods of taking and making cuttings. Mr. Ward asked for the appointment of a committee to confer with representatives of the American Breeders' Association with a view to a combined exhibition at Washington next year.

It was voted to start a subscription fund for the benefit of the family of the late James Hartshorn and Phil. Hauswirth of Chicago was selected to act as treasurer of same.

Election of officers was next proceeded with, under considerable excitement. The result of the voting was the election of Fred. H. Lemon of Richmond, Ind., as president by a

vote of 54 out of 63, and on motion of Mr. Weber who had presented the opposing name the vote was made unanimous. By unanimous vote Peter Bisset of Washington was elected vice-president; Albert M. Herr, secretary; Fred Dorner, Jr., treasurer; Wm. Gammage, Toronto, Ont., director, and W. N. Rudd, Chicago, judge for three years. The committee on final resolutions, Messrs. Gillett, Gammage and Swayne made report thanking the Canadian florists and the civic officials of Toronto for their generous hospitality.

THE BANQUET.

The banquet tendered to the visitors on Thursday evening was a splendid affair. The spacious banquet hall of the Queen's Hotel was completely filled with an enthusiastic and happy throng. The tables were resplendent with carnations, among which Winsor predominated. The menu was of the best and between the witty or instructive speeches in response to the toasts that followed the lighting of cigars vocal and instrumental music of a high order was interspersed. At the head of the hall the Stars and Stripes and Union Jack were crossed. President Dunlop occupied the seat of honor, president-elect Lemon at his left.

The opening toast to "The King and the President" was followed by the singing of one stanza each of "God Save the King" and "America." The toast to "Canada and the United States" was proposed by Mr. F. R. Pierson. The last meeting, he said, had been held at Boston, which city had set a high standard difficult to equal. It was the home of floriculture, perhaps without its equal in the United States. "I want to say," said Mr. Pierson, "that Toronto has out-Bostoned Boston with the most successful meeting in the history of the society." In referring to Toronto's cordial reception he said:—"We are glad to say that there is no Governor Swettenham in Canada." He applauded the sentiment expressed by the Lieutenant Governor in his address on Wednesday that all commercial barriers between Canada and the United States should be removed. He asked C. W. Ward of New York to respond as a Canadian citizen and Wm. Algie of Toronto as a citizen of the United States. Mr. Ward was very witty in his cross-allusions, many of which elicited merry applause. "I want to tell you Yankees," he said, "that if any of your warships come to Canada we shall endeavor to send them back with the least possible laceration of their feelings." Mr. Algie, who assumed the part of a citizen of the U. S. delivered an address replete with international goodwill. He asserted that he understood his subject as, years ago, he had found

his wife near Boston—a veritable "pink and white Enchantress," and concluded with a recitation which brought down the house.

Mr. R. J. Score proposed the "Mayor and Corporation," the response being made by Alderman J. J. Graham in the absence of his Worship the Mayor. Mr. Graham declared that interchange of the people as in events like this is doing much to weld the friendship existing between the two countries.

A joint toast to the Society of American Florists and the Canadian Horticultural Society was proposed by T. W. Duggan and responded to by president W. J. Stewart and secretary P. J. Hauswirth of the S. A. F., and president Thos. Manton of the C. H. S. Mr. Stewart referred to the blending of the colors of England and America as an exemplification of the sentiment expressed by the great poet of the brotherhood of mankind, whose birthday anniversary would dawn on the morrow and recalled how sixteen years ago a similar blending of the flags had led the S. A. F. to go from Boston to Toronto as the Carnation Society had done on this occasion and to go thence to Washington, the capitol city, as also the Carnation Society had now voted to do. Mr. Hauswirth spoke enthusiastically concerning the coming convention at Philadelphia and urged a large attendance of those present on this occasion. He made also a strong plea for support for the great international flower show to be held in Chicago in 1908. Mr. Manton's theme was that nationalities are forgotten in our profession and that "if we are good gardeners and good florists we're brothers." He quoted lines from Burns "For a' that and a' that" and promised a hearty welcome every time his hearers should come to Canada. Mr. Manton's remarks gave extreme pleasure. A guest sitting near the writer whispered, "Tom Manton gets his patent of nobility direct from God Almighty."

"The American Carnation Society" was proposed by Wm. Gammage, who dilated enthusiastically on its unlimited possibilities. President-elect Lemon, E. G. Gillett and J. A. Valentine responded. Mr. Lemon asked for equal support for next year as had been so freely given this year. Mr. Gillett gave some interesting historical notes in the Society's career. Mr. Valentine avowed that in his visit to Toronto he had learnt a new meaning for the word "hospitality" and voiced his appreciation for the courtesies extended to the Society.

W. N. Rudd was then called upon to present the trophies from the exhibition to their several winners which he did with characteristic placid imperturbability, referring to the affair as the "American invasion," appreciative responses being made by Messrs.

BANQUET TO THE AMERICAN CARNATION SOCIETY AT THE QUEENS HOTEL, TORONTO

F. R. Pierson, W. J. Lawrence, C. W. Ward, Eugene Dailledouze, R. Witterstaetter and A. J. Guttman.

The toast, "The Allied Societies," was proposed by Joseph Bennett of Montreal who said that while the large societies are doing national work the local bodies are equally useful in their respective spheres. W. F. Kasting and H. B. Frankland were asked to respond. Mr. Kasting urged that the allied societies should get into closer touch with each other. He made allusion to the proposed exhibition at Chicago and solicited the help of every organization in making it a success. Mr. Frankland made a good speech, also, eliciting frequent applause. John Chambers being called upon expressed his delight at meeting so many American brethren as guests and extended an invitation for all to come again next summer when the American Park Superintendents are to meet in that city.

The toast to the "Horticultural Press" was presented by H. M. Altick who paid a glowing tribute to the power of the press, without which a successful convention would be an impossibility and extolling its perseverance and fortitude in its uphill work for recognition. J. Austin Shaw responded. Mr. Shaw's address was a classic, full of sentiment, wit and prophecy which we should like to present in full if space were available. Further response to this toast was made by H. B. Cowan of the "Canadian Florist" who told of the fascination of journalistic work and the grand sphere it is destined to fill.

The closing toast to "The Ladies" was done full justice to by the proposer, H. Simmers and the responder, L. E. Marquisee. The ladies had been entertained during the evening at the Princess theatre. It was not far from 2 A. M. on January 25 when "Auld Lang Syne" was sung. During the exercises W. J. Lawrence, the gifted tenor, Mrs. Alice Edwards, contralto,

and the Blight Male Quartette sang several selections in delightful manner, eliciting tumultuous applause and encores that could not be refused.

CANADA'S POSSIBILITIES.

(Extracts from the speech of C. W. Ward in response to the address of welcome to the American Carnation Society at Toronto.)

That which impresses Americans most when they consider their Canadian neighbors is the vastness of the still undeveloped resources of Canada. From the Atlantic to Lake Winnipeg, and from the northern boundary of Lake Superior to near the southern shore of Hudson Bay, are still standing countless thousands of millions of valuable timbered forests, and the same is true along the western borders of the Rocky Mountains, among the Selkirks and bordering the Pacific Ocean from Vancouver northwards to Alaska. While I have no figures to support the assertion, I will risk the opinion that Canada has today ten times the area standing in original forests than now remains in the United States, and the day is not far distant when the largest proportion of the timber consumed in the United States must of necessity be drawn from Canadian forests. Again, Canada has almost exhaustless deposits of both anthracite, bituminous and splint coals, the extent of which have not yet been determined, but which may be fairly said to reach along the base of the Rocky Mountains from the northern border of the United States well up into the Saskatchewan region and possibly to the shores of the Arctic Ocean—the granary of the American Continent. A large proportion of the agricultural lands lying between the Muskoka Lake district and the Atlantic Ocean are particularly adapted to the raising of wheat, barley and oats, and serve to lend additional importance to Canada's immense grain productiveness, and the same can be said of a

large part of the forested area lying between the Selkirk Range and the Pacific Ocean.

A considerable portion of the lands lying along the borders of the United States are well adapted to the raising of apples, pears, plums and cherries, so that the Canadian people need not suffer for the want of wholesome home grown fruits. Canadian florists have already made their mark as expert growers of greenhouse products, and on no part of the American Continent are better and more perfect roses, carnations, chrysanthemums and violets produced than are grown by the leading florists of Toronto and its contiguous territory.

When we come to compare the people of Canada with those of the United States, we find them to be practically of the same type and practically of the same origin. They are essentially American, each as much as the other. They are a vigorous, virile and energetic race, the result of the development of the human family upon this vast American Continent, actuated by the same high ideals of brotherhood, honesty and fair dealing, and both nations bent upon the development of our Continental resources to the utmost. Our people being practically a homogeneous one, there can be no such race differences as exist upon the European Continent, where several radically different types of mankind are cooped up within narrow boundaries which are so densely populated that annual migrations to other sections of the world are absolutely necessary in order to even up the struggle for existence, and we should live in peace and harmony, free for all time from the discords that have perennially arisen among the densely populated nations of Europe. The people of the United States hold the people of Canada in high respect and esteem. They are glad to see Canada develop and the Canadian people prosper. No jealousy or envy of Canadian prosperity exists

among them, and they will always stand ready to greet their Canadian brethren and applaud their accomplishments and exploits, and will always wish Canada "God speed" and the maximum measure of development that she may fulfil to the fullest extent her manifest destiny.

ADDITIONAL NOTES OF THE CONVENTION.

The Boston exhibitors were very unfortunate in having their boxes delayed twenty-four hours through some stupidity of the express company. On their arrival on the morning of the second day, however, they were found to be in splendid shape and staged beautifully—a convincing demonstration of the sturdiness of their growth and a hint as to what might have happened to other exhibits that had won high honors if these consignments had been in competition. Beacon from Peter Fisher was superb; so was Afterglow from Mr. Nicholson, Helen Goddard from S. J. Goddard and Roper's striped seedling Bay State. The boys took their misfortune philosophically—not a whine.

The vases of one hundred were the strength of the exhibition. Ward, Pierson, Haines, Chicago, Carnation Co., and Dailedouze were in the front rank. The comparative scarcity of crimson (or "maroons") in the general display was very noticeable. A few years ago this color was much more prominent. Baur & Smith showed a new variety May somewhat on the order of Fair Maid.

Certificates were awarded to John Reimels' No. 32, Nicholson's Afterglow, Roper's Bay State and Weber's Torador.

A vase of Richmond rose from the Bedford Park Floral Company was one of the most remarkable exhibits staged. Nothing finer has ever been seen in this variety and we hope Mr. Houle, the manager, will show up at Washington with an equally convincing demonstration of the possibilities in this unrivalled rose.

The Steele, Briggs Company showed some very creditable specimens of *Primula obconica*, giant strain, on the stage.

THE VISIT TO BRAMPTON.

On Friday morning a special train of five cars on the C. P. R. conveyed the visitors to Brampton to inspect the immense greenhouse establishment of the Dale Estate. Much has been written about this notable place, its vastness, and the high cultural conditions and methods there in evidence, and on not a few occasions the roses, carnations and lily of the valley produced have found their way to the leading American markets and exhibitions, making short work of the aspirations of local growers. It certainly has lost none of its vastness, but grows vaster. Roses were off crop, but there was a great showing of carnations which, considering the fact that the present is the darkest and most unfavorable winter ever experienced here, were all that could be desired. The "ridge and furrow" houses, tile benches, heating apparatus, ammonia refrigerating machinery and complete modern equipment in all departments were exceedingly interesting to the visitors.

CARNATION MABELLE.

This excellent variety which is being disseminated this season by The H. Weber & Sons Co., Oakland, Md., is recommended as a very profitable variety, requiring about the same treatment and temperature as *Enchantress*. Its description by Messrs. Weber is as follows:

"Mabelle (1907), pink, a few shades lighter than *Lawson*, showing no traces of lavender and purple, but instead is permeated by a faint yellow-

ish cast, making an exceedingly beautiful and popular color. The blooms are large and well formed; under favorable conditions attain four inches in diameter. Odor pleasing, but not spicy. Calyx good, practically non-bursting. Habit not unlike *Genevieve Lord*; a very early and continuous bloomer, giving long stems right from the start. This variety has the much prized habit of producing very early, and keeping it up until July."

MASSACHUSETTS HORTICULTURAL SOCIETY.

The first exhibition for the year 1907 was held at Horticultural Hall, Boston, on Saturday, January 26. *Primulas sinensis*, *obconica* and *stellata* were shown in splendid shape by M. Sullivan, gardener to Wm. Whitman, who took first and third prizes in all classes. Mr. Graham, gardener to C. R. Talbot, who took second on *sinensis*, and Wm. Thatcher, gardener to Mrs. J. L. Gardner, who won second on *stellata* and *obconica*, also by George M. Anderson. Carnations were shown in fair quantity. C. S. Strout won first in white with *Lady Bountiful* and in Daybreak class with *Enchantress*. H. A. Stevens Co. won first in light pink with a salmon seedling, crimson with Harry Fenn, striped with *Variegated Lawson*, and "any other color" with a white and pink flushed seedling. Quinick Greenhouses were awarded honorable mention for *Victoria*, a very shapely flower, *Lawson* pink in color. On violets, Harry F. Woods won first and Norris F. Comley, second, on both double and single.

Warren Heustis & Son, E. L. Lewis and others showed some excellent vegetables.

The lecture in Horticultural Hall on January 26 was a talk on orchid collecting by John E. Lacer. Mr. Lacer gave a very interesting description of the methods and the dangers of this work and the mode of packing, ship-

ping, etc. He said the most interesting and important field for orchid collections is Columbia; Venezuela and Brazil are second and third. He described in some detail his visits to the different orchid regions, and in conclusion stated that the prospects for the future are not encouraging. The search for orchids has led many natives to go into collecting, but in many cases they know nothing of the proper methods of securing, packing and shipping the plants. Last year alone several hundred boxes of orchids came from South America in which every plant was ruined by carelessness or ignorance, and one native can do more harm in an orchid region in one year than a collector would do in ten.

THE ILLINOIS STATE FLORISTS' ASSOCIATION.

The second annual meeting of this society takes place at Bloomington on February 19 and 20, and promises to be a large and very interesting gathering. All introducers of new varieties of roses and carnations are solicited to send blooms for exhibition to George A. Washburn, Bloomington, chairman of exhibition committee. Through the efforts of a committee consisting of A. C. Beal, A. T. Hey and J. F. Ammann the society has secured an increased appropriation of \$1,000 on State fair premiums, and has a Bill before the Legislature for an appropriation of \$25,000, for experimental work in floriculture.

NEWS OF THE CLUBS AND SOCIETIES

AMERICAN ROSE SOCIETY.

Schedule and Programme for the Washington Exhibition.

The Executive Committee of the American Rose Society had a full meeting on Wednesday evening, Jan. 23rd, at the Hotel Martinique, New York city. The interest manifested in the coming show, from various parts of the country, was most encouraging.

The special prize schedule which we have to offer is greater than ever before gathered together and several more will be added to the list, the determination being to make this a very successful exhibit.

A committee was appointed to wait on President Roosevelt and invite his presence at the show as may suit his convenience.

The schedule of the society will be issued within a very few days.

Special Prizes of the American Rose Society.

Fifty blooms American Beauty rose, the "Executive Committee's" prizes: \$50.00, \$25.00.

The Lord and Burnham Trophy, valued at \$250.00, presented by the Lord and Burnham Co., will be awarded in conjunction with the first (cash) prize for fifty American Beauty roses in this class, and will become the property of the competitor winning it twice, consecutively or otherwise. Won once by Waban Rose Conservatories and once by George Burton, Chestnut Hill, Pa.

The best display of cut roses, all varieties. The Dorrance Challenge Trophy, value \$250.00, offered by Benj. Dorrance; the winner to hold the trophy a year and on relinquishing it to the society for another competition, at the end of that period to receive a silver shield suitably engraved, as a permanent record of his having held the trophy.

Fifty blooms of Goldea Gate, Silver Cup, value \$50.00, offered by Geo. H. Cooke, Washington, D. C.

Fifty blooms Wellesley, Silver Cup, value \$50.00, offered by John H. Taylor, Bayside, N. Y.

Best exhibit of Rambler Roses in pots, not less than 12 plants, Silver Cup, value \$50.00, offered by Robert Simpson, Clifton, N. J.

Fifty blooms of Mme. Abel Chateau, Silver Cup, value \$50.00, offered by Traendly & Schenck, New York City.

Fifty blooms Richmond, Silver Cup, value \$25.00, offered by Henry F. Michell Co., Philadelphia, Pa.

Fifty blooms Killarney, \$25.00 in Gold offered by Dingee Conard Co., West Grove, Pa.

Fifty blooms Liberty, \$25.00 offered by W. H. Elliot, Brighton, Mass.

Fifty blooms Bridesmaid, Silver Cup, value \$25.00, offered by S. S. Pennock-Meehan Co., Philadelphia, Pa.

Vase of roses showing the most artistic arrangement in the exhibition, \$25.00, offered by Welch Bros., Boston, Mass.

Fifty blooms Richmond, \$25.00 in Gold offered by E. G. Hill Co., Richmond, Ind.

Fifty blooms of any variety of American origin now in commerce, a Silver Cup, value \$25.00, offered by Alexander Montgomery, Natick, Mass.

American seedling not yet introduced, Silver Cup, value \$25.00, offered by H. O. May, Summit, N. J.

Collection of Hybrid Wichuriana, Silver Cup, value \$25.00, offered by Frank R. Pierson, Tarrytown, N. Y.

Twenty-five blooms Bride, \$12.00 in cash offered by L. B. Coddington, Murray Hill, N. J.

Six or more blooms of any new rose never before exhibited, \$10.00 in cash offered by Mrs. S. C. Briggs, Washington, D. C.

Foliage rose suitable for village door yards, \$10.00 in cash, offered by Benjamin Hammond, Fishkill Landing, N. Y.

Display of Ivory, \$10.00 in cash offered by Benjamin Hammond, Fishkill Landing, N. Y.

Twenty-five blooms General MacArthur,

\$15.00 in cash offered by Edward Hatch, 22 Devonshire St., Boston, Mass.

Prettiest Exhibit, to be decided by three ladies visiting the Washington show, \$5.00 in Gold offered by Miss M. I. Hammond, Fishkill-on-Hudson, N. Y.

One hundred American Beauty, \$100.00 in Gold offered by A. Gude & Bro., Washington, D. C. There must not be less than five entries for this prize.

American Rose Society's Medals for Novelties—General Competition.

Gold medal for the best new rose not yet disseminated, whether of domestic or foreign origin. Exhibits to be judged by the official scale of the American Rose Society, and no gold medal to be awarded to any rose scoring less than 95 points.

Silver medal is offered at the same time and under the same conditions for a novelty scoring not less than 85 points.

It is further ordered that the complete scores of all entries in the competition be filed with the Secretary of the American Rose Society before the award of any medal is confirmed. No duplicate medals will be awarded. It is understood that though the award of gold or silver medal may be made to the same variety from one exhibitor exhibited in different centers, only one medal will be delivered to the exhibitor.

The Executive Committee of the American Rose Society reserves to itself the right of selection of the judges, who shall pass upon the exhibits in the competition for these medals.

BENJAMIN HAMMOND,
Secretary.

DETROIT FLORIST CLUB.

February 6 will be a banner evening with the club, as this is the date for the carnation show. All growers of novelties are invited to exhibit and requested to forward their products to the Michigan Cut Flower Exchange, Detroit. Express charges will be paid by the local club if necessary.

PITTSBURGH AND ALLEGHENY FLORISTS' AND GARDENERS' CLUB.

The regular meeting of the club for January was not held until the 22d, when it was combined with a smoker. At the business session, officers to serve the club for 1907 were put in nomination, detail business was attended to, and the club indicated Mr. E. C. Reineman as their choice to represent western Pennsylvania as vice-president in the S. A. F. Mr. Reineman was a charter member of our club, and no one attends to meetings more regularly or has its interests more at heart. Of independent fortune he retired from active business as a florist several years since, but he has never forgotten his first love or the friends of his old days. He will doubtless make an efficient and able vice-president.

The subject selected by the club for its next meeting, Tuesday, Feb. 5, was "Carnations". Following close as it does on the Carnation convention at Toronto, which was attended by several of our members, it is expected it will be a very interesting meeting and exhibit.

With the close of the business session the members were free to give their attention to the smoker.

There was a minstrel show with amusing "gags" on many of the prominent members of the club, refreshments in great abundance and cards and smoking in profusion. It was the small hours of the morning before the happy gathering dispersed.

H. P. JOSLIN.

DREER'S SUPERB DOUBLE PETUNIAS

For nearly half a century we have been making a specialty of **DOUBLE PETUNIAS** and our strain is accepted as second to none, either here or in Europe. We annually plant many thousand seedlings from which only the finest double fringed forms are selected for propagating purposes, this improving the strain every season, and this year's collection is the brightest and most pleasing one we have yet sent out. We offer fifteen distinct varieties.

3 inch pots, 75c per doz. \$8.00 per 100 the set of 15 for \$1.00.
2 1/2 " " 60c " " 4.00 " " " " " 75c.
SEED OF OUR SUPERB STRAIN OF FRINGED PETUNIAS; Double, 75c per 500 seeds; \$1.50 per 1000 seeds. Single, 50c per trade packet.

Our Quarterly Wholesale List offers a full line of seasonable Plants, Seeds and Bulbs.

HENRY A. DREER, Philadelphia, Pa.

CARNATION WINSOR

We have not advertised Winsor until now because we have not had to. It is so good and its merits have been so generally recognized that it has practically sold itself. Our advance orders were very large, and we did not feel the necessity of advertising it until we were in a position to fill and take care of our early orders. We are now nearly caught up with our advance orders and have a fine lot of stock on the cutting bench, so that we can promise, for the present, February delivery on orders received within a short time at least.

If you have not already purchased a stock of this, you should lose no time doing so. We are going to sell more Winsor than has ever been sold of any novelty that has ever been put on the market. Its merits and value are now so well established that one is not buying a chance. We are cutting and shipping right along between one and two thousand flowers a day to the New York market, where our flowers are sold.

There is nothing on the market that approaches Winsor to-day in carnations. It is the best seller on the market, on account of its lovely color, fine stem, perfect calyx, and fine keeping and shipping qualities—in fact, in this regard it covers every necessary requisite as a market variety.

From a growing standpoint, it leaves little to be desired. It is unusually healthy, very vigorous and productive, and, we think, the most profitable carnation ever introduced. This may seem high praise for a carnation, but it is no exaggeration. Winsor gives a large percentage of high-quality flowers. It practically does not split at all. Notwithstanding the fact that we have had the darkest, duller winter we have ever had, when the Enchantress and Lawson types are splitting badly all over the country with every one, we have not had one-half of one per cent. of split calyxes or Winsor—in fact, we seldom see a split calyx. Hundreds of visitors who have been at our Scarborough place will substantiate this statement, extravagant as it may appear.

Any one who fails to plant Winsor this year will regret it. Rose Pink Enchantress is good, and a good many other varieties are good, but if you want the winner, plant Winsor.

We not only have a good thing in Winsor, but we are delivering good stock. As a sample of the testimonials that we are receiving, see this space in last issue. We are trying to give 110 cents on the dollar, and guarantee to please everybody with the stock sent out, or we will not ask you to pay for it. We have still to receive our first complaint, and we have shipped between one and two hundred thousand cuttings to date.

STRONG ROOTED CUTTINGS, February delivery, \$12.00 per 100, \$100.00 per 1,000.

F. R. PIERSON CO., Tarrytown-on-Hudson, N. Y.

COLUMBUS FLORISTS' CLUB.

The January meetings of our club have been the most successful and valuable to the members of any in its history. We have had very creditable displays of carnations and decorative plants. M. B. Faxon's special prize of a year's subscription to *HORTICULTURE*; went to our president, Sherman Stephens for a splendid display of carnations. In Mr. Stephens' collection were: Victory, Enchantress, Pink Enchantress, Flamingo, Lady Bountiful, and Mrs. Patten; quoting my old friend K. Finlayson, "The conditions which have prevailed during the past two months, call forth the subtlest skill of the plantsman's art"—this display of carnations brought these words to my mind. Other exhibitors were: Fifth Avenue Floral Company, carnations and violets; I. D. Siebert, Pandanus Veitchii; M. B. Faxon, Primula obconica; Robert Currie, Araucaria excelsa; Franklin Park Floral Company, Pink Enchantress. These displays were all good. We have added another new member, Andrew Bluhm, with the Clover Hill Greenhouses. During the evening some very enjoyable music was furnished by Miss Williams and Carl Knopf. The committee on prizes, consists of Messrs. Williams, Bealer, Metzmaier, Torrey and Hills. We had a long discussion regarding coming exhibitions, for it is contemplated holding some good ones during 1907.

TOLEDO FLORISTS' CLUB.

Carnations were the topic at our last club meeting, and it was a pity

that the meeting was so poorly attended, but the severe cold night kept, probably, a good many away. It was a most lively discussion among those present, and the bunch of carnations sent by the Chicago Carnation Co., and which we thought was Aristocrat, gave us plenty of stuff to talk about. The scarlet seedling exhibited by our local friend, Kuhuke, deserves most careful watching; the color is fine, stem good and no faults could be seen with the cut flowers presented.

Having carnations as subject the club decided to have a special carnation show at the next meeting, and all members promised liberal support. Our nearby brothers will be invited, and the club intends to make a special effort to draw a crowd. Of course, this show will only be in the nature of a meeting in our club room, which is large enough to accommodate all we expect to get. It will also help us to bring new members into the club, and new members means new interest.

NEW LONDON HORTICULTURAL SOCIETY.

The annual meeting of this society was held in Norwich, Ct., and officers for the ensuing year were elected as follows: President, Thomas W. Head; vice-president, N. Poe Carey; secretary, A. A. Hunt; financial secretary and treasurer, R. R. Willcox. It was also voted to pay the financial secretary for his services the next year. The treasurer's report was very encouraging there being quite a balance on hand, and we are looking forward to a prosperous year.

SOCIETY OF AMERICAN FLORISTS AND ORNAMENTAL HORTICULTURISTS.

President Wm. J. Stewart of the Society of American Florists and Ornamental Horticulturists, announces the following appointments as Vice-Presidents for 1907:

Ala., E. A. Beaven, Evergreen; Colo., J. A. Valentine, Denver; Conn., Peter Zuger, Hartford; D. C., W. H. Ernest, Washington; Fla., C. D. Mills, Jacksonville; Ill., N. George Asmus, Chicago; Ill., S. F. L. Washburn, Bloomington; Ind., J. A. Evans, Richmond; Iowa, W. A. Harkett, Dubuque; Kan., Oscar Roehr, Topeka; Kentucky, A. R. Baumer, Louisville; La., M. Cook, New Orleans; Md., Wm. Weber, Oakland; Mass., E. L. Pierce, North Cambridge; Mich., W. E. F. Weber, Sault Ste. Marie; Minn., John Monson, Minneapolis; Miss., S. W. Crowell, Rich.; Mo., E. W. C. Young, St. Louis; Mo., W. Geo. W. Kellogg, Pleasant Hill; Nebr., Geo. H. Swoboda, Omaha; N. H., Aug. Gaedeke, Nashua; N. Jersey, C. H. Totty, Madison; New York, E. Chas. Lenker, Freeport; New York, W. C. H. Vick, Rochester; N. Car., J. Van Lindley, Pomona; Ohio, S. J. B. Heiss, Dayton; Ohio, N. Geo. Bayer, Toledo; Pa., E. P. J. Lynch, West Grove; So. Car., C. A. Moss, Spartanburg; So. Dak., C. E. Newbury, Mitchell; Tenn., C. L. Baum, Knoxville; Va., H. Brown, Richmond; W. Va., C. P. Dudley, Parkersburg; Wis., Fred Holton, Milwaukee; Ont., J. H. Dunlop, Toronto; Washington, Amy K. Luffman, Spokane.

P. J. HAUSWIRTH, Sec'y.

BOBBINK & ATKINS,

Nurserymen and Florists,

Rutherford, N. J.

ELBERON HORTICULTURAL SOCIETY.

This society held its semi-monthly meeting on January 21 with President Robertson in the chair. One new member was elected. The chief exhibits were a vase of mignonette, Golden Machet, by P. Murray; Freesia Purity, by A. Bauer; single violets, by A. Grieb; Roman hyacinths, by J. Kennedy; vegetables, by F. Dettlinger. The exhibitors gave a few cultural remarks in regard to their displays which were interesting and instructive.

GEORGE MASSON, Sec'y.

CLUB AND SOCIETY NOTES.

The State Horticultural Society met at Kalispell, Montana, on January 17. Despite the extreme cold weather the display of fruit was excellent.

Prof. Wheeler of the experiment station at Kingston, R. I., lectured before the Newport Horticultural Society on January 22 on the value of soda in plant growth and the experiments made to determine the place it would fill.

The Kentucky Horticultural Society closed its convention at Lexington on January 24. Officers were elected as follows: President, M. F.

Johnson; secretary and treasurer, J. M. Garrett.

The Methow Valley Horticultural Society, Washington, has allied itself to the State society and elected the following officers: President, Dr. J. B. Conche; vice-presidents, A. C. Searle, J. L. Fulton; secretary, H. E. Marble; treasurer, C. J. Carad.

The Western New York Horticultural Society put itself on record at its recent annual meeting as opposed to a law requiring inspection and tagging of fruit. They consider that the buyers are the ones to inspect fruit on delivery.

OBITUARY.

Reinhardt Miller, formerly a landscape gardener of Louisville, Ky., died on January 22 in his eighty-fifth year.

Albert Crawford, a gardener in the Prospect Park greenhouses, Brooklyn, N. Y., died suddenly at his work on January 23.

John Irving, Sr., a native of Scotland and for nearly forty years a resident of Hughsonville, N. Y., died suddenly at his home of January 19.

INCORPORATED.

The Michigan Cut Flower Exchange, Detroit, Mich., has been incorporated, Philip and Fred Breitmeyer, Wm. Dilger and Robert Rahaley, incorporators. This firm started five years ago in a basement on Miami avenue with small capital and much opposition, but the untiring energy of Mr. Dilger has won friends in all directions, and the house now has an enviable reputation. The recognition of Mr. Rahaley's devotion to the firm's interests at this time is well deserved.

NEWS NOTES.

Ludvig Mosbaek, who has disposed of his business in Onarga, Ill., will locate in Minnesota.

Charles Schnell has opened a new retail florist store at 998 Broadway, Buffalo, under the name of "The Rosery."

Two new houses, each 40x200 are contemplated to go up very soon, for lettuce, by David Johnson, a local market gardener, at Toledo, O.

The plant of The Perennial Gardens Co., Toledo, O., is now completed, and the electric circulator from the Holly-Castle Co. works to perfection.

Many florists from Chicago, Milwaukee, St. Louis, etc., paid Detroit and Mr. Clemens a visit on their way back from the Toronto Carnation show.

This time it is the women of upper New York who have been duped by a man selling them squash seeds purported to spring up into rubber plants. When arrested he gave the name of George Kromer.

The Board of Water Commissioners of Reading, Pa., have advertised for bids for planting and caring for flowers at its various reservoir grounds, to be received by February 5. \$1,725 was expended last year.

The work of excavating for a lake fifteen acres in extent at "Cranbrook," the estate of George G. Booth at Birmingham, Mich., is being carried steadily along all through the winter. A new bridge with arches of 50 feet span, dam and overflow have been built by the Kahn system of reinforced concrete. H. J. Corfield who is carrying out the work hopes to have everything completed and ready for planting by the time spring arrives. The building of a new mansion will be commenced the 1st of April. Extensive

planting will be carried out on this place in the spring.

Arthur Cowee, the gladiolus specialist of Berlin, N. Y., A. G. Babcox and the Humphrey Co. are planning an extensive exhibit of this flower at Euclid Beach, O., in August. The choicest varieties grown by Mr. Cowee will be shown and prizes will be offered for general exhibits grown from Meadow-vale bulbs. Rules governing the contest may be obtained from Arthur G. Babcox, who is to announce the exact dates of the contest later. This announcement will be made early enough to permit growers to obtain bulbs for spring planting. Features of the exhibit will be the offering of new and heretofore unintroducted varieties. Designs for lawn decoration exclusively of gladioluses also will be shown.

PERSONAL.

F. Tillman of Rhinebeck, N. Y., was in Detroit for several days.

B. Suzuki, who has been in Japan for several months, will not return this year, but in his stead Mr. Tokuda, one of the directors of the Yokohama Nursery Co., arrived Saturday, January 26.

W. H. Wyman of the Bay State Nurseries, North Abington, Mass., sailed for Europe on January 23 for the purpose of superintending the shipping and packing of specimen evergreens, rhododendrons and other stock which he is importing this season.

We are glad to announce the safe return of Robert Cameron from his trip to Jamaica and Cuba. Mr. Cameron arrived in Boston on Saturday, January 26, with a rich botanical collection as the result of his tour. He was not in Jamaica at the time of the earthquake, having left Kingston for Cuba the Friday preceding the catastrophe.

SALVIA "ZURICH."

One of the most important all-around novelties suitable for bedding is undoubtedly the new scarlet sage "Zurich" (*Salvia splendens compacta* "Zurich"). My attention was called to this plant several times during the last year in the European floricultural press reporting the various flower-shows held through Germany and it is remarkable how unanimous all reports were in praise of this magnificent plant.

It originated with the Park Department of Zurich in Switzerland about four years ago and has since been tried by a limited number of prominent park men and florists in Germany. Salvias are much more used throughout Europe as bedding plants and all the varieties such as Clara Bedman and Ball of Fire are far better known there, but this new salvia "Zurich" is said to beat them all. It is dwarfer than Ball of Fire, which is the dwarfest we have so far, never exceeding 18 inches in height and its flowers are produced in wonderful freedom, while plants are still small, making it practically an everblooming variety and I have no doubt that it will soon find its way to our side.

A great drawback with *Salvia splendens* and its other so-called early flowering varieties has always been its late time of blooming and a new variety which will unfold its wealth of flowers simultaneously with a geranium must be welcome to all florists who have groups to plant for effect. It is also said to last much longer when in flower, blooming long after the ordinary varieties are through. One of my correspondents calls it the "Gloire de Lorraine" of salvias which he says is a fitting description, though far fetched.

SOUTHERN WILD SMILAX

We are booking orders now for future delivery for Fancy Holly and Beaven's Fadeless Sheet Moss. Write for Samples.

E. A. BEAVEN, Evergreen, Ala.

PHILADELPHIA NOTES.

J. D. Eisele, of Dreers, sailed for Europe last week on a combined business and pleasure trip.

D. T. Connor has been in Baltimore the past week looking up business for the Lord and Burnham Co.

John Westcott has been in poor health for the past three months and has gone to Florida to recuperate.

W. C. Langbridge, the seed trade expert, was in town last week. If there is anything left in the way of orders or arguments after this visit it is outside of our knowledge.

There will be a poultry show at the Fencibles Armory on North Broad street next week. Several of the seedsmen, including the Johnson Co., will make a display of specialties.

A sad accident occurred at the home of Thomas B. Meehan, of Thomas Meehan & Sons, on the 29th ult. His son Thomas fell from a third-story window while at play, and we regret to record that the accident terminated fatally. The child was nine years old.

Thanks to HORTICULTURE, Wm. C. Smith has no surplus of Boston, Scottii or Barrowsi ferns to offer for the present. His ficus and asparagus are also fully booked up. Mr. Smith has been remarkably successful in propagating this class of stock and is satisfied with a reasonable profit. Look out for his next offer, which will include Ramblers, azaleas, lilies and other Easter stock.

FIRE RECORD.

P. J. Kertsen, Devils Lake, N. D., nursery and greenhouse totally destroyed; loss \$4,000, partially insured.

W. J. Clemson's greenhouses, Taunton, Mass., January 25; a brisk blaze promptly discovered and quickly extinguished. Loss about \$200.

The house occupied by C. H. Hune and assistants on the grounds of the Memphis Floral Co., Memphis, Tenn., was totally destroyed January 19.

Thomas Hill, Arlington, Mass., lost boiler house and portion of greenhouse on January 26. With great care the fires in the boilers were not extinguished, thereby saving a large crop of violets just ready for the market.

CUT FLOWER MARKET REPORTS

BOSTON Market continues very strong on all lines. A slight increase in supplies shipped in to wholesale dealers is noted this week, but it is not sufficient to make any impression on values and everything of acceptable quality finds a ready customer waiting. Single trumpet narcissi and lily of the valley show evidences of accumulation. Violets are moving better than they did last week.

BUFFALO The thermometer registered a few degrees below zero the past week and cut the supply in stock very short. Roses were the scarce article. Very few were had and the prices were regular holiday rates. A good many orders were filled only partly and many not filled at all. Tulips and jonquils are coming in more plentiful and selling rapidly; narcissus, lily of the valley, lilies, etc., were in fine form and also sold well. Carnations of good quality and not too plentiful, and prices holding well. The price on American Beauty roses is so high that there is hardly a call; in many instances Richmond fills the bill. Sweet peas are in their glory and sell rapidly. McKinley Day was a good day for the Buffalo florists, the carnation demand being so great that every flower coming to the wholesalers was picked up at sight; a slight advance in prices prevailed Monday and Tuesday. Never in Buffalo has there been such a general wearing of carnations as on this occasion. In every street car, in all of the hotels, on street corners and in gathering places of men, generally, the favorite flower of the martyred President was worn with a tender recollection.

COLUMBUS Clear and sunny, although for us very cold, the temperature dodging around zero all the past week. Trade has greatly improved with the fine weather. McKinley Day was a busy one, indeed; more carnations were sold than ever before; in fact, with every year that passes, the people of Ohio, without regard to class, are a unit in wearing a carnation in honor of him whose memory it is an honor to honor. Prices show little change.

DETROIT Business is booming along at a lively gait with every florist on the run for goods to sell. Roses and carnations are very scarce and bring prices above the average for this time of year. Narcissi, daffodils, Roman hyacinths and tulips find ready sale at good prices.

LOUISVILLE Business conditions were somewhat improved the past week. Carnations are in very good supply, of good quality and sell well. Roses have a fair demand, and the supply and quality are about satisfactory. Violets, lilies of the valley, bulbous stock, etc., are sufficient to meet the demands.

NEW YORK A slight improvement in supply of tea roses is observed this week. Beauties are still coming slowly and the price holds according to grade and quality. Selected lots of specials have realized a dollar per flower. A large percentage of blossoms are imperfect. Carnations are more plentiful and prices have eased off. There is a considerable quantity of daffodils, lily of the valley, tulips and Paper Whites in the market and they are bringing good prices. Harrisii lilies are scarce. Violets selling well. There seems to be about enough smilax and asparagus to meet daily demands without surplus.

PHILADELPHIA Although stocks generally improved as to color and quality the past week, business could not be said to be very active. The indications, however, are for a better tone from now on, the improved tendency being already apparent. High quality Beauties were scarce and in good demand. The short grades were generally rather knotty and also poor in color. Brides and Bridesmaids have greatly improved as to color, but the cut is still below the average. The bright spot in the market at present is Richmond, which is extra good. Carnations are a little more plentiful. The demand for lily of the valley is better and the quality has improved. Tulips and single daffodils are now a strong feature, and as yet show no sign of being overdone. Sweet peas are specially fine at present, and the same may be said of cypripediums and cat-

tleyas. Double violets are scarce, singles draggy.

TWIN CITIES Stock is not first class; prices are steady, and trade fair. Twenty to twenty-five degrees below zero has prevailed much of the past week, with a little more sunshine.

Business in Montreal, P. Q., is reported as rather quiet at present.

Business is reported as very good in Toledo, O., but owing to the very bad weather, flowers are very scarce and quality is not very extra.

BUSINESS CHANGES.

The firm of Kent & Marsh of Newburyport, Mass., has dissolved and the business will hereafter be conducted by Otis Kent, Mr. Horace Marsh retiring.

Wm. Ferguson has moved from Haverhill, Mass., to Plaistow, N. H., where he will have better facilities for growing the fine gladioli with which his name is associated.

M. J. Leach of Pawtucket, R. I., gave up active participation in the business of M. J. Leach & Sons on January 1, and will carry on the market gardening business while the sons, Ed. and Herbert, will take charge of the greenhouses.

NEWS NOTES.

W. G. Kroeber, New Bedford, Mass., has filed a voluntary petition in bankruptcy. Liabilities, \$4,274, largely secured; assets, \$500.

We are sorry to report that Colin Campbell, one of the oldest florists of Montreal, Can., has failed, with liabilities amounting to \$10,000. The creditors have taken possession of the store on St. Catherine street and the greenhouses at Rockfield.

A protest by L. J. Kreshover against assessment of a 50 per cent. ad valorem duty on preserved cypas palm leaves and wreaths at the port of New York has been overruled on a review by the Board of U. S. General Appraisers. The decision is that these goods come under paragraph 425 of the present tariff act, which includes artificial or ornamental leaves, flowers, and stems of whatever material composed, not specially provided for and which are subject to 50 per cent. ad valorem duty.

California Rose Company, Pomona, Cal. Book of Field-Grown, Own-Root Roses. A comprehensive list, well illustrated.

Chicago Carnation Co., Joliet, Ill. Price list for 1907. Lists of the leading novelties in carnations; also chrysanthemums and roses.

Good & Reece Co., Champion City Greenhouses, Springfield, O. Trade list for January, February, March, 1907, contains a very full selection of roses.

C. Young & Sons Co., St. Louis, Mo. Spring Catalogue. Handsome colored embossed covers, the subjects being nasturtiums, sweet peas and gladioli. Colored insert showing roses Franz Deegan, Killarney and Etoile de France.

"Rhododendrons" is the title of a most seductive pamphlet issued by Eastern Nurseries, M. M. Dawson, Mgr., Jamaica Plain, Mass. It treats of our native broad-leaved evergreens in a manner that makes one hungry to possess them,—and that's the way to make a catalogue.

Dingee & Conard Company, West Grove, Pa. New Guide to Rose Culture for 1907. Killarney and Anny Muller form the subjects of the colored cover, and very handsome are they. There are also three colored plates of roses and one of dahlias. A very extensive list of roses, all classes.

John Lewis Childs, Floral Park, N. Y. 1907 list of flowers, vegetables and fruits. The colored cover subjects are cyclamens on the front and vegetables on the back. A colored insert shows fancy caladiums and rex begonias very effectively and true to nature. The pages are replete with illustration and description of everything rare and sensational in garden products.

Conard & Jones Company, West Grove, Pa. New Floral Guide for 1907. Rose Magnafrano is nicely reproduced

William Elliott & Sons
201 Fulton St., New York

POSITIONS WANTED for head gardeners and assistants; for further information apply to W. W. Rawson & Co., 5 Union St., Boston, Mass.

SITUATION WANTED—By Florist and Gardener where services of a first-class grower are required. Married, 2 children. Address S. I., care HORTICULTURE, 9th and Market Sts., Philadelphia, Pa.

SITUATION WANTED as gardener by Scotchman; lifetime experience, all branches, fruits, flowers and vegetables; married; abstainer; 33 years age. Address Scot, care HORTICULTURE, 11 Hamilton Place, Boston, Mass.

WANTED—Two second men on private estate. Wages \$50 to \$55. Address R. D., care of HORTICULTURE, 11 Hamilton Place, Boston.

WANTED—Intelligent young gardener with some botanical and fern knowledge. Good salary. Address with qualifications H. J., care HORTICULTURE, 11 Hamilton Place, Boston, Mass.

WANTED—A Head Gardener who is in need of a first-class handy man; good at pruning trees, edging drives, cutting with scythe and working around gentleman's place. Scotch; married, no family. Address Marshall Wishart, care W. D. R., Elberon, N. J.

WANTED AT ONCE—A sober and energetic young man with knowledge of pruning, planting, etc., to assist in general landscape work. Apply in person or by mail with reference to A. Van Leeuwen, Jr., 3 Wexford Rd., Worcester, Mass.

WILL PURCHASE a private collection of Orchids from parties desiring to dispose of same. Address A. K. Balevre, 24 Clinton Street, Newark, N. J.

on the front cover and on the back cover we find roses Chas. Wagner, White Maman Cochet and Souv de Jeanne Cabaud. This is a very comprehensive list of plants, especially strong on roses and cannas; of the cannas William Saunders, Ottawa and New York are decidedly sensational.

It is always safe to expect something unique along about New Years from W. Atlee Burpee & Co., Philadelphia. This year it is a set of twelve picture post-cards, showing scenes at Fordhook Farms. They are not only attractive but suggestive of the vastness of the Burpee enterprise. No doubt Mr. Burpee will willingly forward a set to any of HORTICULTURE'S readers on application.

“HORICUM”

TRADE MARK

San Jose Scale on a Pear.

Kills San Jose,

Send for Pamphlet on “Bugs and Blights” to B. Hammond, Fishkill-on-Hudson, N. Y.

HAMMOND’S SLUG SHOT WORKS.

“HORICUM” A Scale Killer and Fungicide

A preparation for the destruction of the “SAN JOSE SCALE”; carefully prepared and put up in packages for general use.

“HORICUM” can be obtained from many of the Seedsmen in the United States. A description of the article is aptly told in the pamphlet. It is put up in quarts and gallons to 50 gallon barrels. It is the Lime, Sulphur, and Salt combination, concentrated.

ABOUT “HORICUM”

Glenside, Pa., March 31, 1906.

Hammond’s Slug Shot Works, Fishkill-on-Hudson, N. Y.

Gentlemen: Seeing “Horicum” mentioned in Monthly Bulletin of Div. of Zoology, Penna., I would thank you to inform me where I can get a supply, say about a gallon, for trial. The San Jose Scale is very bad around this section and could no doubt push sale of the solution, especially as it is spoken of so highly in the above mentioned Bulletin.

Yours respectfully,

H. J. HINDS.

P. S. Glenside is twelve miles from Philadelphia.

PULVERIZED
SHEEP MANURE

STARVED ROSE BUSHES
NEVER BLOOM

and the successful florist wants more than the ordinary bloom and stunted stem—he wants all there is in the soil—the bush—the stem—the bloom.

Don't starve the roots.

Put away your bushes this fall with plenty of fall and spring food for the roots.

The richest root food, stem and bloom producer you can use is

Wizard Brand Pulverized Sheep Manure

It goes further than any other fertilizer, costs less, no waste—no refuse or seeds. Special prices to florists and greenhouse operators.

... OUR ... CARNATION NOVELTIES — For 1907 —

Winsor, White Enchantress and Helen M. Gould

ONE way to judge carnations is to see them on the exhibition tables. A better and more convincing way is to see them growing; therefore we cordially invite all carnation growers to visit us and judge for themselves regarding the superiority of the above-named sorts.

Our carnation houses are at **Scarborough-on-Hudson**, (not Tarrytown). Friends who desire to visit us can take the N. Y. C. & H. R. R. R. from New York. Trains leave there every half hour. Scarborough is the first station north of Tarrytown. Our grounds adjoin the station, and the greenhouses are about five minutes' walk from the station.

We are growing **25,000 plants of Winsor** for cut flowers, alone, for the new York market this season, which shows the faith we have in it. This will also enable visitors to see it growing in quantity, and besides that, will give us enough plants to get a great abundance of fine, healthy cuttings without over-propagating. We have already booked a large quantity among the large growers, and anticipate for this variety the largest sale of any new carnation that has ever been distributed, as large growers who have seen it are enthusiastic in regard to its value. Those who have seen it have immediately placed large orders for it, so we recommend those who have not ordered to place order without delay, so as to insure early delivery.

For full description of these three valuable novelties, see our wholesale price list.

Wholesale Prices Rooted Cuttings Spring, 1907

WINSOR.—Soft silvery pink. The best color, best keeper, best shipper, best seller—best every way. \$12.00 per 100; \$100.00 per 1000.

WHITE ENCHANTRESS.—Has the large size, long stem, productive habit of Enchantress, but is pure white. \$12.00 per 100; \$100.00 per 1000.

HELEN M. GOULD—A beautiful sport of Enchantress. Ground color lovely shade of silvery pink, with very fine pencilings of carmine, making an exceedingly exquisite combination. While on close observation this variety is variegated, the general effect is one beautiful tone of dark pink. Exceedingly valuable, because it combines the earliness, freedom, long stem and large size of Enchantress, giving another color possessing all the other desirable qualities of Enchantress. \$12 per 100; \$100 per 1000.

BEACON.—Orange-scarlet. A vigorous, healthy grower, of ideal habit. A profuse bloomer, with long stems. \$12.00 per 100; \$100.00 per 1000.

ARISTOCRAT.—Cerise-pink. Will be planted largely in place of Lawson. \$12.00 per 100; \$100.00 per 1000.

MELODY.—Daybreak sport of Lawson, about the same color as Enchantress, but much brighter, and does not fade like Enchantress. Also a much better keeper and shipper. Those who grow the Lawson varieties exclusively will find this very valuable and desirable, because it gives an improved Enchantress color, which is so popular, and at the same

time can be grown in the same house with the other Lawsons. An extra fine thing in every way and in great demand. A great addition to the Lawson class. \$10.00 per 100; \$75.00 per 1000.

ROSE PINK ENCHANTRESS.—A sport of Enchantress. Color, dark rose pink. \$7.00 per 100; \$60.00 per 1000.

WHITE PERFECTION.—A novelty of 1906, and a variety for which there is a great demand this season. A third larger than Lady Bountiful and a more perfect flower. \$6.00 per 100; \$50.00 per 1000.

VICTORY.—Scarlet. This is giving great satisfaction, being a free blooming, profitable scarlet. \$6.00 per 100; \$50.00 per 1000.

RED LAWSON.—A fine red. Our stock of this is superior to many stocks of Red Lawson that we have seen. \$4.00 per 100; \$30.00 per 1000.

VARIEGATED LAWSON.—The most productive of the variegated sorts. A favorite. Outblossoms Mrs. M. A. Patten. \$4.00 per 100; \$30.00 per 1000.

WHITE LAWSON.—An excellent white. \$4.00 per 100; \$30.00 per 1000.

LADY BOUNTIFUL.—Pure white. \$4.00 per 100; \$30.00 per 1000.

ENCHANTRESS.—\$3.00 per 100; \$25.00 per 1000.

MRS. M. A. PATTEN.—\$3.00 per 100; \$25.00 per 1000.

MRS. THOS. W. LAWSON.—\$3.00 per 100; \$20.00 per 1000.

Red Chief—Bright scarlet—early and very productive. \$12.00 per 100; \$100.00 per 1000. Average 3 in. flower. A leader in every respect.

Bonnie Maid—Clear pink edged white.—\$12.00 per 100; 100.00 per 1000. Large well formed bloom. Very early and productive.

F. DORNER & SONS CO.
La Fayette, Ind.

MABELLE

New Pink Carnation for 1907

Color—A peculiar shade of lovely pink, with a faint yellowish cast; several shades lighter than the Lawson. Unlike most Pinks, the brightest sun does not injure the color. **Size**—3 to 4 inches in diameter when established. **Odor**—Pleasing, but not strong. **Stems**—Invariably strong, but always graceful, ranging from 12 to 30 inches during the season. **Habit, etc.**—A very quick, active grower, making specimen plants in a short time, even from late cuttings. On account of its rapid growth, requires supporting very soon after benching. Gets away rapidly, blooms early and gives long stems right from the start. **Productiveness**—Prodigious is the best word we know of to use here. It is the most incessant bloomer early and late, we have ever grown. Stock limited. Delivery January 5th to 10th and later.

Price \$12.00 per 100, \$100.00 per 1000

THE H. WEBER & SONS CO., Oakland, Md.

and Ready Reference Guide. You
will find some good offers there also.

Dosoris

Dosoris, Glen Cove, L. I., N. Y.—the home of the late C. A. Dana, once editor and proprietor of the New York Sun—is a name connected with my earliest impressions of American horticulture. I used to read Mr. Falconer's articles in the English gardening papers and my intentions were to visit the place on the first opportunity. It may seem strange that I should have put off doing so until after a residence in the United States of nearly a quarter of a century. I had, however, heard that, since the elder Dana's death, it had "run down," and this I offer as an excuse poor though it be, for not visiting the place before. This autumn I planned a trip to New York to study horticulture in the neighborhood of the country's metropolis, and "took in Dosoris."

Interest here has been given a new lease. Mr. Paul Dana, the veteran publisher's son, has made it his summer home. Though it has been divided, and is now the home of two families, for horticultural purposes it is one.

Primarily I went to study coniferous trees and shrubs. It is plain that the small strip of water—the Sound—separating Long Island from the mainland, makes a great difference in its climate. All insular evergreens—where the test of hardiness and general well-being depends upon congenial conditions as to moisture and freedom from extremes—do well here. Conditions of soil are of secondary importance, consequently we find a number, which fail, or do poorly with us, that succeed here. All the things we can grow at Wellesley do well, and more too.

Photo by John F. Johnston

PICEA MORINDA

Dana Island—Height 40 feet.

The place has an additional interest to me, because the late H. H. Hunnewell, the elder Dana, and Prof. Sargent were very great friends, and in days gone by—20 or 30 years ago—whenever any new thing in the coniferous line was introduced, each gentleman's place was sure to get some specimens for trial, with the result that we have duplicated here many of our Wellesley trees and shrubs. Parsons' nursery was in full swing at that time. Mr. Trumpey was in charge. He and Jackson Dawson are in a class by themselves. I fear we shall never meet their like again. As craftsmen, each is peerless in his time. The result of Trumpey's work was sure to find a home at these places. From Parsons came the Japanese yew *Taxus cuspidata*, and its variety, *brevifolia*, now becomes famous twenty-five years after introduction. It is one of the mysteries of the age that these grand hardy yews are so little known. They were probably sent by Hogg to Parsons, and the first plants introduced were grafted upon *T. baccata*. We have many large plants of both the type and its variety, but ours are exceeded in size by those at Dosoris. For what reason, we cannot tell, but the plants at Dosoris, of the type, carry a leader, and assume an oval, tree-like form. None of ours have done this. All are spreading and flat-topped. The dwarf form produces seeds freely, and from this source we shall some day have a large supply and some variation in form. Seedlings are already coming up in the neighborhood of the larger plants, and very interesting

Photo by John F. Johnston

ABIES PINSAPO

Dana Island—Height 25 feet.

they are. There is an unnamed variety of *baccata*, a very handsome plant, and very hardy, probably the same as one at Wellesley. Also, *T. baccata stricta*, probably the most distinct and hardiest of all the *baccata* forms, excepting, perhaps, the golden-leaved. Also *T. baccata Dorastoni*, a very handsome drooping variety, and *T. repanda*, of similar habit. *Dosoris*, I should say, is about the northern limit of the English yew *T. baccata*; they will live at Wellesley, and some thrive fairly well, but are occasionally winter-killed.

Wellingtonia gigantea is entirely out of consideration at Wellesley. Even here it lives in a dubious way. I was surprised, however, to learn that it does well with Ellwanger & Barry at Rochester, New York. *Cryptomeria japonica* makes a beautiful columnar specimen; *C. j.* var. *Lobbi*, neatly pyramidal. The last named is said to be hardier. Of *Pinus excelsa*, there are several large specimens; some also of *Pinus ayacahuite*. That the last named is true, is doubted by one very good authority. Nevertheless, it is different from the typical *P. excelsa*. *Pinus Lambertiana* also, one of our doubtful ones which has existed precariously at Wellesley for 30 years, is at *Dosoris* a fine tree. There is a very handsome specimen of *Picea Smithiana* (*morinda*)—probably the finest on this continent, and the most beautiful of all—with long needles, and drooping branches. At Wellesley it lives—that is all. *Abies Pinsapo* makes a handsome specimen.

Cedrus atlanticus was a pleasant surprise to us. We had seen very fine trees in England last summer. It has been tried at Wellesley, but will not live. There are trees at *Dosoris* 50 feet high. The Atlas cedar is a distinctly beautiful evergreen, in green and blue varieties, of open and somewhat irregular habit varying the monotony of pyramidal evergreen like firs and spruces.

Other evergreens—hardy with us—are *Abies Veitchii*, *A. brachyphylla*, *A. concolor*, *A. cilicica*, *A. pectinata*, *A. sachalinense*, *Picea polita*, *P. orientalis*, *Pinus flexilis*, *Pinus pungens*, and some commoner types.

Boxes (*Buxus*) do exceedingly well. We had several large specimens at Wellesley, until a few years ago. Two severe winters finished all but a few in sheltered places. The summer house is completely covered with *Wistaria sinensis*. Nothing could be more successful for arbor work. It has done its work well—too well—threatening, in the near future, to pull the house down. *Schizophragma hydrangeoides* has climbed to the top of a tree. It is less common than the climbing hydrangea—*Hydrangea petiolaris*. *Corylopsis pauciflora* and *C. spicata* are two very pretty early-flowering shrubs. *Halesia tetraptera* and *H. diptera* are both large and beautiful specimens; they are especially valuable on account of the varying times of blooming—one follows the other nicely. *Magnolias* are well represented: *M. hypoleuca*—white flowers and scarlet filaments, very beautiful; *M. Watsoni*, another beautiful species, with sweet scented flowers; *M. macrophylla*, large both in leaf and flower; *M. Halleana*, a shrubby kind with starry white flowers in early spring; the beautiful native, *M. glauca*; *M. Kobus*, and some other commoner kinds.

The able and efficient superintendent, Mr. Johnston, has made some very fine pictures of the magnolias at *Dosoris* which it is hoped will be published, together with cultural notes in the near future.

J. D. Hatfield

The Pear Blight

The days of the Bartlett pear seem numbered. California, the State to hold out the longest in the successful and profitable culture of this delicious fruit, is fast losing ground before the ravages of the dreaded pear blight.

A number of the middle California valleys famous for their pears are completely wiped out. The effort to save the trees that are left is being concentrated in the northern counties, where the disease has not gone the limit. Even here the conditions are bad. The past year was a very favorable one for the blight. Late heavy, frequent rains caused the blossoming to extend over a long period and induced a soft green, watery growth with the production of many suckers, just the thing for blight infection.

Failure to frequently remove the suckers gave the blight a chance to get into the trunks and roots of the trees and there are a number of orchards badly off in this respect. As surgery is the only method of getting rid of the blight, the cutting away of a large portion of the root and the cleaning of the trunk entails an enormous amount of work and the expenditure of considerable money. So profitable has the crop been, however, that many orchardists are doing just this thing in order to prolong the life of their orchards if they cannot eventually save them. If badly gone the tree must be grubbed up; otherwise there is a fighting chance.

The United States government has seven men in the field and the California Agricultural Experiment Station has five or six out, all of whom are working on this proposition giving all their time to the farmers, showing them how to recognize the blight and training them in the proper methods of eradication. It means an immense amount of work and the final outcome is an open question. The Californian is not used to insect and fungus ravages—although he thinks he is—and he loses heart very easily.

To check and hold one's own against the blight requires very careful, conscientious work and fully as important, co-operation on the part of all the growers. This is hard to obtain for laziness, ignorance and carelessness must be fought against here as elsewhere. The worst danger spots are the little backyard orchards, all of which it is impossible to find. These are bad centers from which reinfection will start. Unless everyone takes hold the Bartlett is doomed and that is why I write "the days of the Bartlett pear seem numbered." General co-operation is difficult and practically impossible to obtain.

A ray of hope filters through in the belief that the vitality of the bacillus is lessening—certain observations in the Vaca, Napa and Suisun valleys leading to this conclusion. If it is true that the blight is dying out it is the man that can tide over his orchard until the crisis is passed who will win out. He will find a market and a good one.

R. S. Adams.

More About the Proposed Boiler Inspection Law

• Wishing to get more complete information on the subject on which I wrote last week I addressed a letter to Mr. C. E. Roberts of the Hartford Steam Boiler Insurance Co., asking whether, if the proposed law should go into effect, it would be permissible for market gardeners, farmers or florists to install "lap seam" steam boilers or to retain such where same are already in use; also whether we should be obliged to employ night firemen or whether this could be avoided by taking out an insurance policy; whether the use of a boiler to generate steam for pumping water, the valves to the houses being closed, or the use of a spare heating boiler for this purpose would constitute same power boilers, etc. I received the following reply:

Mr. R. T. McGorum, Natick, Mass.

Dear Sir:—Your valued favor of January 30th received. I wish that I were able to reply directly to your inquiry. There are at least four, if not more, amendments to the State law regarding the inspection of boilers. Which of those will pass, of course, we are unable to say. When the laws have been passed they will have to be examined and interpreted, but, in general, will say that we do not anticipate a change that would seriously affect boilers such as you use. We should expect, however, even if greenhouse boilers were exempted, if they were used for pumping they would come under the head of power boilers; and, in that case, you would require a licensed fireman, perhaps under a special license, under a regular full-licensed engineer. In these matters, however, we could not anticipate what position the State officials would take or what their interpretation of the law would be. We would say, however, that we do not look forward to anything that would seriously hamper or change matters, so far as your boilers are concerned, but as yet we are as much in the dark as to the outcome as you are. We trust that the steam users will be well protected under the law, whether for heating or power purposes, by the passage of a conservative measure.

Yours respectfully,

C. E. ROBERTS, Manager.

It seems strange that in the bill under consideration it is proposed to take us out of the exempted class, but admit to that class boilers under the periodically guaranteed inspection of companies which have complied, with the laws of the commonwealth, and, further, to substitute a minimum of "three-horse power" for "eight-horse power." Does the State feel obliged to make laws to keep up the business of the insurance companies? If not, then why these changes?

We are told in the above letter that if we run a pump we must have a fireman with a special license, under a regular full-licensed engineer; that's rich, isn't it! Most of us have started from a small beginning and some of us are in the small class yet. I look after my boilers myself, except at night, as I always have done and, when we get weather, run a little pump for manure water, and many florists do the same. We can take a pump to pieces and put it together again if occasion requires, but, could we get an engineer's license of the class mentioned? I think the florists that could do it could be easily counted. For the privilege of using a

pump once a week are we to employ two extra men, for perhaps two hours' work weekly?

Pressure for greenhouse heating rarely exceeds 10 lbs., the safety valve set to blow off at perhaps 2 pounds higher. Is there any danger of explosion? Florists are usually situated in isolated places, where the risk, even under high pressure, would be very small. "Motor road vehicles" are left on the exempted list. In these steam cars a pressure from 200 to 400 pounds of steam is carried and a pump running all the time. These are allowed anywhere on the streets amongst crowds of people. I wonder why they were left on the exempted list and we taken.

It will be noted from the above letter that there are four or more inspection bills in the process of hatching. We are having a hard enough time this winter trying to get flowers under bad weather conditions without being saddled with extra burdens to be added to our already increased expenses, and decreased incomes!

Gillenia trifoliata, Moench

This plant belongs to the natural order Rosaceae in which several families since ages ago have been cultivated. Genera and species within this order are still in use in our parks and in our gardens, not alone for their economical value but also for their embellishment. It is to one of those I wish to call the readers' attention, our native *Gillenia* (India Physic or Bowman's Root). If it was as well known by garden cultivators as it has been given names by botanists we would see it more commonly cultivated. Known as *Spiraea trifoliata*, L., it was first cultivated in England in 1758 by Mr. Miller. *Ulmaria major trifolia*, *Ulmaria virginiana trifolia*, and *Porteranthus trifoliatus* are also names with which it has been honored. It well deserves with right the honor to be more widely cultivated. With its pinkish-white flowers in a loose paniced corymb and its fine incised foliage, it will fill its place in the border with gracefulness and elegance, and as a cutflower, few of the hardy perennials will excel it. The writer of these lines saw in Horticultural Hall, Boston, last summer a vase of this plant, and it was the most pleasing and attractive in that of genera well represented, staged collection. Its culture is not difficult and grown to perfection "it certainly is a most delectable plant," as was the opinion of an early writer. It thrives best in a moist peaty soil and half-shaded situation. Propagation in spring by parting the roots or by seeds sown as soon as ripe.

The Jamestown Exposition
 Our news columns convey the gratifying information that the promise of greater horticultural efficiency in the laying out and adornment of the Jamestown Exposition grounds than was the case at any one of the previous fairs, is being fulfilled. The men

selected for this work and the early beginning which was made gave good assurance at the outset that former mistakes in this direction were not to be repeated and that good judgment and excellent taste might be looked for in the management of the horticultural department and the general landscape work.

A suggestion to the Carnation Society

It is a question whether the American Carnation Society might not with wisdom extend the time of their annual convention to three days instead of limiting it to two as has been the custom. The first day could then be given over entirely to the exhibition feature, thus giving the exhibitors time to stage their flowers properly; and visitors abundant time to inspect and confer. The opening session could be held on the morning of the second day and the secretary relieved of the necessity of trying to do half a dozen important things all at once. The flowers, keeping as well as they have in the two last exhibitions, would hold in presentable shape until the third day. There are many excellent reasons for the extension and we can think of none against it. We hope the matter will be given consideration by the executive officers of the society at the proper time.

Some results of the flower scarcity

The scarcity of flowers of the varieties most largely in demand during the mid-winter season, which has prevailed ever since December, has produced some results worth noting. Prices have held steadily high—on first thought, a not unhealthy symptom, but it has been demonstrated to the satisfaction of many observant dealers that purchasing has been materially curtailed in consequence. Bulbous stock such as tulips, daffodils and freesias has found appreciative buyers this season to a much greater extent than would have been the case had good roses and carnations been available at the prices of previous years. Growers of flowering plants have also enjoyed a demand beyond what was anticipated and this is attributed to the stringency above noted. One branch of the industry which has, for similar reasons, attained much prominence, has been the forcing of spring-flowering shrubs and this is one of the most gratifying features of the situation, stimulating, as it does, greater public appreciation for this material with its almost unlimited possibilities in artistic decorative effect. Regardless of what may have brought it about it will be generally agreed that this is progress in a promising direction, for any addition to the standard variety of flowers for general use should at all times be welcome.

Legislation against seed adulteration

Bill 25,031, introduced in the House of Representatives on January 28, by Mr. Hepburn of Iowa, prohibits the shipment or receipt, interstate or foreign, of all seed containing dead seed or other material reducing its value for seeding purposes. It pro-

vides that all packages of seed shall be branded with the names and proportions of everything contained therein, also the name of the state or country in which it was raised and prescribes a severe penalty for false labelling. An attempt is made to define the distinction between "mixed" and "adulterated" seeds and seed dealers found with adulterated stocks in their possession are protected against punishment if they can show a warranty as to the purity of the seed, signed by the wholesaler from whom same was purchased. The Secretary of Agriculture is given full jurisdiction and all examinations and tests shall be under the supervision of the Bureau of Plant Industry. On request of the Secretary of Agriculture the Secretary of the Treasury shall supply samples of seeds as imported and may refuse entry to any found not up to standard. All seed condemned under the provisions of the act shall be destroyed or sold and the proceeds turned into the U. S. treasury; in other words, confiscated. The seed trade will do well to watch closely the progress of this bill. Legislation of this sort is popular at the present time and this effort is undoubtedly well-meant but, unless well scrutinized and carefully drawn, under the counsel of those thoroughly acquainted with the business which it seeks to regulate may reach far beyond its ostensible purpose and inflict injury never contemplated by its advocates. Fairness demands that its purpose be explicit and its provisions plainly adapted thereto—something which, as it appears to us on a first perusal, is not apparent in the bill in its present form. It has often been asserted that the farmers and others are influenced by cheapness rather than quality in purchasing and are unwilling to pay the price for first-grade agricultural seeds. We doubt very much if this is true. It should be remembered that the greater part of the grass and clover seeds reaches the consumer, not through the medium of the seedsman but of the country grocer who does not understand the seed business and cannot realize to the extent that the intelligent farmer can, the importance of having clean seed even at a little higher figure than the price of an impure mixture. As to the farmer who is deficient in this respect his perceptions might be effectually brightened up by the addition of a clause providing for seed inspection in the field as well as in the bins as pertinently suggested by Mr. O'Mara at the Senate committee hearing on the free seed appropriation last year.

Let Horticulture Work for You

If you have anything to sell to florists, gardeners, park superintendents, seedsmen, let this paper sell it for you. It reaches thousands of good buyers once a week and the cost is only a trifle. Tell your story in HORTICULTURE's advertising columns, for it will get into good company and the best people in the profession will surely see it and read it.

A Plea for Fences

Mr. Editor:—This is rather a bold heading after the two able letters from Mr. Cameron and Mr. Finlayson which have recently appeared in your increasingly valuable periodical. I by no means wish to detract from the gardener's responsibilities and duties connected therewith; of course, these to the head gardener extend over the whole horticultural establishment, and if he sees any improvement which can be effected to the landscape which the landscape gardener has overlooked, he will do well to point it out to his employer and with his approval make the change. A clever plantsman, florist or pomologist is not a full-fledged gardener, it is true, but their articles if they can show practice to bear out their theories, are always useful and acceptable reading. There are two sides to every question but each is capable of certain modifications.

I quite agree with both your correspondents that fences are lurking places for insect embryos and fungus spores, but I do not see that this is of all the consequence that is attributed to it, provided the fences are of the right sorts and are kept clipped neatly twice a year and the borders they occupy perfectly free from weeds. To the total exclusion of fences under all circumstances I take objection. As to uniformity I must admit that in city suburbs it is pleasing, but I have not quite gotten over the idea that every man's house is his castle; not that it is any longer necessary to defend it with moat and fortress, but a boundary line of some well-grown and well-kept fence of a dwarf growing shrub which will stand the winter's cold gives an idea of individual ownership and makes a man feel his independence, and says tacitly to a disagreeable neighbor (and we cannot all be agreeable yet) "So far shalt thou come and no farther." For an outside fence nothing can beat the Japanese privet. If kept bushy by semi-annual clipping and grown about four feet high and two and a half feet through, it will be a good defence against any stray cattle and impervious to smaller animals; besides which it makes the estate look as if some one owned it as well as the town.

Uniformity is good in the immediate suburbs of cities, but when we get away into the hamlet and village, diversity of buildings, gardens, and fences, always supposing all are well taken care of, constitute their chief charm.

Let us not repudiate the use of fences by wholesale, and in our efforts to do away with objectionable ones strip our lawns and gardens of every semblance of fence until our villas and cottages are dotted about a common, with here and there a shrub or flower bed to rescue the monotony of the scene. I suppose our go-ahead friends in the profession will think me antiquated but if they made a tour of the counties of Old England where the sweetbrier exhales its fragrance to the breeze, the hawthorn and holly shine with their berries of scarlet and the wild honeysuckle and clematis add their beauties to the delights I may be excused for my old-fashioned ideas.

Geo. Moore

NEWS OF THE CLUBS AND SOCIETIES

FLORIST CLUB OF PHILADELPHIA.

The meeting of this club on Tuesday, 5th inst., was large and enthusiastic. Carnations were the special topic and feature. John E. Haines gave a very interesting paper on his experiences with this flower and was followed by Edward A. Stroud and others, who told of their recent experiences at the Toronto meeting. W. A. Manda made some interesting remarks and our western friend, J. A. Valentine, added his quota to the symposium. Among the exhibits were Enchantress, Beacon and a fine white from Strafford Flower Farms; five vases of seedlings from Winona Carnation Gardens, among which appeared a fragrant Enchantress and a fringed ditto, the latter showing evidence of being a very good keeper; a pink seedling from W. A. Manda, a light pink and a Lawson pink from John Kuhn, the former being a very pleasing color and likely to be heard from; a vase of pink and variegated Imperial from John E. Haines showing their grand stems and large flowers in perfection; also a vase of very good Victory from the same; a variegated seedling from Harry P. Potter, and last but not least a splendid vase of Mabelle from H. Weber & Son, Oakland, the latter showing up grandly, proving easily the feature of the evening. Routine matters were dispatched in a very satisfactory manner, most of the committees reporting good work achieved as well under way. About fifteen new members were proposed, only one of which belonged to the associate class. If Mr. Pennock's tenure in the presidency keeps the pace like his first quarter it will be Philadelphia's banner year. Sam Batchelor exhibited a vase of lovely light pink Bougainvillea and a grand vase of Enchantress.

TARRYTOWN HORTICULTURAL SOCIETY.

The regular meeting of the society was held on January 29, president Howard Nichols in the chair. A lot of fine cyclamens were on exhibition. Joseph Bradley, gardener for Mr. Sidenburgh, of Hastings, won the prize with three excellent yearling plants. Two of the essays on vegetables by Geo. Standen and C. Newton, that were in competition for the Peter Henderson prize at the fall show were read, and a lively discussion followed.

Resolutions of sympathy and regret were read and adopted on the death of Mr. John Egan, one of the charter members of the society. Mr. Egan was one of the pioneers, and one of the most able gardeners in this section. For many years he had charge of the Gurney estate at Irvington, but latterly conducted a florist business in Tarrytown. He was one of the best grape growers in his day and his name was well associated with the production of many things first-class in floriculture.

Also, resolutions of condolence to Claude Wilson, Dobb's Ferry, on the death of his son, were adopted.

Howard Nichols offers a prize for the best twelve roses other than American Beauty for the February meeting.

NEW JERSEY FLORICULTURAL SOCIETY.

The regular monthly meeting and annual smoker of the New Jersey Floricultural Society was held on February 1. The evening was a social one for the members and their friends, and was interspersed with music and short addresses by Robert Barry, J. Austin Shaw, Neil Campbell, and William F. Ross. Carnation Winsor was shown by F. R. Pierson Co., and was received with special favor. Its color under the electric light is particularly pleasing from a decorative standpoint and its form and substance improve as the season advances, this being its third appearance before the society. Three vases of choice orchids were shown by Julius Roehrs Co., and seedling carnations by Henry Hornacker, a grower of East Orange. From the neighboring estates came the almost perfectly grown Euphorbia Jacquinæflora of Peter Duff; a specimen Cattleya Schroderae from Sydney & Austin Colgate, grown by William Reid, and hyacinths in good form and color from Charles Hathaway, grown by Max Schneider; their extraordinary size was laid by the grower to his treatment of planting as soon as received in August and burying; bringing them out gradually from cellar to forcing heat, which last was accomplished in about six weeks in a moderately cool house.

JOS. B. DAVIS.

SOCIETY OF SOUTHERN FLORISTS.

The program for the meeting of this society to be held at New Orleans, on February 14, 15, 16, is as follows:

Address of welcome by Mayor Behrman; reply by Prof. Stubbs; papers on "Chrysanthemums Growing in the South," F. P. Davis, Mobile, Ala.; "Profitable Orchids for the Florist," J. A. Newsham; "Packing, Shipping and Express Rates," C. W. Eichling; "Rose Growing Under Glass," R. Lockerbie; "What the South Can Grow for Northern Markets," W. R. Wichers, Gretna, La.; "Injurious Insects and Remedies," Prof. Newell; "Experience With Carnations in Alabama," W. T. Patterson, Jr., of Montgomery; "Elementary Horticulture in the Public Schools," E. Baker; "The Needs of the Retail Trade in the South," C. Eble. A banquet to the visiting florists will be the closing feature.

DUTCHESS COUNTY HORTICULTURAL SOCIETY.

The annual meeting of this society was held at Poughkeepsie, N. Y., on January 30, the following officers being elected for the ensuing year: President, C. J. Reynolds; vice-president, Jas. Blair; treasurer, Geo. W. Sweet; secretary, N. Harold Cottam. Wm. Saliford gave an interesting talk on his visit to the A. C. S. convention at Toronto. It was decided to hold a carnation meeting February 24.

N. HAROLD COTTAM, Sec'y.

NASSAU COUNTY HORTICULTURAL SOCIETY.

Officers were elected at the annual meeting at Glen Cove, N. Y., in January as follows: President, Alexander Mackenzie; vice-president, H. F. Meyer; secretary, J. F. Johnston; corresponding secretary, J. W. Everett; treasurer, R. J. Brown.

LENOX HORTICULTURAL SOCIETY.

The regular meeting of the Lenox Horticultural Society was held Saturday, Feb. 2, President F. Heeremans in the chair. George H. Instone was elected secretary to succeed George Foulsham, who has gone to Savannah, Ga., to become superintendent of Mr. Shotter's estate. New carnations were exhibited by the F. R. Pierson Co. Among them were White Enchantress, Winsor, Melody and Miss Helen Gould, all of which were very fine. A diploma was awarded to each.

The seventh annual dinner was held in the Curtis Hotel directly after the meeting. One hundred were present, and it was the best dinner the society has ever had. The souvenir menu card was done in red, the front cover having the seal of the society. After the dinner, President Frederick Heeremans read the opening address. Upon its completion he introduced A. H. Wingett, a former president, as toastmaster, whose presentation of the different speakers was characterized by aptness and appreciation of what the occasion demanded. Among the many speakers were Messrs. A. MacConachie, E. Jenkins of Lenox, John H. Starbuck of Pittsfield, A. T. Treadway of Stockbridge, Frank E. Pierson and Joseph Hollister of Pittsfield, Selectman Eustace Jacques, Editor White of Lee, ex-Selectman Richard Stanley, John K. Farquhar of Boston, Jas. T. Scott of New York, W. D. Curtis, proprietor of the hotel, and A. J. Loveless, president of the Chrysanthemum Society of America. Toasts were drunk to the society, the town of Lenox, Mr. Loveless, Toastmaster Wingett, the guests, the press, and Mr. Curtis. Excellent vocal selections were given during the evening by talented artists.

A special meeting of the society was held Jan. 30, when it was unanimously voted to hold the annual ball on Feb. 11.

JOSEPH TANSEY,
Assistant Secretary.

NORTH SHORE HORTICULTURAL SOCIETY.

This society held its regular meeting February 1st, President McGregor in the chair. The subject for discussion was "Annals," continued from the last meeting. The 1906 entertainment committee closed their duties by providing music and refreshments for the evening. Messrs. Menken, Dodge and Morrison were appointed to succeed the old committee. The schedule for 1907 has been issued and distributed. The rose show will be held June 26 and 27; the summer show August 28 and 29.

WM. TILL.

THE "GOOSE AND THE GOLDEN EGGS."

Washington, Jan. 29.—This being the birthday of William McKinley, was "Carnation Day" at the Capitol. The demand for the flower was great, and the florists put up the price. A number of legislators paid 25 cents for a single carnation and some could not get them at all.—New York Times.

WHOLESOME CHESTNUTS.

If sufficient heat cannot be maintained uninterruptedly in the house or that part intended for gardenias, it will be better to leave the gardenias in the pots yet a while, and in the event of a shift being absolutely necessary, and as it is presumed the plants are now in 3 or 3 1-2 in. pots, put them into 4 in. pots and keep them growing. If last year's gardenia plants still in benches are vigorous and in good all-round condition, but are crowded, try the experiment of taking every other one out, leaving the remaining ones for summer flowering. Of course it will be necessary to renovate the soil in the bench.

Where it is required to have American Beauty roses for summer and the plants are put in every year, it will be well to make preparations very soon in the way of getting the benches ready and good soil for the reception of the plants, and what is perhaps of as much importance as anything else is to make sure of getting good healthy stock to plant. It is poor economy to make cheapness the first consideration when ordering plants; better be on the safe side and order the best from concerns sending out no other but the best, then the chances are that when the plants come to hand you will not have to shrink from poor, sickly stock discolored with hereditary spots.

Fuchsias are again coming into favor. Put in as soon as you have a chance all the cuttings you see; keep them shifted and growing, and by early summer you will have a nice lot of ornamental as well as salable stock.

Salvias are satisfactory in most cases from seed if grown along in the proper way, but are not satisfactory if they are simply transplanted from the seed pans into flats and left there to crowd each other into weak, spindly things. After the seedlings are fit to handle it will do well enough to transplant them into flats: in fact, I prefer doing that; then when they show any sign of crowding, pot them into small pots, repotting them afterwards as they may require it, until they are in 3 1-2 or 4 in. pots, stopping them occasionally to get them bushy, but always early enough so that it will not have to be done when they should be in flower.

Vincas are of little use if they are not of some length. Keep them growing as much as you can; if they are now in as large pots as you can give them and these are filled with roots, feed them occasionally but regularly with liquid manure.

Geraniums will now be in 2 in. pots and ready in many cases for 3 in. pots. Now is the time to lay the foundation for stocky plants; good potting soil is a help to that end, and so also will be the process of pinching the tops of all that are at present of lanky growth and later on of all that show a tendency in the same direction. Keep shifting the plants about as often as possible, and each time stir the soil on the surface of the pots. Do everything possible to encourage the plants to grow robust and capable of throwing up good trusses of bloom to tempt buyers, otherwise you need not expect to compete successfully with others who are willing to do what is necessary to produce acceptable goods.

It is early enough yet to begin propagating coleus, and it is a question in my mind, although I am pretty well

decided on it, whether or not it pays the ordinary grower of plants for sale to bother with the cuttings at all, when these can be had in splendid condition and are offered at a low figure by firms having special facilities for handling them in immense quantities. This question is equally pertinent in relation to many other things besides coleus.

The sage who objects to the remark that "it is better to be too early than too late," and is satisfied that dirty sand and old sand, if I may use the term, is just as good as clean, fresh sand for propagating purposes is too late; that kind of advice might have done about the time when Old Mother O'Leary's cow made her famous kick. If a man is a little early with cuttings or seedlings there is some hope for him, but if too late God pity him; that is how I look at it.

Pansies should never be allowed to get into such condition that it will be necessary to take them up in "clumps" as is sometimes advised when disposing of them to customers. It is much the better way to have the plants in such shape that they can be lifted out of the soil in the frame singly and yet have enough soil adhere to them to insure success.

Where changes, alterations or improvements are under consideration or contemplated on private estates, it will be well for the gardener, or whoever is selected to carry out the work, to make beforehand a careful estimate of the cost and make the same known plainly to the owner of the property, taking care always to base the estimate rather higher than lower than actual conditions and future eventualities may warrant; this will most likely prevent much unpleasantness at the intervals of settlement.

No matter how a skilful gardener may contrive to beautify a country residence with plants innumerable, if from any cause the lawn gets into poor condition and in consequence the grass patchy and weedy, much of his labor has been in vain; therefore the greatest care should be taken that the lawn may look well. Animal manure is doubtless of great value for lawns, although there may be a good deal in the complaint that such manures are productive of weeds; however that may be, the fall of the year is the best time to apply that kind of manure, while for spring application wood ashes, or bone, or blood and bone, are preferable. If wood ashes are used it will be necessary to caution those engaged in spreading it to do so carefully and evenly, not to get a thick coat anywhere, otherwise burnt spots will later make their appearance on the lawn. Now is the time to cart or wheel on to the lawn any soil required to fill in where settlements are noticeable, and it is also the time when manure should be conveyed to beds and borders for digging in later.

It remained for a southern Democrat, whose voice has little weight, to rebuke Speaker Cannon for his refusal to permit the Appalachian and White Mountain forest reserve bill to come before the house of representatives. By similarly displaying a fighting spirit, New England members might be able to force the speaker to at least permit the house to judge the bill on its merits. But they still sit meekly under his thumb, and the prospect for any action during the present session is very slight.—Boston Record.

PREPARING FOR THE JAMESTOWN EXHIBITION.

I have just returned from a trip to Norfolk, Va., and the exposition grounds at Jamestown. It might be interesting to some to learn that the total appropriations for the Jamestown Exposition are larger than they were for the Buffalo Exposition; the grounds are also larger than those of Buffalo.

A new feature of the coming exposition, and one that ought to be of great advantage to the promoters, is the plan of building with a view of saving the buildings. To begin with, the land was drained and piped for modern conveniences, and at the close of the exposition cottages and buildings can be either rented or sold for a town settlement. Warren H. Manning and John Thomas Withers are at the head of the landscape work. The boundary fence designed by Mr. Manning is very beautifully planted with honeysuckle and Wichuraiana roses. The growth is such as a genial soil and moderate climate only can make—just about three times as much growth made in one year as could be made in more northern latitudes. That genial horticulturist, Mr. Charles H. Pratt, is pretty busy with the grounds, but is handicapped with all kinds of building refuse where he longs to sow grass and plant shrubs.

The soil is easy to work, being a fine, sandy loam, retentive of moisture and, once planted, results will come along quickly; yet from my view of it, Mr. Pratt has a poor chance to get things in shape before the opening, April 26. THOMAS L. BROWN.

Black Hall, Conn.

PROPAGATION OF LORRAINE BEGONIA.

Horticulture Publishing Co.:

Would you kindly tell me through your paper what treatment to give begonia Gloire de Lorraine after it has finished flowering, also when to start to propagate it, and at what temperature should the cuttings be kept, and oblige,

Yours truly,

R. D.

Editor of HORTICULTURE:

In reply to your inquiry of the 14th inst. We usually keep our Lorraine begonias after flowering in a temperature of about 50 degrees; commence propagating about May 1st, and run the propagating house 60 to 70 degrees.

Yours truly,

T. ROLAND.

PERSONAL.

John H. Cox sailed from Boston on February 5 to represent the F. R. Pierson Company in "the old country." He has in carnation Winsor a trump card.

Ferdinand Tschupp, of Union Hill, N. J., is reported as dangerously ill. Mr. Tschupp is one of the pioneer florists of Hoboken, a man highly respected for his integrity and industry.

G. E. Bradshaw, of Ossining, N. Y., formerly connected with the wholesale cut flower trade in New York city, is now engaged as an inspector on the new station site of the Penna. R. R. tunnel.

GREENHOUSE CONSTRUCTION.

A Paper Read Before the American Carnation Society by R. O. King.

During the past few years many papers have been read on greenhouse construction. The general methods of construction have been very thoroughly described and most of the growers are agreed for instance, that cypress is about the best thing to use for the wood work, that iron posts are better than wood posts, that an iron gutter is better than a wood gutter, etc. All of these things are so familiar that it is hardly worth while going into further discussion about them. It will perhaps be more interesting to take up some points of greenhouse construction which are just as important, but which have not received as much attention. For instance, the use of glass up to 24 inches in width makes a lighter and less expensive house than narrow glass. The choice of locality for a greenhouse plant should depend among other things on the amount of light available. The application of the scientific principles used in the design of large buildings and bridges to greenhouse construction is something which should interest the grower as well as the designer. The application of these principles has not been necessary in the ordinary construction of small houses where the accumulated experience of many years has been a sufficient guide. When, however, it is necessary to design a house unlike anything previously constructed there is of course no experience to fall back on, so a safe design can only be worked out by the application of the scientific methods referred to.

WIDE GLASS.

Some years ago 16 inch glass was considered about the limit for greenhouse construction. More recently 18 inch glass has been used. In Canada a number of plants are built with 20 inch double diamond English glass. Twenty inch glass is probably selected because 20 inches square is a good size for butting and it does not exceed 40 united inches. In the United States where lapped glass is most generally used the size most in use is 16x24 with the bars 16 inches apart. A few of the more daring growers have risked building their houses with the bars 24 inches apart and using this same size glass. In our own experience a number of customers have put the glass in this way. In only one case do we know of any trouble having occurred. Such great advantages in economy of material and the lightness of construction are obtained by the use of this wide glass that it is worth making some study of the re-

R. O. KING

quirements that are necessary for the satisfactory use of 24 inch glass.

BREAKAGE FROM HAIL.

It seems unlikely that 24 inch glass will suffer any more damage from hail than 16 inch glass. The reason of this is that glass laid the 24 inch way has more of a chance to spring than glass laid the 16 inch way, so that in case of a sharp blow such as from a hailstone, 24 inch glass, although really weaker, can give way more without breaking than the 16 inch glass, consequently the extra spring makes up for the extra weakness. This action of hail was well illustrated at the Lancaster plant of W. J. Palmer & Son. In July, 1905, a hail storm passed over this plant and broke considerable glass. The house with 24 inch glass which had just been built did not suffer any more in proportion than the houses with 16 inch glass. In fact, the greatest damage was done on some 10 inch glass though this was single thick. It seems that a hailstone big enough to break 24 inch glass will be big enough to break 16 inch glass so the danger from hail need not worry any one who wishes to use wide glass.

DEAD WEIGHT ON GLASS.

Glass is likely to be broken by the dead weight of large accumulations of snow and ice, for this reason it is interesting to determine just what weight glass can stand. In Canada where everyone believes we have a great deal of snow, a number of growers are using 20 inch English double diamond. Now English double diamond is about as heavy as American single thick. A box of 50 feet of American single thick glass is supposed to weigh 70 pounds while a box of 100 feet of English double diamond is supposed to weigh

140 pounds. It follows from this that our Canadian friends are using 20 inch single thick glass in localities where much more snow may be expected than in localities in the United States. In addition to this, more of the greenhouse plants in Canada are built on the ridge-and-furrow system so that they get the full benefit of the weight of a sudden snow storm. We have made some tests on the weight of American double thick glass taken the long way and the accompanying table shows the results obtained.

TABLE I.

Test of Breaking Strength of 16x24, American, Double Thick, A Glass.

Support, 24 Inches Apart.
Sand Used for Loading.

Weight of Light.	Load Required to Break Light.	Breaking Load per Sq. Foot
4 lbs. 5 ozs.	107 lbs.	40.2 lbs.
4 lbs. 4 ozs.	40 lbs.	15.1 lbs.
3 lbs. 12 ozs.	57 lbs.	21.5 lbs.
4 lbs. 7 ozs.	61 lbs.	23.0 lbs.
4 lbs. 12 ozs.	110 lbs.	41.3 lbs.
4 lbs. 4 ozs.	95 lbs.	31.9 lbs.

The peculiar point about these results is that the strength does not depend at all on the thickness. You will notice that one light of almost the same thickness as the light which took 110 lbs. to break broke at only 40 pounds. Another peculiar feature you will notice is that although the glass is supposed to be double thick and each light should therefore weigh four pounds 11 1-2 oz. in order to make 90 pounds to a box of 19 lights, there is not one light up to weight. You will probably find that this is the general case and although you pay for double thick glass you really get what ought to be called single thick. The glass taken for our test was selected at random and the weights found therein are confirmed by some weights taken a short time ago in Philadelphia. Selecting two boxes at random each light was weighed carefully and in one box 14 lights out of the 19 weighed less than four pounds each. In the other 13 lights out of 19 weighed less than four pounds each and some of them were very much less than four pounds each. Leaving out of consideration two or three extra heavy lights in each box the remainder of the glass was practically single thick. This probably explains why Canadian growers find English double diamond really as strong as American double thick. In order to cover this point the weight of six boxes from two different factories is given herewith.

TABLE II.

Weight of Glass, 16x24, A Quality, Double Thick.

Eldred, Pa., Glass.		Brookville, Pa., Glass.	
Gross wt. of box.	Net wt. of glass.	Gross wt. of box.	Net wt. of glass.
87 lbs.	77½ lbs.	76 lbs.	66½ lbs.
85½ lbs.	76 lbs.	85½ lbs.	79 lbs.
86¼ lbs.	77¼ lbs.	85¼ lbs.	76¼ lbs.
94 lbs.	84½ lbs.	79½ lbs.	70 lbs.
87½ lbs.	78 lbs.	85½ lbs.	76 lbs.
100½ lbs.	91 lbs.	79¼ lbs.	69¼ lbs.
Average wt 80.8 lbs.		Average wt. 76.8 lbs.	

The glass is all labeled A. double thick and is as fine looking glass as

one usually sees. The average weight of one lot is 76.8 pounds per box and the other is 80.8 pounds per box, making both lots very much under requirements of double thick glass.

Referring again to the test of the strength of glass, the peculiar fact the strength does not depend on the thickness is probably explained by difference in annealing. If the glass for a greenhouse is to be selected from the point of view of strength, then no other qualification is more important, and we should have some guarantee from the makers that the glass has been properly annealed. The purchase of properly annealed glass has not been given sufficient attention, and it is very likely that a great deal of the annual breakage of glass in greenhouses is due to defective annealing. Certainly if you put some lights in your house which will only stand 40 pounds, and others which will stand over 100 pounds, you must expect the weak ones to go first. As glass is now manufactured it is perhaps impossible to devote special attention to greenhouse requirements. The glass people say that the workmen do not like to make more money on larger sizes. The greenhouse trade, however, is increasing rapidly and improvements are being made in the manufacture of glass so that perhaps some time we will be fortunate enough to have a factory making glass especially adapted for greenhouse work.

SUNSHINE AVAILABLE IN DIFFERENT LOCALITIES.

In locating a greenhouse plant the only thing not usually considered is the amount of sunlight that is to be expected. Yet there is nothing more important and a guarantee of good measure of sunlight would be a very

valuable asset for a greenhouse plant. Localities only one or two hundred miles apart are found to have very different amounts of sunshine during the winter months. For instance, before locating the United States Cut Flower Company's plant at Elmira it was found that the sunshine to be expected in that locality is about double what would be expected in Buffalo. In order to illustrate the great difference in sunshine for different localities, a table has been prepared, covering the winter months for the past three years. It is only possible to give observation for points widely separated owing to the extent of the territory covered, but it should be kept in mind that the difference shown by the table as occurring between points widely separated may also occur between what might be called local points, as in the case of Buffalo and Elmira as already referred to.

Though it is perhaps unnecessary, or rather unwise, to start a discussion as to the relative merits of houses built detached or built on the ridge-and-furrow system, still the consideration of this sunshine table leads to the observation, that as lack of sunshine is the condition that confronts most of us, it is just as well to build houses to suit that condition. To meet that condition, you must try to cover as much ground surface as possible with as little structural material as you can get along with. Now the way to cover ground with a small quantity of material is to use the ridge-and-furrow system, making the pitch of the roof as low as possible and using as wide glass as you will risk. Remembering that we are meeting the condition of no sunshine, it also follows that it does not matter whether the houses run north and south or east and west.

Finally, provided your houses are built to meet the worst conditions, that is no sunshine, will they not then take care of themselves under better conditions, that is with sunshine?

DESIGN OF GREENHOUSES FROM CONSIDERATION OF STRENGTH OF MATERIALS.

It may be interesting to describe the process of designing a new type of greenhouse for which practically no data is furnished by previous actual building experience. A design for an even-span house, 150 feet wide and having only five rows of supporting posts, has recently been completed. This house is a great departure from present standards and will set a record for wide houses which is not likely to be surpassed for some time, or at least until we can profit from the success or failure of the gentlemen who are willing to experiment on such a grand scale. Beginning with the glass, it is desired to lay it with the supporting bars 24 inches apart. Referring to table 1 it is found that the average weight required to break the glass is 30 pounds per square foot. This is equivalent to about one foot of wet snow. The glass is hardly likely to be called upon to stand more than this, so the question of strength required against dead weight can be considered settled. The frame work of the house must now be made strong enough to carry somewhat more weight than the glass could stand, so that the glass would break before the framework collapsed. Considering the length of rafter, it is seen to divide conveniently into three lengths of 28 feet each on each side of the ridge. As it is desired to use as few posts as possible, suppose it is decided to put in a post at every 28 feet section and carry the intervening space

FIG. IV.

This roof covers 28 benches each 4 ft. in width.

by truss work of the form shown in figure IV. The load that each truss is to carry in order to be strong enough to support the glass under its breaking load is found by taking the area of roof supported by this truss and multiplying this by the weight per

TRUSS SECTION OF 150 FT. HOUSE

FIG. V.

square foot that the glass will bear, that is 30 pounds. Now this is the breaking load of the glass that the truss would be called on to bear, but it would be safe to take the working load as one-fourth of this, or 7 1-2 pounds per foot. This even would be a high working weight, as ordinarily the truss has only to carry the weight of the glass, which is less than two pounds per foot. Adding 2 1-2 pounds per square foot to cover the weight of the glass and bars, we have ten pounds per square foot as the total working load for the truss. Supposing the posts are spaced 8 feet 4 inches apart lengthwise of the house, then each truss has to carry a total working load of 8 ft. 4 in. x 28x10 pounds, or 2333 pounds. This loading may be considered as being distributed at the joints and the ends of the truss as shown by figure V. The stress or strains produced in the members of the truss can now be determined by means of the device known as the stress or strain diagram. The stress diagram for the truss we are considering is shown by figure VI. It will be noticed that the lines in figure VI are drawn to a scale of 333 pounds to 1 inch, and that they are all paralleled to one or other of the lines in the truss shown in figure V. Without attempting further explanation it may be stated that the length of each line in figure VI represents the number of pounds' strain or stress in the corresponding member of the truss. For instance, the line k b in figure VI is parallel to the lines between b k on figure V, that is, the upper member of the truss or the sash bar between the two lower purlins. The lines b k

diagram represents 333 pounds, the stress or strain in the sash bar is 3200 pounds. In the same way the stress in the lower truss rod is found to be 3000 pounds. After finding in this way the strain in each member of the truss, calculations must be made to obtain the correct size for each. For instance, if the sash bar is of cypress, then it must be heavy enough to stand a working end strain of the 3200 pounds. In the case under discussion it has been calculated that this bar must be 1 7-8 x 2 1-2 inches; this size giving a working end strain of 3200 pounds and a breaking strain of 12,800 pounds. The lower member, which we found must carry 3000 pounds, is in tension, so should be of iron or steel, and by a separate calculation it is found that 5-8 inch diameter is suitable for this strain. The other members of the truss are proportioned in the same way. Having now designed the truss to carry the roof, it is necessary to design the posts or columns to carry the truss. The strength of a column depends greatly on its length,

so by properly bracing a long, slender column it is practically divided by the bracing into a corresponding number of short columns. In the wide house under consideration it is found that 2-inch pipe properly braced in every direction will carry the roof. The design is now complete, leaving the glass the weakest member as it should be, for it is seen that although the breaking strength of the glass is 30 lbs. per square foot, and the breaking strength of the truss work is the same, yet the glass is not uniform in strength whereas the trusses are, and as 30 pounds is an average, it follows that half the glass would be broken by the time this load would be reached; and if half the glass is broken, half the weight has gone with it, so our framework stands to be subjected in the limit to only one-half of its breaking load. There is a good deal of theory about all of this, but many of these here now will likely be at the S. A. F. at Philadelphia in August, and there will be an opportunity to see how it has all worked out.

STRESS DIAGRAM FOR TRUSS IN FIG. V.

FIG. VI.

Seed Trade

Retail seedsmen, and particularly the catalogue trade, report business not up to last year in volume, but, then, we had practically spring weather, with but few really cold days up to almost the first of March last season, while winter has been no mock article this year. No doubt the close of the season will compare favorably with last or any previous year.

Following the scramble for onion seed and other short items last fall, amounting almost to a panic, has come a decided reaction, and holders who would not quote prices at all, are now offering seed unsolicited at prices they would have scorned two months ago. The tendency towards panic every time a shortage is reported has been criticised more than once in these columns, not with the expectation of effecting any radical change in this direction, but with the idea of calling attention to the ill effects of inflated prices early in the season to be followed by a sinking spell later, carrying prices below actual values. If the jobber can induce the retailer to buy at the high figures, to be followed by the inevitable decline, it usually makes the latter dissatisfied, and reluctant to accept the jobbers' judgment, and even suspicious of his honesty in the future. All of this is unfortunate, and is really due to misjudging the situation, rather than any premeditated intention of misleading the buyer. The fear lest they may not get the last penny an article may bring causes many to be very bullish on prices whenever a shortage is reported. While this is quite proper enough, it is the extreme that makes trouble. Cultivate moderation, 'tis a fine habit.

The House of Representatives has overruled the recommendations of its Committee on Agriculture, and restored the appropriation for the purchase and free distribution of garden seeds, and the Senate offers but a forlorn hope that this abuse will be discontinued. The seedsmen are greatly

New Orchid-Flowered Sweet Peas

These are a distinct "break" in Sweet Peas, differing from the standard sorts by the extraordinary size of their flowers, usually measuring 2 inches across, and by the standards being crinkled and wavy, while the wings are large and spreading. Another splendid feature is that a very large percentage bear four blossoms to the stem, which are long and strong. To sum up, they possess every characteristic that can be desired in Sweet Peas, and will undoubtedly supersede standard sorts of same color as soon as they become more plentiful.

Countess Spencer. A lovely clear pink, shading darker at the edges. 10c per oz., 25c per ¼ lb.
E. J. Castle. Rich carmine-rose, shaded with salmon, very striking, especially under artificial light. 17c per pkt., 5 pkts., 75c.

Frank Dolby. The largest and finest pale lavender-blue. 17c per pkt., 5 pkts., 75c.

Gladys Unwin. Charming shade of pale rose-pink; extra long stems and very valuable for cutting. 10c per oz., 25c per ¼ lb.

Helen Lewis. (Orange Countess) Brilliant orange-rose. 25c per oz.

Helen Pierce. This is the new gloxinia-flowered Sweet Pea, being marbled blue on a white ground, with the veins showing a little deeper exactly like a mottled Gloxinia. 15c per oz., 50c per ¼ lb.

John Ingman. Rich salmon-rose. 15c per oz., 50c per ¼ lb.

Mrs. Alfred Watkins. A superb pale pink similar in shade to the old Princess Beatrice. 17c per pkt., 5 pkts., 75c.

Nora Unwin. The finest white now in existence. 17c per pkt., 5 pkts., 75c.

Phyllis Unwin. A veritable giant among Sweet Peas; color a deep rose-carmine. 15c per oz., 50c per ¼ lb.

DREER'S GARDEN BOOK

Henry A. Dreer

714 Chestnut Street
PHILADELPHIA - - PA.

disappointed, and many much surprised at this turn of affairs, but when it is remembered that the case has been tried again before the same jury that convicted them a year ago, there is really nothing to wonder at. No client would ask his attorney to try his case before a jury that had once decided against him. There will be many new men in the next Congress, men who know that the representative farmers of the country are not flattered by receiving a few packets of bargain counter seeds, and while past experience does not warrant a very strong hope that the new Congress will do any different from its predecessors, yet it is a new jury in part, at least, and might possibly take a different view of this free seed matter.

An interesting feature of the forthcoming Cannery Convention is to be a model canning factory in full operation. New string beans and peas are

to be shipped from the South, and corn in the husk which has been in cold storage since last fall will be used, and a practical demonstration of the canning industry will be given each day. As the public is to be freely admitted to the machinery hall this will, no doubt, be one of the chief attractions. It is needless to say that this will be a very expensive demonstration, and the men who have conceived and will carry out the idea are worthy of generous praise.

On account of the recent severe drought, Japan lilies in the field have suffered considerably in their growth, and as a result of the strong demand of last year many seedable bulbs were shipped. On this account prices of bulbs will be at least 20 per cent. higher this year than last.

Henry Nungesser & Co., received on January 28 a shipment of 1980 bags of Bromus inermis—the largest single shipment of this grass seed ever brought to this country.

PUBLICATIONS RECEIVED.

The Potato Year Book for 1907, the official publication of the National Potato Society of England, is a very interesting volume. It is the first "Year Book" dealing exclusively with the potato-growing industry, and will undoubtedly prove a most useful handbook for every one engaged in growing or improving the humble but indispensable vegetable. Questions of crossing, culture, testing, diseases, exhibiting, etc., are dealt with by eminent authorities in original papers and portraits of a number of the writers are given. Sir John T. D. Llewelyn is president of the society, and W. H. Adsett, Hatton House, Great Queen street, London, is honorable secretary.

WE MAKE A SPECIALTY OF

French and American Greenhouse Glass

Particularly in the larger widths, which are now being more generally called for. All our glass is hand blown and annealed with the greatest care.

Haskell Ave. Floral Company, Dallas, Texas. Roses, carnations and chrysanthemums occupy the major part of this attractive catalogue which includes also a variety of greenhouse plants. An excellent reproduction in colors of Catherine Mermet rose adorns

"Everything for the Hardy Garden" which has just been issued by the Eastern Nurseries, Jamaica Plain, Mass., is a delightful little volume which no one can peruse without fairly hungering for the garden gems illustrated and described in it. We understand the descriptive matter was written by Miss Laura Dawson, who evidently inherits the fascinating diction of her father, Jackson Dawson.

A catalogue which would be in perfect keeping with the furniture of the most richly furnished drawing room is the list of roses sent out this season by M. H. Walsh, Woods Hole, Mass. The cover is a splendid reproduction in colors of rambling rose Hiawatha. Inside there are many large and beautiful half tones and a reproduction in colors of a water color painting of rose Evangeline. This catalogue is a work of art.

INCORPORATED.

The New England Consolidated Nurseries Co., Boston; garden and farm products; capital, \$10,000; Pres., F. K. Rice; treas., W. F. Porter.

NEW YORK PLANT NOTES.

Asparagus deflexus is regarded by some observant growers as a coming formidable rival for A. Sprengerii in cut sprays.

One result of the prevalent scarcity and high prices of flowers during the month of January has been an increased steady demand for blooming plants. All azaleas are quickly disposed of as soon as flowers can be opened, and hyacinths, tulips, crocuses and other bulbous material have profited in a similar manner. The leading florist stores are gay at present with forced spring flowering shrubbery. Prunuses, forsythias, pyruses, lilacs, etc., are very effective in the windows, and although quite expensive, are a welcome alternative under the conditions of scarcity existing in the flower and plant market.

NEWS NOTES.

E. H. Smith of Hazelton, Pa., has opened a branch store next to the Central Hotel.

Visitors in New York the past week included R. O. King, Toronto; J. A. Valentine, Denver, Colo.; H. L. Janzen, Berlin, Ont.

One of Adolph Fahrenwold's large greenhouses, 50x300 feet, collapsed at Roslyn, Pa., on Tuesday last, under the weight of thirteen inches of snow.

The Lockland Lumber Company announces that it has practically discontinued the greenhouse material business which it has carried on for many years.

S. S. Peckham sold at public auction on January 29 the stock and fixtures in his store at 8 South 6th street, New Bedford, Mass. He intends to continue business in the wholesale line at Fairhaven.

The Detroit Floral Co. was a great loser from the heavy windstorm one week ago. Many lights of glass and ventilators were broken and it was only with the greatest exertion that Jack Frost was kept out.

The almost unprecedented spells of cloudy weather have had a very depressing effect on the growers of Madison, N. J., and vicinity. Everybody complains. Many of the small growers, if not driven out of business, will be great sufferers.

Rudolph Riber, "the original rubber plant man," who sold bogus rubber tree seeds to Harlem housewives, was recently, in Special Sessions, sent to the penitentiary for eleven months, and sentenced to a \$500 fine, or serve one extra day for each dollar.

John A. Newby of Logansport, Ind., suffered serious loss from water which

drained into his cellars and extinguished the fires in the boilers. Sixteen stoves have been set up for heating purposes. It is said that Mr. Newby may bring suit against the city or parties responsible for damages.

The Michigan Cut-Flower Exchange has elected officers for the ensuing year as follows: Philip Breitmeyer, president; William Dilger, first vice-president; Fred. Breitmeyer, second vice-president; Robt. M. Rahaley, secretary and treasurer. The first three each hold 300 and R. M. Rahaley 100 shares. Total capitalization \$10,000—all paid in.

Mrs. Pierson, mother of F. R. Pierson of Tarrytown, 78 years of age, stumbled and fell, breaking her shoulder, on Sunday, February 3. Mr. Pierson's father died about four months ago, and his brother-in-law six weeks later. "Misfortunes never come singly" is an old saying which we are sorry to see apparently verified in this instance.

The United States Cut Flower Co., of Elmira, N. Y., at the directors' meeting on January 30, decided to increase the capacity of their plant one-half and to commence at the earliest possible moment the erection of 18 new houses, at an estimated cost of \$25,000. This will give them 150,000 feet of glass. The company began business in 1906 with capital stock of \$600,000. Wm. R. Compton is president and general manager.

FIRE RECORD.

Chas. L. Schmidt was a victim of the \$1,000,000 fire which visited Harrisburg, Pa., last week.

The boiler and entire heating plant in the greenhouse of John Baker, Grand Rapids, Mich., were destroyed by fire on January 27. Loss about \$1,500.

MOVEMENTS OF GARDENERS.

William Kiesling, lately in charge of Chas. B. Ward's place, Morris Plains, N. J., takes charge on April 1st of E. B. Thomas' estate on Mt. Vernon road, Morristown, N. J.

Charles Duncan, who has had charge of the greenhouses at Wheatleigh, the Henry H. Cook estate, Lenox, Mass., has resigned his position and will be succeeded by Jas. Kiley.

Richard Vince, head gardener to Robt. D. Foote of Morristown, N. J., has resigned his position. His employer tried to induce him to continue on, but without avail. He is succeeded by Paul Hunt, recently with Samuel Untermeyer of Yonkers, N. Y. Mr. Vince is president of the Morris Co. Gardeners' and Florists' Society, and will be greatly missed.

Carl Engberg of Fremont, Neb., died on January 27, aged 60 years.

G. W. Rogers, a well-known exporter of lily bulbs, died at Yokohama, Japan, on December 25.

William Dobson, 88 years of age and active until last month, has been the gardener at Mills College for young ladies, near San Francisco, for more than a quarter century. He contracted pneumonia which caused his death at the college last week, and here, where he grew old tending the beautiful gardens and caring for the fruit trees, his body was interred, after funeral services held in the college chapel. To many growers and florists about the bay he was an instructive companion, and a goodly number of these attended the obsequies Sunday, January 27.

Oscar Carlson, of Minneapolis, Minn., has received word of the death of his brother in Seattle from a shot wound.

SOUTHERN WILD SMILAX

We are booking orders now for future delivery for Fancy Holly and Beaven's Fadeless Sheet Moss. Write for Samples.

E. A. BEAVEN, Evergreen, Ala.

PHILADELPHIA NOTES.

S. S. Pennock has had just one half-day off on account of sickness in the last twenty years.

Ralph E. Faust of Pennock's has been laid up for the past week threatened with typhoid.

Horace Dumont has accepted a responsible post in the D. B. Martin Co. organization and will dispose of his commission business at 1305 Filbert street.

They are threatening to shut down all the glass works. Mean it, too. Money in it. This is not the summer shut-down. Spring also. Incredible? All right, wait and see.

The store of Dumont & Co. at 1305 Filbert street, Philadelphia, suffered severely from a fire on Monday night. Damage about \$500; no insurance. Origin apparently from the bottom having fallen out of the store heater.

L. K. Peacock, Atco, N. J., had his dwelling house burned last week. The same was almost a total loss and included a valuable stock of dahlia roots in the cellar. Whom the gods love they punish, and disaster follows on disaster. Enough! let's see what we can do to help a sorely tried brother.

They say the editor of HORTICULTURE handed them a Lemon in last week's frontispiece. A good wholesome lemon, ripe, juicy and corrective of all prejudices, cooling to the nerves, stimulative to the faculties, and grateful to the thinking man. The American Carnation Society always have been surprisingly clever in picking out the right man. Fred. Lemon is really a peach—and everything else necessary for a pink lemonade!

BUSINESS CHANGES.

Mrs. M. L. Stevens has bought the retail business of S. L. Harper, 912 C St., Tacoma, Wash.

J. B. Halley, a long-time florist of Lawrence, Mass., has entered the employ of J. J. McManmon of Lowell.

Frank Austin is making arrangements to open in the florist business at Way Cross, Ga. He was formerly with A. C. Oelschig in Savannah.

The Wm. Roethke Floral Co., opened their new store at 200 Michigan avenue, Saginaw, Mich., on January 26. This will be made the business headquarters of the company.

CUT FLOWER MARKET REPORTS

BOSTON Roses are still in short supply, but there is a promise of summer skies and the famine will undoubtedly soon come to an end. Carnations are in better supply, but not enough yet to change market quotations; they are not in as good order as usual, being soft and rather short-lived and many flowers are split—a condition easily accounted for by the prolonged dark weather. There is a nice assortment of tulips and other bulb stock now available, daffodils showing a tendency to overstock and consequent disposition toward lower values. Violets continue to arrive in large quantities. Business has been fairly brisk all along the line.

BUFFALO Continued cold weather and scarcity of stock still prevailed the past week. Flowers of all kinds were on a move the minute they arrived. Roses are still a scarce article and very few are to be had. Floral work has been much in evidence and has cleaned the market up pretty well daily. Tulips, narcissi, daffodils, etc., are coming in more plentiful, but seem to find a ready sale. Some very good Trumpet Major, La Reine and Double Von Sion are to be seen. Freesia is in good supply and of good quality. Lilies have also been in good demand but short in supply, prices holding well. The supply on carnations was somewhat short, although enough to go around. The light colors, especially white, were most in demand and prices holding firm. Lily of the valley and other stock sold well. Green goods in fair supply and demand better.

CINCINNATI Business seems fairly brisk but cut flowers are very scarce in this market. Carnations are blooming all right but the demand far exceeds the supply. This is due chiefly to the scarcity of roses which are off crop. The past month has been a hard one on roses and it will be several weeks before they are plentiful again. In bulbous stock daffodils and tulips are helping out some, but Roman hyacinths and narcissi move slowly. The latter will not sell as a cut flower and if used for funeral work they are wanted at job lot prices. Lily of the valley is scarce and in demand. Callas are at a standstill, while a few Harrisii lilies are coming in

but of poor quality. Prices are firm on everything and while stock is bringing all that it is worth it is not bringing what it costs to produce; consequently the condition of the market is far from being satisfactory.

COLUMBUS The business of the past week has been fine; everybody has been busy and the trouble has been to obtain good stock in sufficient quantity. Never was there a time when everything was cut so close. We are certainly having a splendid demand and at good prices. As regards prices there has been little change either at wholesale or retail.

INDIANAPOLIS Trade the past week has been unsettled, one day good and next day slow. The weather has been more favorable for flowers for the week but not long enough to noticeably affect the market. Roses, particularly American Beauties, continue very scarce. Carnations are exceptionally fine and plentiful. Considerable lilac is seen and sells well. Bulbous stock of all kinds is to be had in any quantity and finds ready sale. Abundance of fine lily of the valley is seen but it meets with slow sale. There is a good call for callas and Easter lilies but the supply is only moderate. In green goods and galax leaves there is a good supply all along the line.

LOUISVILLE Business conditions the previous week very satisfactory, and stock generally was obtainable in adequate quantities. Carnations were in good supply and found ready demand. Roses were somewhat scarce and were quickly disposed of. Violets, lily of the valley, narcissi, hyacinths, etc., sell well and can be had in abundance.

NEW YORK This market still feels the pinch of scarcity in roses and to somewhat lesser extent in carnations. Bulbous flowers are finding a better market than usual on account of the short supply and high prices of other things. The demand is brisk and no sooner is good stock received at the wholesale marts than it is absorbed. The Greek trade has been forced into the background for the time being by the, to them, prohibitive prices. Violets do not move with the alacrity which the circumstances would appear to warrant, and comparatively low figures

are accepted to clear out the surplus. In general the season thus far is not regarded by growers, commission dealers or retailers as a notable success.

PHILADELPHIA The feature of last week's market here was the scarcity of good roses—especially good whites—and, to nearly the same extent, good American Beauties. While carnations were more plentiful the demand kept fully abreast and there was no surplus. We have seldom seen finer white lilac than is coming in at present, while of the ordinary grades there is also plenty. Lily of the valley has recovered from the little slump of last week and is now moving nicely. Violets, both single and double, are in healthier condition, the growers apparently getting their stock into shape for the St. Valentine spurt. Cattleyas were down low, but have now recovered going readily again at good figures. Cypridiums keep very steady and are of extra quality. Tulips, daffodils, daisies, mignonette, myosotis and snapdragon are welcome and seasonable. Still some bouvardia around. Easter lilies plentiful and in demand.

CUT FLOWER MARKET NOTES.

The Twin Cities report 30 below zero, snowdrifts and slow trade. Agents selling nursery stock are snowed in, for country roads have drifts 10 to 15 feet deep.

Reports from Detroit are that the demand exceeds the supply by far; in particular is the shortage of roses felt very much. Carnations and bulbous material are coming in plentifully but yet not enough to supply the demand.

WILL PURCHASE a private collection of Orchids from parties desiring to dispose of same. Address A. K. Balevre, 24 Clinton Street, Newark, N. J.

SODA IN ITS RELATION TO PLANT GROWTH.

Address Before the Newport Horticultural Society.

On Tuesday, January 22, a large and representative gathering of horticulturists listened appreciatingly to an address by Professor Wheeler, director of the Agricultural Experiment Station at Kingston, on "Soda in Its Relation to Plant Growth," at a meeting of the Newport Horticultural Society. Professor Wheeler spoke without any notes, but evidently from a clear understanding gained from personal experience. The speaker said that the effect of soda on plant growth is a subject which has been considered by horticulturists for many years, and upon which there have been many and diversified opinions. The Rhode Island Station began its experiments in 1894, and at that time a certain writer in Boston filled the agricultural papers with statements that soda and soda salts were as valuable as potash in plant growth, and could be substituted for the latter, and the experiments at the station were made to learn if soda was beneficial solely because it liberated more potash from the soil, and thus gave the plant more potassium which is needed for its growth, or if it was valuable of itself.

Earlier than this agriculturists in Sweden and Germany had claimed that under certain conditions soda was capable of increasing certain crops very decidedly, in some cases even one-half, by virtue of a direct manurial action, and other authorities, on the contrary, denied that soda was capable of performing any such beneficial functions. With the leading scientists at war on the subject, the experiments at Kingston were begun to find out just what soda would do. These experiments have shown very material differences in the benefits of soda upon different plants.

For instance it was found that when as much as 300 pounds of muriate of potash were used, applications of soda ash or common salt in addition to potash have greatly increased yields in case of fodder beets. When the supply of potash was reduced, crops like turnips and radishes were greatly increased by applying the sodium compound in manure. In other crops it was found that sodium salts were of little value. It having been found that soda was beneficial in certain cases, the next experiments were directed towards finding out how the benefit was obtained, whether it made the soil as a whole moist or better, liberated more potash and other ele-

201 Fulton St., New York

ments of plant food, or whether it helped by increasing the contents of soil solution. In these experiments the station had the assistance of experts from the bureau of soils of the Department of Agriculture at Washington and the work has been carried on continuously for several years under widely varying conditions, in wet and dry seasons.

These experiments have thrown some new light upon the question of how soda is beneficial; chiefly that where potash is used the soda may not be of benefit, and again, if the potash supply is short soda may be helpful. It has been learned that some plants can be helped by the use of soda though there is a shortage of potash, while others are not, and particularly it has been learned that the use of nitrate of soda and kainit, which contains large quantities of soda, is an insurance against a shortage of potash in soil where those plants are grown which are capable of being benefited by soda.

There is much yet to be learned, but because everything is not known it is not a good reason for stopping the assistance that is needed to continue the work. Other scientific investigation has been continued for centuries before the desired results have been obtained. Successive generations have handed down the results of the labors to their posterity, and the experiments in plant life are but the beginnings of a scientific investigation, which others will continue and in the distant future find out what it is desired to know. After the address questions were asked bearing upon other peculiar and not very well understood actions of chemicals on plant life. The questions were answered at least very courteously by the speaker although it must be confessed that the questioners were left pretty nearly as much in the dark as ever; this is especially the case in regard to the sterilizing of soils in regard to which Prof. Wheeler was questioned.

KING CONSTRUCTION CO., N. TONAWANDA, N. Y. TORONTO, ONT.

CALIFORNIA NOTES.

The writer made a brief call last Sunday at the Santa Rosa residence of Luther Burbank, and learned that he had just concluded an article prepared for publication on "The Originator's Aim," in which he declares that the plant originator is an explorer into the infinite who has "no time to make money," and whose castle, the brain, must be kept clear and alert for throwing aside fossil ideas and replacing them with new scientific thoughts, followed by action.

Professor C. W. Woodworth, head of the department of entomology of the State University, is at present engaged in important experiments designed to prove how much poison in the form of a spray is necessary to kill insect pests and how much poison can be put into the spray without injuring the vegetation on which the pests feed. All classes of pests will be included as subjects of the savant's experiments, and the results are expected to be of great value to orchardists throughout the state. The expensive materials being used in the experiments were ordered from Germany.

LIST OF PATENTS.

Issued January 15, 1907.

- 841,132. Draft Rigging for Vehicles. William J. Drees, Covington, Ky.
- 841,166. Tedder Attachment to Mowing Machines. John Moore, London Township, Ontario, Canada.
- 841,171. Cultivator. Matthew H. Nicholson, Tyler, Texas, assignor to Eugene Rosenbaum, Dallas, Texas.
- 841,306. Combined Hothouse Grapery and Greenhouse. Robert Bender and Frederick W. Taylor, Philadelphia, Pa.; said Bender assignor to said Taylor.
- 841,390. Plow, Andrew Gullickson, Gatzke, Minn.
- 841,406. Dump Wagon. Carl E. Kaufman, Rosedale, Kans.
- 841,431. Weeder. Eugene Pearl, Passaic, N. J.
- 841,461. Hand Cultivator. Benjamin F. Shuart, Oberlin, Ohio.
- 841,488. Garden Implement. William C. Dodge, Lodi, Cal.
- 831,574. Flower Stand. Paul J. Sandhofer, Flora, Ill.
- 831,586. Weed and Grass Trimmer, &c., Obadiah Shidler, Alliance, Ohio.

The Supreme Question

in manufacturing costs, today, is production costs—it's not all in what a thing costs you, but what it's costing the manufacturer. If we were running our factory on a "loose end" basis, it's safe to say you would get a "rule of thumb" house, and because of our lost motion we could not afford to give you the best materials—but we don't do business that way! Our manufacturing cost is down so fine that you can't beat our quality at our price anywhere in the market—and you'll have pleasant dealing. Write us.

HITCHINGS AND CO.

GREENHOUSE DESIGNERS AND BUILDERS.

Manufacturers of Heating and Ventilating Apparatus.

1170 Broadway, NEW YORK.

FOR THE PRIVATE PLACE

What can be more effective or charming than the curvilinear house? This one has high sides to accommodate the taller palms and fern trees and joins a straight roofed, two compartment house in the rear. The interesting feature about this compact proposition is the way it fits so perfectly in the arbitrary space between the line fence and the dwelling drive. We understand the advantage of just such placing even as we know thoroughly, right greenhouse construction.

FOR SALE: Every part or any part for good greenhouses.

Greenhouse Designers and Manufacturers

1133 BROADWAY, cor. 26th Street, N. Y.

BOSTON Branch: 819 Tremont Building

THE lasting qualities of a greenhouse is another vital point—it's the point that should be figured in with first cost. Each year's cost of repairs actually makes your greenhouse cost just that much more. U-Bar greenhouses are the best green-

houses built and require less repairs, and the repairs cost less than in any other type of construction. Send for catalog. Pierson U-Bar Company, Designers and Builders U-Bar Greenhouses, Metropolitan Building, Fourth Ave. and 23rd Street, New York.

BEACON CARNATION

(ORANGE-SCARLET)

If you plant Beacon your help will have to hustle or put in extra time picking flowers.

Originated at Ellis, Mass.

*Has been tested four years
and proved to be of*

Great Commercial Value

Do you want to keep the "Blues" and grow Beacon? You can't do both.

Commencing to bloom early in the Fall, it gives a profusion of flowers for Christmas (when scarlet is in demand at remunerative prices) and CONTINUES THROUGHOUT THE WINTER MONTHS. It may not score as high on the exhibition table as some, but WILL FIGURE UPON THE RIGHT SIDE OF YOUR LEDGER in a manner highly satisfactory.

The blooms, under ordinary culture, average 2.3-4 to 3 inches in diameter, the guard petals are broad, well arranged, and of good substance, the centre loosely arranged and not too full. Color, scarlet with a dash of orange, which lightens up the flower, especially during dull, dark weather, making it very brilliant and attractive. The stem is long, stiff and wiry. Calyx long and seldom bursts (less than four per cent. last winter). It propagates easily. The plant is a vigorous, healthy grower, of ideal habit, and a most profuse bloomer. A night temperature of 50 to 52 degrees suits it admirably.

A bench of Beacon in full Bloom is a sight not easily forgotten

CARNATION WINSOR

We have not advertised Winsor until now because we have not had to. It is so good and its merits have been so generally recognized that it has practically sold itself. Our advance orders were very large, and we did not feel the necessity of advertising it until we were in a position to fill and take care of our early orders. We are now nearly caught up with our advance orders and have a fine lot of stock on the cutting bench, so that we can promise, for the present, February delivery on orders received within a short time at least.

If you have not already purchased a stock of this, you should lose no time doing so. We are going to sell more Winsor than has ever been sold of any novelty that has ever been put on the market. Its merits and value are now so well established that one is not buying a chance. We are cutting and shipping right along between one and two thousand flowers a day to the New York market, where our flowers are sold.

There is nothing on the market that approaches Winsor to-day in carnations. It is the best seller on the market, on account of its lovely color, fine stem, perfect calyx, and fine keeping and shipping qualities—in fact, in this regard it covers every necessary requisite as a market variety.

From a growing standpoint, it leaves little to be desired. It is unusually healthy, very vigorous and productive, and, we think, the most profitable carnation ever introduced. This may seem high praise for a carnation, but it is no exaggeration. Winsor gives a large percentage of high-quality flowers. It practically does not split at all. Notwithstanding the fact that we have had the darkest, duldest winter we have ever had, when the Enchantress and Lawson types are splitting badly all over the country with every one, we have not had one-half of one per cent. of split calyxes or Winsor—in fact, we seldom see a split calyx. Hundreds of visitors who have been at our Scarborough place will substantiate this statement, extravagant as it may appear.

Any one who fails to plant Winsor this year will regret it. Rose Pink Enchantress is good, and a good many other varieties are good, but if you want the winner, plant Winsor.

We not only have a good thing in Winsor, but we are delivering good stock. As a sample of the testimonials that we are receiving, see this space in last issue. We are trying to give 110 cents on the dollar, and guarantee to please everybody with the stock sent out, or we will not ask you to pay for it. We have still to receive our first complaint, and we have shipped between one and two hundred thousand cuttings to date.

STRONG ROOTED CUTTINGS, February delivery, \$12.00 per 100, \$100.00 per 1,000.

MABELLE

New Pink Carnation for 1907

Color—A peculiar shade of lovely pink, with a faint
yellowish cast; several shades lighter than the Law-on.
Unlike most Pinks, the brightest sun does not injure the
color. Size—3 to 4 inches in diameter when estab-
lished. Odor—Pleasing, but not strong. Stems—
Invariably strong, but always graceful, ranging from
12 to 30 inches during the season. Habit, etc.—A very
quick, active grower, making specimen plants in a short
time, even from late cuttings. On account of its rapid
growth, requires supporting very soon after benching.
Gets away rapidly, blooms early and gives long stems
right from the start. Productiveness—Prodigious is
the best word we know of to use here. It is the most
incessant bloomer early and late, we have ever grown.
Stock limited. Delivery January 5th to 10th and later.

Price \$12.00 per 100, \$100.00 per 1000

THE H. WEBER & SONS CO., Oakland, Md.

Cedrus Libani and Cedrus Deodara

Photo by John F. Johnston

CEDRUS DEODARA
at Dosoris, Long Island.

Photo by John F. Johnston

SEQUOIA GIGANTEA
Dana Island—Height, 45 feet.

To the Editor of HORTICULTURE:

Sir—Mr. Hans' writings in HORTICULTURE are most interesting and instructive and his latest subject, Ornamental Conifers, is especially so to me. His remarks about the hardiness of the members of the cedrus family interested me much. Like Mr. Hans I consider *C. atlantica* the hardiest of the three, only I thought it would be of interest to your readers to know to what extent *C. Libani* and *C. Deodara* has succeeded at Dosoris, Glen Cove, L. I. Here *C. Libani* is at least 20 feet in height and in a healthy condition. It grows in a light, sandy soil and in a position fairly well protected from the cold piercing northwest winds so prevalent here in winter.

C. Deodara, which is recognized to be the tenderest of all, is here even taller and more healthy looking than *C. Libani*. It must be all of 25 feet in height,

and accordingly has stood the test of a good many severe winters. This *Deodara* cedar is more favorably situated, however, than the Lebanon, but grows also in a light sandy soil. Thus the wood becomes well-matured before winter sets in and is, I think, in a great measure accountable for its doing so well. I should feel indebted to other readers for any information on the hardiness of these cedars.

Also I may remark here that a plant of *Sequoia gigantea*, the "Big tree of California," about 40 feet high, grows on this estate. It is in good vigor.

NEXT WEEK---COLORED SUPPLEMENT

Oriental Poppy "Mrs. Perry"

British Horticulture

SWEET PEA SPECIALTIES.

Chatting the other day with a member of a leading firm of seedsmen, I learned that the interest being taken in the sweet pea shows no signs of lessening. On the contrary, the demand seems greatly on the increase. This is not surprising, seeing the great advance which has been made in recent years in the form, texture, and tints of this popular annual, which is essentially a poor man's flower. There are about 36 new varieties placed on the market this year. Amongst these a prominent place should be given to the new varieties which are being sent out by the well-known firm of Messrs. Watkins & Simpson, Tavistock street, London. This house occupies a foremost place among wholesalers in the British Empire, and what they take up may be regarded as worthy attention by the trade. The members of the National Sweet Pea Society who visited the firm's trial grounds last July were able to judge of the excellent manner in which this branch of the business is conducted. Mr. Alfred Watkins is a sweet pea enthusiast, and last year was President of the National Society. The additions now being sent out are valuable acquisitions, likely to come to the fore on the show tables. Nora Unwin is a good white having the wavy form of the now far-famed Gladys Unwin; E. J. Castle, named after a journalistic friend, is of a rich carmine rose, with a salmon shading; Frank Dolby is an improved Lady Grisel Hamilton; Mrs. Alfred Watkins is a delightful shade of coral pink; A. J. Cook, a useful violet mauve.

A POPULAR ANNUAL.

Another indication of the increased interest taken in the sweet pea is the issue of an annual entirely devoted to this delightful flower. The third issue of this work has lately been published for the National Sweet Pea Society under the joint editorship of Messrs. H. J. Wright and C. H. Curtis. The society continues to make satisfactory progress. Amongst its vice-presidents are W. Atlee Burpee, Philadelphia; Lester C. Morse, and Ant. C. Zvolanek, Bound Brook, N. J. This year a new contributor is included in Mr. C. Harman Payne, who writes on "The bibliography of the sweet pea." Mr. Payne's researches have not been very productive, for there is a paucity of literature dealing solely with the sweet pea. Rev. W. T. Hutchins, of Indian Orchard, Mass., is credited with being the pioneer author of an independent treatise on sweet pea cultivation. Mr. Payne has been unable to find the date of the first edition, but the second edition was published by Messrs. W. Atlee Burpee & Co., of Philadelphia, in 1894. In the available list of works is given the bulletin 127 entitled "A Second Account of Sweet Peas," published by the Cornell University in 1897 from the pens of A. P. Wyman and M. G. Kains. The article of Mr. Payne is only one of many interesting contributions which have been brought together from all parts. Even Canada is represented. Mr. James A. Bland, Secretary of the

Horticultural Society, British Columbia, contributes a very readable article on "Sweet Peas in British Columbia."

THE AMERICAN GOOSEBERRY MILDEW.

We are now in the midst of a controversy in this country as to the above fruit pest. Professor Salmon, of Wye, has discovered some cases in England, and he is now actively engaged in a crusade to induce the Board of Agriculture to take severe measures to prevent a further importation of the disease. The Professor favors the passing of a legislative enactment, prohibiting the importation of the bushes from infected countries. At present the Board have no statutory authority of this kind. On the other hand Mr. Geo. Massee, a Kew expert, contends that Professor Salmon has taken up an alarmist attitude; he asserts that fresh legislation is unnecessary. Mr. Massee states that the disease can be easily coped with by pruning the bushes and by proper spraying. Professor Salmon backs up his attitude by publishing an extract from a letter lately received from Prof. B. T. Galloway, chief of the Bureau of Plant Industry, U. S. Dept. of Agriculture. This communication states: "Only a few varieties of European gooseberries are grown in the United States commercially, and these have never been important." Prof. Salmon winds up the controversy as follows: "I have repeatedly urged that immediate legislation is necessary to deal with the disease. It depends now to a large extent on growers; do they care to exert themselves to obtain from the Board of Agriculture the necessary protective measures?" The question has aroused keen interest amongst growers. At several meetings held at the principal fruit growing centres, resolutions have been passed in favor of additional powers being obtained by the Board of Agriculture.

A NEW APPLE.

Although the year 1906 produced no lack of novelties in the floral department it cannot be said to have brought forth any very striking new fruit introductions. It is difficult to understand why there should be this great disparity, for the raiser of a new fruit of merit can generally command a good price for the article. Of course, the prizes are few and the blanks many. One of the most successful apple raisers is Mr. Chas. Ross, of Welford Park Gardens, Newbury, Berks, who has raised about a dozen sterling varieties, one of the more recent being named after himself. His latest introduction is a culinary variety named Encore which will be found useful for late work. It recently received an award of merit from the Royal Horticultural Society. The variety was very much admired when exhibited in London a short time since, and it has certainly enhanced the raiser's reputation. Mr. Ross well deserves the name of a "grand old gardener." He is over 80 years of age, alert and vigorous. A few weeks ago he journeyed to London and staged his exhibits at the show of the National Potato Society. Despite his advanced age he takes a keen interest in horticultural matters. There must be something conducive to old age in a gardener's life, as there are many veterans to be found in their ranks. It is marvellous how their interest is maintained in gardening matters even when they have reached the "sere and yellow leaf period" and the hoe has been laid aside for younger hands.

W. H. Gidsett.

Roses Under Glass

PROPAGATION

The first essential towards successful propagation is a properly constructed bench. To devise and build a bench that will respond to all that is required of it has been the work of some of our best growers for many years; the result is a bench as different in appearance from the old style propagating bench as is the modern iron-frame greenhouse compared with the antiquated building of twenty years ago. Many growers, however, still adhere to the common rose bench, converted into a propagating bench by the addition of boards along the sides to conserve the heat. This practice is to say the least very unsatisfactory, as no matter how neatly the boards are made to fit, the intense heat contained in the interior of the bench soon warped them causing them to spread, and in addition to allowing much of the heat to escape, gives to the bench a most unsightly appearance. To overcome this difficulty the propagating bench may be built of brick or cement, materials not so susceptible to heat. Growers who have tried this style of bench speak very highly in its favor; it is more easily regulated than the old rose bench, and the good results obtained soon compensate the grower for his extra labor and expense. In building the walls or sides of the bench, spaces should be left for the ventilators. A very satisfactory bench operated on a place where the writer worked was built of cement, the bottom being of tile. The walls were about 3 ft. 6 in. in height, 4 1-2 in. in thickness at the base, tapering a little to within 7 in. from the top, at which point they were reduced abruptly to 2 in., the ledge thus formed serving as a support for one end of the tiles, the rest being supported by iron bars, fastened to the cross bars which were made of the same material. An opening was left in the center and running full length of bench, about 4 in. across, and covered with a box made of twelve-inch boards, a six-inch board being hinged on to one of the larger boards, the whole forming a most ingenious ventilator, as when the cover was raised, the greater portion of surplus heat was conveyed to a distance above the bench where the danger of scorching to the cuttings was minimized. Along the sides were placed other ventilators which let in cool air as it became necessary.

The bench, whatever material is used in its construction, should be equipped with a sufficient amount of pipe to insure a bottom heat of 70 degrees; not that this is essential to the well-being of the cuttings but as a means of safety during a protracted period of zero weather. Valves should be placed on each run of pipe, so that one or more may be used independently. To keep the pipes off the ground and prevent the displacement of the bench, due to expansion, a good method is to suspend each pipe by means of a stout wire to the cross bars that support the tiles, thus allowing the pipes to move with perfect freedom, and obviating any possibility of the derangement of the supports.

Sand for roses should be clean and sharp, not too gritty, and free from any decomposing matter. In order to make it pack nicely the sand should be moistened and pounded down firm, leaving a uniform depth of four inches.

(Selecting and rooting the cuttings will be the subject of the next article.)

Culture of the Amaryllis

The seed should be sown between the 10th and 20th of August. Where several hundred or more seeds are to be sown, shallow boxes or flats 2 ft. x 18 in. x 3 in. deep are best. The soil should be good, sandy and silky to the touch, evenly filled in, the surface levelled, and each seed put on edge; mind you one edge, in rows an inch apart, gently pressed into the soil, then levelled and given an even thorough watering. Place in temperature of no more than seventy-five degrees. Keep each box shaded with glass covered with brown paper or canvas night and day until the young plants show, which will be in a week or ten days if the seed is new and good.

The shading should be removed as soon as the majority of the plants are well above the soil; they should be placed in a light, warm place, being careful that they do not suffer from want of water. When the plants have two leaves each and the third one is developing, which they should do in seven or eight weeks, it will be time to transplant them into other like boxes (in good soil such as will grow good geraniums), 3 inches apart each way—made firm, well watered and encouraged to grow as rapidly as possible. After they have been growing for two months in these boxes (I mean growing) their leaves should begin to overlap each other, when, twice a week, they should be soaked with not too strong manure water, kept growing rapidly until first of May. Then partially withhold the water until the middle of the month, thus preparing them for their outdoor treatment which is soon to begin. For two weeks previous to planting out, place them in a frame where the sash may be taken off every sunny day and put on again every night when chilly.

Now for out-door treatment. When the ground gets warm in a sunny, well-drained spot, in a trench 5 inches deep, lay flat a 5-inch fence board; on either side of this set on edge a 5-inch fence board, thus forming a trough. Fill this trough with rich soil, such as will grow good roses or chrysanthemums; fill up the outside of the boards with the soil that is; then set the very strongest plants 6 inches apart and the weaker ones 5 inches apart, make firm and soak thoroughly with water. It will be understood that the 5-inch fence boards are used as illustrators from which deductions or elaborations may be made. Twice a week during the summer a good soaking of cow or other manure water should be given.

Between the 10th and 20th of September, beginning at one end, take up each plant carefully; don't break off one tittle of root. Pot quickly into 5 or 6-inch pots, as size of plant suggests, in good soil. Cut off tops one-third, tie leaves upright loosely, give one good watering, stand in blocks snugly together; give water sparingly afterward, and in ten days take the pots inside, lay them on their sides under the benches, in greenhouse temperature and give no more water until ready to begin forcing them, or otherwise preparing them for flowering.

It was no small undertaking to get three thousand blooms together and send them in special care from New York to Toronto but no one who saw the display at Toronto will question the wisdom of the move or doubt that the cost was well repaid in results. Given a good rose, carnation or other flower, well-grown, and its mission is far from accomplished until it is well-sold. We know of no more direct way to attain this desired result than to show to the public in attractive form the various uses to which these flowers may be put.

The position
of the sweet pea

A correspondent in an English contemporary refers to the sweet pea as "next to the ever-supreme rose, indubitably the flower of the future."

This is a bold prediction—one which our friends, the carnationists, will view with an eye half-closed, undoubtedly—but stranger things than this have happened and to those who have watched the wonderful development of the sweet pea in this country and abroad during the past few years no prediction will seem incredible. Great as has been the improvement in varieties for general culture the advancement that appeals most strongly to us is in the winter-flowering section which, under the subtle mastery of such growers as William Sim, is already in a secure place among the choicest popular favorites in the cut flower market. And each year sees marked progress in some desirable characteristic.

A suggestion
in regard to the
Rose schedule

It is announced that the growers whose sensational displays contributed so much lustre to the Rose Show at Boston last year are to exhibit again in this year's exhi-

lition at Washington. This is good news and gives assurance that the American Rose Society is in a way to fully equal, if not surpass, the notable success of a year ago. That this knowledge will tend to greatly increase the professional attendance at Washington and swell the membership of the Society, goes without saying. We miss from the schedule, however, the decorative classes, such as the mantel and table centre piece competitions, which proved such strong attractions at Boston, especially with the general public and this is to be regretted as Washington can boast of florists with abilities in this line second to none in the world. Perhaps the omission may yet be remedied, as it should be, in the interests of the Society and the flower for which it stands.

Planting will soon be in order. One bit of planting, as important as any, and always in season you perhaps have overlooked or deferred. We mean an advertisement in *HORTICULTURE*. It will take but a few minutes of your time to attend to it and once done it will be like Sandy's tree, "growin' while you're sleepin'." Start now with a contract for at least 70 cents' worth each week during the coming year. It will yield an abundant crop.

A clever innovation On another page we call attention to the innovation of an exhibitor at the Carnation Show in Toronto, who, not content to stop at the customary vase displays, arranged to have his leading specialty shown in such manner as to depict its decorative value for various purposes.

SWEET PEAS AND DAHLIAS AS A WINTER CROP.

The extent to which the early flowering qualities of *Blanche Ferry* sweet pea has been developed is shown quite plainly by comparison, at the plant of W. C. Ward at Wollaston, Mass. A row of Burpee's Reselected Earliest of All, which was sent out by Burpee last season, as a type possessing a distinct gain in time of flowering, over all other sent out by that firm, was planted next to the wall entirely around the house. A row of seed sent out by Burpee two or three years ago, as *Extreme Earliest of All*, was sown in each side bench next to the walk. Across the middle bench rows of Zvolanek's Christmas pea were planted also one row of Extra Early. A heavy coat of manure was applied and worked in thoroughly, the seeds being sown about August 20. Reselected and Christmas both commenced to flower about December 10. *Extreme Earliest of All* grew tall without showing bud and was cut back. *Extreme Early* made a luxuriant growth of vine with no buds in sight the middle of January. Reselected threw a slightly superior flower. Christmas made a fine healthy stocky vine with marked tendencies of adaptation to forcing conditions. The long unbroken spell of dark, cloudy weather made a kind of treatment, much out of the ordinary line, necessary. Fires were banked a good part of the time and a temperature of 40 deg. at night and 45 during the day was as high as it was deemed safe to go, as a few degrees more of artificial heat would have induced a soft growth that would never mature into flowering wood, but wilt and droop upon the first appearance of the sun. When the sun did come out the temperature was allowed to run up and when this has occurred it went above 80 degrees for awhile. Under this treatment Christmas and Reselected threw a few flowers and *Extreme Earliest of All* made a slow growth but had to be cut back,—in some places the second time. If the weather should become bright and sunny and a temperature of 45 to 50 at night and 70 to 80 during the day be allowable, the last named would probably flower in ten or twelve days. *Extra Early* has made so much vine with such indefinite prospects of flowering that it will probably be pulled up.

Under favorable weather conditions, Mr. Ward thinks he might have had flowers by Thanksgiving, but even with this early flowering capacity developed, and making all due allowances for the unfavorable weather conditions prevailing the present season, he finds nothing to show that sweet peas grown from seed sown in the bench in August and given the entire space, will pay their way through December and January, with the high prices prevailing for carnations and roses this winter. \$1.50 per hundred for peas seemed to be the limit. With an easier market for other standard flowers \$1.00 would probably be the average and there is no reason to think they would throw flowers enough at these prices to prevent their being in debt the first of February. Earlier in the history of forcing this flower, seed were sown in pots in January and later planted out in the bench vacated by some other crop, and re-

sults obtained were satisfactory. Planted in the carnation houses and trained to the posts, also sown in violet houses in rows the right distance apart, so that they will be brought into flower when violets begin to grow poor, the short time required by Christmas and Reselected from seed to flower gives them a value beyond anything yet offered, but a house of peas grown as a house of carnations or roses is grown would enter into the late winter months, when they do begin to flower in paying quantities, with too much of a deficit to make the average for the season a reasonably profitable one.

Dahlias have also failed to fulfil promises as a winter flower at this place. Storm King threw a good crop for a while, then came small and single, then blind, and finally refused to grow at all. Kreimhilde, which looked exceedingly promising, during the middle fall, threw three or four marketable flowers to a plant and then stood still. They were both cut back to two buds the first of January, but as they have not started to grow again will probably be dug up, sweet peas having been planted between the rows. Compared with chrysanthemums they paid well for a late fall crop, but failed to give encouragement as a dependence for the full winter season. Possibly with more sunlight and a higher temperature, placed in raised benches, where they would be free from the chill and dampness which works up through the soil to some extent in the solid bench, a different result might have been shown, but if dahlias do possess winter flowering qualities it is a proposition as yet unproven at this plant in Wollaston.

G. H. HIGGINS.

PETUNIA THE QUEEN.

The illustration herewith shows the character of this superb double petunia better than any description we can

give. The variety originated with the Yates Floral Co., Canajoharie, N. Y., and will be distributed by that firm and the Scranton Florists' Supply Company jointly.

MOVEMENTS OF GARDENERS.

Robert Purshall has left Newport to assume charge of "Bookolt," Mrs. O. H. P. Belmont's place on Long Island, and Charles Philpot, lately assistant to Bruce Butterton at the "Elms," has been appointed Mr. Purshall's successor at "Marble House" and "Belcourt."

SAN FRANCISCO NOTES.

In time of storm a few weeks ago, while passing a refugee camp of shacks built for earthquake and fire sufferers with funds sent here by great-hearted philanthropists of the Eastern states, I took shelter in a shanty occupied by a landscape gardener of my acquaintance and found there two others of like trade. It was interesting to hear those scientists in gardeners' attire talk, and I made some mental notes of what they said, and this is a sample:

"American cities have found it profitable to learn from the example of Paris. Many of them have expended vast sums to make themselves attractive by the planting of trees and palms and shrubs and flowers, and all that have done so have reaped financial rewards while gratifying the civic pride and the love of the beautiful of their inhabitants. Among California cities, Los Angeles was first to realize the value of attractiveness as a commercial asset, and her people, actuated by wisdom as well as a broad spirit of local patriotism, have voted bond issue after bond issue to beautify with trees and flowers their attractive streets and parks. They have proved that it pays to improve and beautify, and they are reaping a reward that they have justly earned by their enterprise and public spirit. The freshest example of this philanthropic spirit is just over the bay in Oakland. They have a city mayor over there who is not under five indictments for serious wrong-doing, as is the case with San Francisco's mayor. Frank K. Mott is his name, a thorough gentleman whose expansive home gardens are one of the beautiful sights of Oakland. I have helped to make it so, and I know Mayor Mott very well. As mayor he won recently a good fight in which he actively participated, the result being a vote of his people, five to one in favor of a million dollar issue of bonds to beautify his city with additional parks."

AZALEA PHARAILDE MATHILDE.

Editor of HORTICULTURE:

Dear Sir:—In your esteemed paper of January 19th, page 83, I read, under the heading "New Plants," that *Azalea Verveana* gifted the trade with a fine new sport—a snow white, except the upper quarter, that is sprinkled with crimson, called *Prohilda Mathilde*. I wish to inform your readers that the so-called novelty is nothing else than the variety *Pharailde Mathilde*, which is in existence since twenty years; it won the gold medal in 1887. Its originator was Mr. Jos. Verveane, who got the unsurpassed *Verveana*, and it was from the very same *Pharailde Mathilde* that *Verveana* sported.

Hoping that you will give these few lines a little corner in your much-liked paper, I am, dear sir,

Yours very sincerely,

AUGUST HAERENS.
Somergem, Belgium.

NEWS OF THE CLUBS AND SOCIETIES

PITTSBURGH AND ALLEGHENY FLORISTS' AND GARDENERS' CLUB.

Tuesday, Feb. 5th was carnation night, always one of the most important meetings of the year. There was a good attendance of members who listened with interest to the secretary's report on the past year, showing that on Feb. 1st the club membership was 159, resignations during the year 6, deaths 1, members dropped 8 and new members 17, and a larger bank balance to the credit of the club than ever before. The auditing committee reported the secretary's books had been examined and found correct.

When the election of officers for 1907 was taken up, the vote of the club was cast for the officers of the previous year, viz.: Jno. W. Jones, president; E. C. Reineman, vice-president; Fred Burki, treasurer; H. P. Joslin, secretary; E. C. Ludwig, assistant secretary; P. S. Randolph, Jno. Bader, Fred Burki, executive committee. The salary of the secretary was increased for the ensuing year.

It was proposed by Mr. Burki that the delegation from Pittsburgh to the Carnation Convention at Washington, D. C., in 1908, be authorized by the club to extend an invitation to the convention to meet in Pittsburgh in 1909. The club viewed the proposition with favor and so ordered.

There was not as large a showing of carnations as usual from distant growers. The F. R. Pierson Co., sent fine blooms of their leaders, Winsor and White Enchantress. Winsor added to the reputation gained at the Toronto Convention, where this carnation won the prize for the best one hundred pink, the consensus of opinion being "the best carnation of its color." White Enchantress was well-liked also. The Pittsburgh Rose and Carnation Co. and J. L. Wyland, were the largest exhibitors of the home growers, the former showing fourteen or more large vases. Good stock was also shown by A. T. Lorch, A. R. Peacock, gardener Thos. Jenkinson, E. C. Ludwig, and the Pittsburgh Florists' Exchange. The Baur Floral Co. had on view several split carnations which had been mended with their new clips. The work was very neat and scarcely noticeable. The Maxfield & Dimond Co., Warren, R. I., also showed their artificial brass calyx. This seems to be a preventive rather than a restorer, and is applied to the calyx at the first signs of splitting. When it has served its purpose on one carnation it can be used on another.

When the subject for the next meeting came up, it was decided that a change from our stereotyped exhibition would be pleasant, and Mr. Wm. Falconer, was appointed a committee of one to obtain a specialist to address the club at its March meeting; the club furnishing any material in the way of flowers, etc., that the lecturer might need for illustration.

H. P. JOSLIN, Secretary.

FLORISTS' CLUB OF WASHINGTON.

The regular monthly meeting of the Florists' Club of Washington, D. C., took place Tuesday evening, February 6. The meeting was of unusual impor-

tance, embracing features of much interest to the trade in general. P. Joseph Lynch read an instructive paper on rose culture.

Quite a fine display of roses and new carnations was made. A vase of Golden Gate roses, grown by F. H. Kramer, was awarded a first-class cultural certificate. He also showed his rose, Queen Beatrice, not yet disseminated, but which had previously been favorably passed upon by the awards committee. W. S. Clark showed a seedling rose under the name of "Columbia," though not in sufficient quantity to be noted upon, and it will be shown later.

Among the new carnations shown by the F. R. Pierson Co. were vases of Winsor and White Enchantress, both exhibited for the second time here. H. Weber and Sons Co., of Oakland, Md., showed a seedling of Prosperity type named "Toreador" which was awarded 91 points. Mabelle, from the same grower, was favorably passed upon.

Nominations for annual election of officers resulted as follows: Peter Bisset, president; Z. D. Blackstone, vice-president; Charles McCauley, secretary; Wm. F. Gude, W. H. Ernest, treasurers; board of directors: G. C. Shaffer, F. H. Kramer, W. S. Clark, Mr. Mayberry and Jno. Robertson.

Much interest was manifested in the meeting of the American Rose Society, to be held here March 13, 14, 15. The annual banquet will be given on the evening of March 14 at the Arlington Hotel, to which members of the Rose Society will be invited.

GARDENERS' AND FLORISTS' CLUB OF BOSTON.

The next regular meeting of the club will be held at Horticultural Hall on Tuesday, February 19, at 8 o'clock. Mr. C. W. Ross of Newton will lecture on "Road Construction". There will be some very interesting exhibits on the tables. All florists having steam boilers or who use steam pumps are invited to meet the executive committee at 6 o'clock; any also who are not club members are just as freely asked to be present. The threatened drastic State legislation in regard to steam boilers should be an incentive to all who are directly interested to attend. The club hopes to be able to do something towards mitigating what now appears to be a serious menace to commercial florists and market gardeners.

W. N. CRAIG, Sec'y.

DOBBS FERRY HORTICULTURAL ASSOCIATION.

The regular meeting of this society was held on Saturday evening, February 9, in their room in Odd Fellows' Hall, R. Boreham in the chair. The prize of the evening was won by H. Keilling with a fine bunch of roses. There was an excellent display of cut flowers and pot plants, including mignonette, cyclamens and violets. C. Wilson staged a handsome new asparagus; H. Kastberg some very fine seedling amaryllises. The prize for the next meeting is to be for the best collection of cut flowers.

NEW BEDFORD HORTICULTURAL SOCIETY.

This society at its February meeting was favored by a visit from the secretary of the N. E. Dahlia Society, Morris Fuld, who took an active part in a discussion upon the classification of dahlias, and as the discussion was mainly upon the revising and preparation of the schedule for the autumn show, his remarks were highly appreciated. Owing to inability to obtain information as to dates and hall facilities, the executive committee was unable to present the schedule in a complete form, but hope to have it ready for distribution at the March meeting.

The monthly examination of plants and flowers, which it is hoped will be an interesting feature of future meetings, was left in the hands of the entertainment committee.

Mr. Fuld in the course of an interesting address spoke very highly of the position held by New Bedford in the dahlia growing world, both for the standard of its exhibition and the introduction of new kinds. Several names were enrolled on the membership list of the N. E. Dahlia Society.

NEWPORT HORTICULTURAL SOCIETY.

The schedule of premiums for the early summer or rose show of the Newport Horticultural Society is about completed; all that is now needed is the final approval of the whole society, which approval is already assured. This show will, it is hoped, this year be a good one; at least a generous amount of money is appropriated for premiums, and the list is made as comprehensible as possible. Last year there was no rose show—a lapse that many regretted. Five hundred dollars will be given for premiums listed in the schedule as now arranged, and the expectation is that the special prizes will be fully as numerous as usual; several are heard of already. As soon as the schedule for this has been approved the committee will go straight to work on that for the autumn or dahlia show, which will be bigger still; it will be held in September.

DETROIT FLORIST CLUB.

The last meeting of the Detroit Florist Club was well attended, the principal attraction being a carnation show. The Chicago Carnation Co. exhibited vases of White Perfection, Aristocrat and Red Riding Hood. Van Booslager showed Moonlight and Pink Lawson, and the F. R. Pierson Co. Winsor and White Enchantress. Among local exhibitors were Malost with 200 Lawson of the quality of five years ago, also the largest and best violets seen hereabouts this season. Thos. Brown excelled all others with White Enchantress. Albert Staehlen, a progressive young carnation grower, surprised all with excellent vases of White Lawson, Rose-pink Enchantress, Pink Lawson and fifty blooms of a new and very promising white seedling, and the same may be justly said of fifty blooms of a seedling of darker pink and much larger size than Lawson. These are two seedlings which,

CARNATION WINSOR IN DECORATIVE WORK.

BOUQUET ARRANGEMENT

By J. Ivera Donlan.

In previous issues we have pictured the various carnations winning high honors at the recent Toronto meeting of the American Carnation Society. In this page and the frontispiece of this issue we show that phenomenal success, Winsor, in decorative array, the frontispiece being a charming illustration of the natural arrangement of

BASKET ARRANGEMENT

By J. Ivera Donlan.

carnations as a centre piece, the handiwork of that skilful New York decorator, J. Ivera Donlan. The two excellent arrangements shown on this page are by the same artist and portray effectively the charm of simplicity which it would be hard to improve upon in either instance. Mr. Donlan accompanied Winsor to Toronto, and in addition to the arrangements above

mentioned, put up a fine mirror decoration as a demonstration of the possibilities with a single variety in the hands of a tasteful artist. In thus displaying his pet variety we think Mr. Pierson showed rare business judgment, and the example set on this occasion is likely to have a marked effect on future exhibitions of the American Carnation Society.

in the near future, will absorb the attention of the progressive carnation grower. The discussion of the evening was Carnations, and Carnations again, and Carnations repeated.

THE AMERICAN ROSE SOCIETY.

A meeting of the executive committee was held February 11th, in Traendly & Schenck's office, New York city. The President, Mr. Simpson, reported that Robert Craig of Philadelphia, Wm. F. Kasting of Buffalo and P. J. Hauswirth of Chicago, had consented to act as judges at the Washington Exhibition.

There also has been added to the list of special prizes a \$25.00 prize by W. A. Manda of South Orange, for the largest and most varied collection of cut roses of all classes, one or more blooms in a vase; Wm. H. Ernest of Washington, D. C., \$25.00 for a group of decorative plants covering at least 100 sq. ft. of space; Vaughan's Seed Store, of Chicago and New York, \$10.00 in gold for six plants of White Baby Rambler Rose grown in pots 5 inches or larger; for the best vase of Yellow Roses of any variety \$10.00 in gold by Siebrecht & Son, New Rochelle; for the best 50 blooms of Golden Gate a Silver Cup valued at \$25.00 by W. Atlee Burpee & Co.; for the best 25 blooms La Detroit \$25.00 by John

Breitmeyer's Sons, Detroit, Mich. The schedule of the Society's prizes covering the joint affairs of the American Rose Society and the Florists' Club of Washington was submitted but there will be a supplementary list issued, as this list of prizes is increasing as many people have shown an interest to take part who have not been heard from until within a few days.

Mr. E. Gurney Hill will read a paper upon new varieties. There will be two questions offered for discussion at the Society meeting and they will be as follows: First, What definite work can the American Rose Society take up at this time for its members, in particular, for the rose-loving public in general, that it does not now do. Second, Granted that a large increased membership is desirable and essential to the permanence and usefulness of the American Rose Society; how may it best be accomplished; where shall we find ready response, amongst the professional florists and gardeners or what are commonly called "Amateurs".

The Secretary reported, that a report was now in press covering the matters of the past, the constitution of a Society, and a chapter on roses from the Woman's Hardy Garden by Helen Rutherford Frye. This work follows in the line which was begun by Mr. W. J. Stewart a year or more

ago and is intended for distribution to members and others interested in becoming members of the Society.

The Florists' Club of Washington are making strenuous efforts to make this show a decided success. The Arlington Hotel has been chosen as the headquarters of the American Rose Society. The official meetings of the Society will be held in the exhibition hall, cor. 15th & E Sts., N. W., Washington, D. C., the first meeting beginning at 8 P. M. on March 13th.

BENJAMIN HAMMOND,
Secretary.

Fishkill-on-Hudson, N. Y.

NEW YORK FLORISTS' CLUB.

The twentieth annual dinner of the New York Florists' Club will be held Saturday evening, February 23rd, 1907, at St. Denis Hotel, Broadway and 11th street, at 7 p. m. John Scott, John Birnie and Walter F. Sheridan are the committee in charge, and those who attend are assured of a glorious time.

W. A. Manda is laying out and planting the park which has been established at Aspinwall, Pa., in connection with the filtration plant for the city of Pittsburgh. The park occupies 112 acres and will be planted in natural style with trees, ornamental shrubs, etc.

A FEW WORDS FOR THE ROSE SOCIETY.

(P. Joseph Lynch before the Florists' Club of Washington, D. C., February 5th, 1907.)

Your President and Secretary have done me the honor of extending an invitation to say something to you in regard to the American Rose Society and the joint exhibition it will give in connection with your Club in this city next month. It has been suggested that I give a general talk with reference to the Society, what it has accomplished in the past and what it expects to do in this city. I will give you no occasion for alarm in thinking that I intend to read an exhaustive essay, because I feel that all of you are aware of the splendid work the Society has done in advancing the welfare of the rose. In these few notes I hope to cover briefly the scope of the Society and enlist the earnest and enthusiastic support not only of the members of your Club, but your friends outside of the florists' profession as well.

The American Rose Society was established in 1899, with the broad purpose in view of extending the popularity of the rose among commercial growers, as well as amateurs; to increase the general interest in its cultivation; to impress the standard of excellence; to foster, stimulate and increase the production in every possible way of improved varieties suitable to our American climate. Since its inception it has made steady progress, until now the announcement of an exhibition under the auspices of the Society attracts thousands of interested growers and spectators from all parts of the country. It may be safely said that at the last exhibition held in Boston there was perhaps shown the most magnificent collection of roses, embracing almost every class, ever staged in this country. At that meeting Mr. Sander of St. Albans, England, remarked in his address there, "If the exhibition I see here could be transferred to our Horticultural Hall in London I am sure it would create a profound sensation. Your American Beauty and Richmond roses are as good, if not better, than any I have ever seen."

The Society exhibitions have been instrumental in bringing about a keen but friendly rivalry between our commercial growers, and the value of this is readily apparent, because it stimulates the grower to give the growing of his plants that attention necessary to bring them to the highest degree of perfection, for the purpose of exhibition, thereby increasing the productiveness of his business in cash returns. Then, too, in setting a higher standard of excellence he advances the popularity of the rose in bringing forth its wonderful possibilities. Instead of going about his work in a careless manner the grower, if he be interested in the progress of the Society, will seek to outdo his brother grower in results, with the two-fold advantage of which I have spoken. This is the monetary view of the good that the Society has done, and apart from this commercial phase it has brought to light where the rose-loving public may see the creations of the world beautiful to a high degree of perfection, thus demonstrating the skill of our growers.

These exhibitions are productive of benefits even to the grower who does not exhibit, but who in order to compete in the open market must perforce grow first-class flowers to hold his own—in short our Society is the harbinger of better prices for every grower. While we do not have the great number of new roses that the European growers exhibit at their great shows, yet we are steadily increasing in the creation of new varieties, as has been well testified to in the past three years, during which time there has been more new roses of merit introduced by American growers than perhaps in a decade previous to that time. Interest in hybridization has been stimulated, and while the work differs very materially from that in carnations, inasmuch as the later flowers responds so readily to the efforts of improvement, yet we are proud of the many new varieties that have first seen the light of day in America and have been shown at the exhibits of the American Rose Society. Then, again, in this branch of the work the necessity for roses that will adapt themselves to our varying climate has been clearly shown, and by intelligent efforts we have accomplished something we have never had before, and that is the creation of roses to suit the planter of the South, as well as the grower in the North, not only for the commercial florist, but especially for the amateur grower, who after all is first to be considered, because if we can enlist the support of the great masses of amateur rose growers in all parts of the country by helping them to succeed we know not to what extent the power and influence may extend in beautifying our land and increasing the revenues of our growers. We have found by experience that out of the multitude of new roses sent us from Europe there are but few that have adapted themselves to our climatic conditions, so that it would seem to be the cardinal work of this Society to demonstrate that which is best and that which is not best for professionals and amateurs alike, and this can be only accomplished by unity of action among growers, enthusiastic love for the rose, and a spirit that what is good for one of us is good for all. The wants of the buyer of our product vacillates from time to time, and in order to keep abreast of the times and secure flowers that will bring the best price we must needs have some means of acquiring this knowledge, as well as of disseminating it. While Bride, Bridesmaid, Golden Gate and Tea roses of similar character, whose popularity perhaps has not diminished because of the increased number of people who buy, yet it would seem, to touch upon this subject briefly, that as ex-president Montgomery of this Society very aptly stated that the rose of the future will undoubtedly be raised from a mixture of the Tea and Hybrid Tea, producing a Hybrid Tea of the type of Tom Field and Queen Beatrice, your home roses, Richmond, Liberty, Miss Kate Moulton and others, all roses of the Hybrid Tea class, because of their high and positive colors, which are now so much wanted. Then, too, these roses require more skill in growing, which means more attention, resulting in the very condition spoken of previously, that the grower secures

in the end a greater return for his labor than he could hope to do were we to continue to be satisfied with the favorites of former years. So much for what the Society has tried to do in the past.

Now as to what it may expect to do in the future and in this city, the subject is one that I would not attempt to outline, because it is entirely dependent upon the combined effort of the growers what may be accomplished. If the Society goes forward as rapidly in the future as it has in the past it will accomplish a wonderful good for everyone engaged in the florists' business, not to speak of the great masses of people outside of the florists' trade who are interested in roses. My purpose of being with you is more to ask that the Florists' Club of Washington will give us that earnest support that we know that they will, feeling that in doing so we are helping each other. We want more members, not only florists but those outside of the trade, and in order to make the exhibition here a success let us bend every possible effort to increase the membership of the Society and stimulate the public interest in our efforts, and with your hearty co-operation we shall have without doubt the best meeting and most attractive exhibition even given by the Rose Society.

As to what we expect to do at the forthcoming exhibition in your city I am unable to give a list of the number of prizes to be offered, but you may depend upon it that there will be a splendid showing. In Boston, if I recall properly, we had about fifty prizes, cups and in cash, with over one hundred competitors. Our president, Mr. Simpson, at the meeting of the Executive Committee a few days ago in New York informed us that there would be more prizes of greater value offered this year than ever before, and this list will be ready for publication in a very short time. It is yet early for entries, but with your co-operation I feel safe in saying that this will be one of the greatest exhibitions ever held in this country. I would specially ask that if possible the Washington society people be asked to donate some special premiums, to be published in the supplementary list, in order that we may secure their hearty co-operation in bringing the attendance up to the highest mark.

I shall be glad to answer any questions I can in regard to the number of vases required, the height of the benches, and give such information as I have at command, and before closing these remarks let me again urge your club to give us the very best hand you can in order to push the good work forward, so that it may be said that the Washington exhibition far outshone that which has become so famous held in Boston last year.

If there are any present who are not members, now is the time to get aboard and get a seat in the prow of the boat, even though, as Mr. Montgomery has said, you do get splashed with an occasional wave.

He stood and gazed despondently at the benches crowded with plants all overgrown and lank. "The postman brings bills but no orders. For weeks not an order has come in." Who was he, so unfortunate? *Only a man who doesn't advertise.*

AN AMATEUR WITH A RECORD.

Most of us have heard of, and some of us have seen, the cottage gardens of England and Scotland, and remember with delight the geraniums, fuchsias and gladioli that the shoemaker found time to bring to perfection in his kitchen window. We have heard of the amateur exhibitions of plants, cut flowers and bouquets, and the fine collections of vegetables, exhibited by mechanics or laborers, and all tended before and after a ten-hour work day.

As a boy in Scotland I have pleasant recollections of James Nichol, stone cutter, the subject of this sketch, then in the prime of life, working in his garden, a piece of rented land a mile distant from his home. Morning and evening he dug every foot of it with a spade, planted his potatoes with a dibble. Leeks, cauliflower, cabbage, peas, parsley, etc., were the usual crop of vegetables; strawberries and gooseberries for fruit, grew to great size and perfection in that climate. And, besides, the usual collection of herbaceous plants and dahlias that were dahlias, always had a place in some of the borders. He was one of the many who did such things for the love of it and the sport of competition at the annual horticultural shows. Mr. Nichol came to America in 1872. The next that I saw of him was in Quincy, Mass., in 1884. He was still working at his trade and tending his garden in spare moments. The first thing that attracted my attention was a circle of carpet bedding on his small but well-kept lawn, while in the rear besides some fine fruit trees and a vegetable garden was a hotbed of six sash—something not usually seen in the back yard of our American working man. One would suppose that after laboring all day in our excessive summer heat that this, without counting in the short twilight and the troublesome mosquito would have dampened his ardor, but it is his way of resting himself, and for

this last ten years he has been resting himself growing chrysanthemum blooms for exhibition.

Commencing with an ordinary sash house he grew some elegant single-stem plants which it required a good deal of pressure to induce him to exhibit, but his first attempt brought several first and seconds and all the old zeal and sporting blood was set in motion. Up went the modern house shown in the photograph. Ever since he has been a successful exhibitor at every chrysanthemum show held in Boston. This picture shows Mr. Nichol and three generations of Nichols. One face is absent that should be there if it were not for the retiring modesty of its possessor—a face so sweet and pretty yet that one readily concludes that fifty years ago Mr. Nichol had good judgment and an eye for the beautiful. Any reader must know that a house of blooms like that shown herewith did not take care of itself all day; some one had to keep an eye on the temperature and of course that someone had to be very much interested to know how.

It is not surprising that when the city of Quincy required a capable superintendent for their cemetery they turned to this man who had always been known among them for his skill in horticulture, whose cottage and garden had been a model for others, and persuaded him to accept the situation. And those who saw the cemetery then and have seen it every year since are not surprised that Mr. Nichol gets his re-appointment without question as the years come and go. We, in the vicinity of Boston, all know him. He is a useful and enthusiastic member of our club.

It would be interesting to know whether there is now or ever was in the United States another man working steadily at his trade who has a modern greenhouse in his back yard for his amusement and who grows and

competes at the horticultural shows. Many a toiler after this world's goods in the spirit of our American commercialism, may say: "That's all right, but what has he got out of it?" Well, not dollars, that's certain; but something better, health and a good healthy ripe old age. He is as rugged yet as the granite that he hammered for 40 years and would not change places with John D.

GEO. M. ANDERSON.

CLUB AND SOCIETY NOTES.

The Illinois State Florists' Association will hold a meeting and exhibition at Bloomington, on February 19 and 20.

The schedule of prizes offered by the North Shore Horticultural Society, Manchester, Mass., for the year 1907 has been issued. The rose show will be held in June and the summer show in August. Copies of the schedule may be obtained by addressing the secretary, James Salter.

The Tennessee State Nurserymen's Association held their annual convention at Nashville on January 30. A committee was appointed to secure an increased appropriation for the state entomologist; legislation looking to the preservation of the forests was recommended. The officers were re-elected. A smoker in the evening closed the meeting.

The Alabama State Horticultural Association held its fourth annual meeting in Montgomery on February 6. Among the speakers were P. J. Berckmans, Augusta, Ga., on "Shrubs and Vines for Home Planting"; W. B. Peterson, Jr., on "Roses and Their Culture"; Prof. W. T. Clarke and Dr. E. Mead Wilcox of Auburn. W. F. Heikes of Huntsville and R. S. Mackintosh of Auburn have been president and secretary respectively of the society since its organization.

PERSONAL.

R. H. Tacke has been appointed superintendent of parks at Lexington, Ky.

Wm. Donaldson succeeds the late James Braik in the park department at Buffalo, N. Y.

Israel Rosnosky, representing H. F. Michell, Philadelphia, has been canvassing the Boston trade this week.

S. S. Skidelsky has been hustling in Detroit for the past few days. Andrew Ramsey of Newport, R. I., was a recent visitor.

Robert Boeck of Hyde Park, Cincinnati, Ohio, was terribly injured February 4 by being dragged a long distance by his runaway horse that he was taking out for exercise.

Visitors in Newport: Thomas J. Grey of Boston, W. N. Campbell, John S. Hay, of H. A. Dreer Co., Philadelphia; Mr. Folger, of the "Bonnie Brae" Nurseries, New Rochelle, N. Y., and John R. Clark of West Roxbury, Mass.

EXPERIENCE WITH THE CARNATION.

(Abstract of a Paper Read Before the Florist Club of Philadelphia, by John E. Haines.)

Mr. Haines read a very interesting and practical paper on the above topic on February 5. He told of his earlier experiences in horticultural pursuits and the building of his first greenhouse for lettuce and radish growing, his success in this line and the addition of other houses from time to time until the limit in lettuce growing had been reached and the perusal of the horticultural trade papers had started the carnation bee a-buzzing in his bonnet. One interesting statement was to the effect that a package of carnation seed which was received from the free-seed department at Washington was the beginning of the strain from which has developed the progeny with which his name is commercially connected. He said:

"The Government stock came mostly in bull-heads and single blooms. There were also a few very fine plants, possessing fine stems and vigorous growth amongst them." We hybridized these with the following standards: Jubilee, Crane, Wm. Scott, Lizzie McGowan, New York, Albertini, etc. I was very successful and got numerous good ones. Would raise them for a while, discover some bad trait, then discard them. Kept on trying and discarding until I secured enough stock of seedlings of my own, which, compared with the standard varieties I had on the place, were superior to those in my opinion."

Mr. Haines told of his first venture at the exhibition in Brooklyn and his experiences in common with all who exhibit at the flower shows—the elation of success or the discouragement and subsequent determination to yet excel, when failure was recorded. Continuing he said: "The soil on my place is a heavy clay. I prepare it by making compost. Have never had experience in growing carnations in a sandy soil, but I believe it can also be prepared in compost to grow carnations equal to those grown in clay soil. It may even do better. In feeding the plants I begin as soon as I have fire in the house. Feed them lightly now and then and keep them on the move. I do not use the liquid manure; I use sheep manure, bone flour, air-slacked lime and wood ashes."

"Have not kept a night fireman except on extremely cold nights. Run my houses between 45 and 52 degrees. In one of my houses I have taken out the partition on one side for growing violets. The temperature of this place is usually about 45 degrees when the others are 50 degrees. Here I always have been growing carnation John E. Haines. I find that in this house the best flowers are produced and yet the plants are very prolific."

"The troubles connected with the raising of this flower I have also met with and have been kept busily fighting. One of these at one time was stem rot. There are many different opinions on this question; I will give you the experience I had in one year. In the fall I buried vegetables, such as turnips, radishes, beets, etc. In the spring time, when the ground was prepared for planting, there were still in a certain patch vegetables that had either rotted or frozen, also some salt

hay, which had been used for covering bulbs and tomato vines grown the previous year. Here I planted my young stock of carnations. The plants raised on this patch suffered with stem rot. It was peculiar that only these plants were infected. Those which did not get it in the field got it after planting in. This taught me that I must be very careful not to have any decaying or fermented matter around the place. I have since been very strict in the matter of cleanliness. All refuse must be taken away immediately and surroundings must be kept sweet and clean. I have used air-slacked lime occasionally for this purpose.

"As to rust, I find that by taking the best of care of the plants, beginning at the time of planting in and using all the precautions that would be used if they were infected right along, this trouble will seldom appear at all. 'An ounce of prevention is worth a pound of cure.' My plants are watched closely and if any show the least symptoms of it the infected leaves are at once taken off."

"To avoid thrips and green fly, the plants are sprayed with Nicotidine, say once a week, but precaution is used in choosing a bright day for the work. This treatment I also begin as soon as plants are put into the house, and find it more successful than smoking."

LIBRARY NOTES.

A Book of English Gardens by M. R. Cloag. (Methuen & Co., London.) In my first contribution to HORTICULTURE under the heading of Library Notes, reference was made to a handsome art volume in folio entitled "Some English Gardens." The somewhat attractive and prettily illustrated book now under review is in a like way devoted to English gardens and contains many charming little pictures in the best style of color printing but the places dealt with by the author are entirely different from those referred to in the larger work. Abbotsbury, Albury, Ampthill, Ashbridge, Brownsea, Hatfield, Holland House, Knoll, Sutton Place, and Wrest are among the gardens selected for treatment. The artist is Miss K. M. Wyatt whose series of 24 bright little water color reproductions largely introduce the houses as a fitting background to many of the gardens depicted. The book is neatly and tastefully bound in cloth, gilt; it contains 340 pages. The opening pages are devoted to an historical account on gardens beginning with reference to Egypt and Babylon, and passing onward through the days of ancient Rome down to later times, chiefly in England. The frontispiece is a view of Holland House and garden, and is an instance of what may be accomplished in a great metropolis in the way of the gardening art. "The Terrace, Albury," is a pretty little bit of work and so too is "The Terrace, Brownsea." A genuine piece of English rural scenery is "a cottage garden, the Isle of Wight." Very effective is "the terrace border, Ham House," and it makes a metropolitan amateur wonder how the country gardener can secure such a display of hardy herbaceous flowers as we sometimes see in the pictures of the grand old country gardens. "Rhododendron Knoll" is another exquisite little floral gem.

C. HARMAN PAYNE.

TWO CANADIAN TROPHIES.

Herewith we take pleasure in showing illustrations of two of the nicest cups competed for at the meeting and exhibition of the American Carnation

Society at Toronto, Canada, last month. The Canadian Horticultural Association's trophy was offered for the best six varieties of carnations, fifty blooms of each. The Montreal Gardeners' and Florists' cup was pre-

sented for the largest and best display of carnations in the exhibition. Both cups were worthily won by the F. R. Pierson Company of Tarrytown and Scarborough, N. Y., and Mr. Pierson is justly proud of them.

A CORRECTION.

In the paper by R. O. King, published in last week's HORTICULTURE, a line was accidentally dropped out of the first column on page 165. It should read as follows, the missing words being those within the brackets: "The glass people say that the workmen do not like to make [greenhouse sizes because they can make] more money on larger sizes."

OBITUARY.

George A. Sutherland.

George A. Sutherland, wholesale florist of Boston, died suddenly on the morning of February 11. Mr. Sutherland was born on December 14, 1865, in the parish of Bohann, County of Elgin, Scotland. At the age of 13 he came to this country and lived in Athol, Mass., where his father and brother carried on a florist business. When about 21 years of age he entered the employ of W. J. Stewart in the wholesale business in Boston, and five years later, in partnership with Lucius Peck, purchased the business of Mr. Stewart. Mr. Peck dying the following year, Mr. Sutherland came into possession of the business, and for some years conducted it successfully, but latterly came into financial difficulties, which, preying on his mind, are presumed to have hastened his death. Mr. Sutherland was a man of kindly heart and had many sincere friends in the trade. He leaves a widow.

John P. Loftus.

John P. Loftus, a well-known gardener at Mt. Hope Cemetery, Boston, died on February 11, aged 68 years. Mr. Loftus was a fellow-employee with Jackson Dawson at the old nurseries of Hovey & Co., at Cambridge, and, like Mr. Dawson, enlisted in the 19th Mass. regiment at the opening of the Civil War, he serving in Company K and Mr. Dawson in Company G. Mr. Loftus was wounded and discharged but later went into the navy. On his return he resumed his gardening employment at Lenox, Mass., and remained many years until his health broke down. In recent years he has had charge of the tropical plant department at Mt. Hope Cemetery under superintendent J. H. Morton.

Mrs. Mary Somers.

Mrs. Mary Somers, wife of Harry C. Somers, a well-known grower of Washington, D. C., died at her home on Chain Bridge Road on Monday, 11th inst., after a long illness. Mrs. Somers is the only daughter of Solomon Davis, who with his three sons, has for a number of years been successfully engaged in growing violets and miscellaneous plants. Deceased was 60 years of age, and is survived by husband and one son. We tender our sympathies to the bereaved families.

John Brick.

John Brick, a retired florist, died in Franklin, Mass., on February 1, aged 65.

BUSINESS CHANGES.

J. B. Steussy has opened a retail store at 417 E. Market St., Louisville, Ky.

Huebner & Brown have opened a retail flower store on Washington street, Chicago.

John H. Bath, formerly with A. Donaghue, has opened a retail store in Omaha, Nebr.

Mr. Reynolds retires from the Scott Floral Co., at Denver, Colo., and will locate on the Pacific Coast.

The Benthly-Coatsworth Company

NEW DRACAENA PERE CHARON.

Foliage twice as large as that of *D. terminalis* and equally brilliant in color.

have moved to the second floor of the Atlas Building, Chicago.

The Gallup Floral & Seed Co. will soon be in their new quarters at 819 Sixteenth St., Denver, Colo.

W. H. Fickett has purchased the establishment known as LaRochelle, 21st St. and 8th Av., New York.

Dunn & Huebner, Chicago, have dissolved partnership and the business will be carried on by Henry C. Dunn.

The Garden, Tarkington Baker, manager, will soon be ready for the retail florist business in Indianapolis, Ind.

The Elmwood Select Nursery under the management of Frank Brown, is a new concern located at Paynesville, Minn.

C. W. Archer has purchased the dahlia business of W. W. Hathaway of Brockton and has combined it with his business at Middleboro, Mass.

Miss Anna J. Schulte has again appeared in the arena of the retail trade and displays her shingle at the department store of Partridge & Blackwell, Detroit.

H. G. Dilleuth opened his new store on Spadian Avenue, Toronto, Can., on February 2, with an orchestra and superb decorations as attractive features.

Under the name of the Ozark Nursery Co., Ben Davis will continue the business of the Ben Davis Nursery of Bentonville, and the Parker Nurseries, at Fayetteville, Ark.

At a meeting of the directors of the Conard & Jones Co., West Grove, Pa., called after the death of the president, A. F. Conard, a reorganization was effected by electing Mark Hughes of West Grove a director, and officers as follows: President, Robert Pyle; vice-president, Antoine Wintzer; treasurer, S. Morris Jones; secretary, R. T. Satterthwait.

LIST OF PATENTS.

SEED SOWING.

There are so many kinds of plants that can be raised from seeds sown at this time of the year that to some at least the methods adopted with success in the work of sowing and the preparations incident thereto may be of considerable interest if not in a measure helpful.

The first consideration is the procuring of seed of the best strains and varieties from reliable dealers whose reputations are a very fair guarantee, despite any disclaimers to the contrary, that what is purchased will turn out to be just what it was represented to be.

After the seed comes to hand and when the proper time comes (which for a great many things is the present) immediate preparations should be made for sowing. Seeds of the greater number of bedding plants should be sown in shallow flats or seed pans about 3 1-2 inches in depth. Drainage should be provided by first placing over the holes or spaces between the boards in the bottom, pieces of broken pots, and over them a layer of whole sod, well rotted, but wholly adhesive; then fill to within an inch of the top with good free soil, suitable for most seeds if composed of fibrous loam with a good sprinkling of leaf mould and sand unsifted. Over this place a thin layer of finely sifted soil of much the same nature as of which the main part is composed. It is very important that this last layer be made perfectly level in order that when water is applied, the fine seeds will not be washed to one side. Sow all seeds evenly over the surface and seeds that are of a gritty nature and moderately large as well as the larger seeds, ought to be covered with fine soil, but before doing that, press them down to bed in the soil with a clean board. Very fine seeds such as begonia and calceolarias, should not be covered with soil only pressed on the surface. When the sowing is satisfactorily done a careful watering will be in order with a watering pot with a very fine rose attached, after which, place squares of glass over the flats or pans, and put these in a warm part of a house where a gentle bottom heat is available. Very little water will be required for most kinds of seeds until they germinate, but the soil should never be allowed to get dust dry.

When the seedlings have appeared well over the surface, the flats or pans should be removed to where they can get full light and sufficient air. The best way is to place them on a shelf near the glass, but always taking care that at first they will not be suddenly subjected to draughts of cold air, otherwise they will very likely depart this life when only on the threshold of it.

After the seedlings are thus gradually exposed to sun and air and they have attained a size fitting them to be conveniently handled, it will be necessary them to prick them off into other flats filled with good soil, or pot singly into the smallest size pots. For most things, for the first moving, the method of transplanting into flats is the most practical in that usually a smaller percentage die than when the other method is adopted. Again, when the seedlings begin to crowd in the flats, it will be advisable in most cases

to pot them into pots of a size in proportion to the root they have made. When pricking off or potting seedlings for the first time, they should be shaded lightly until they get somewhat established. After all this, subsequent treatment comes much easier to the operator and also to the subjects operated upon.

New Orchid-Flowered Sweet Peas

These are a distinct "break" in Sweet Peas, differing from the standard sorts by the extraordinary size of their flowers, usually measuring 2 inches across, and by the standards being crinkled and wavy, while the wings are large and spreading. Another splendid feature is that a very large percentage bear four blossoms to the stem, which are long and strong. To sum up, they possess every characteristic that can be desired in Sweet Peas, and will undoubtedly supersede standard sorts of same color as soon as they become more plentiful.

Countess Spencer. A lovely clear pink, shading darker at the edges. 10c per oz., 25c per ¼ lb.
E. J. Castle. Rich carmine-rose, shaded with salmon, very striking, especially under artificial light. 17c per pkt., 5 pkts., 75c.

Frank Dilby. The largest and finest pale lavender-blue. 17c per pkt., 5 pkts., 75c.

Gladys Unwin. Charming shade of pale rose-pink; extra long stems and very valuable for cutting. 10c per oz., 25c per ¼ lb.

Helen Lewis. (Orange Countess) Brilliant orange-rose. 25c per oz.

Helen Pierce. This is the new gloxinia-flowered Sweet Pea, being marbled blue on a white ground, with the veins showing a little deeper exactly like a mottled Gloxinia. 15c per oz., 50 per ¼ lb.

John Ingman. Rich salmon-rose. 15c per oz., 50c per ¼ lb.

Mrs. Alfred Watkins. A superb pale pink similar in shade to the old Princess Beatrice. 17 per pkt., 5 pkts., 75c.

Nora Unwin. The finest white now in existence. 17c per pkt., 5 pkts., 75c.

Phyllis Unwin. A veritable giant among Sweet Peas; color a deep rose-carmine. 15c per oz., 50c per ¼ lb.

NEWS NOTES.

The weight of snow is responsible for \$200 damage at the Kingman greenhouses, Middleboro, Mass., recently.

The greenhouses of Rev. H. P. Fleming, Orange, N. J., were destroyed by fire on February 10.

A greenhouse belonging to Mrs. C. D. Kingman, at Middleboro, Mass., was crushed by the heavy snow last week.

John D. Rockefeller, it is said, will lay out in front of his mansion at Pocantico Hills extensive Italian and French gardens.

About twenty of the florists of Springfield, Ohio, visited their brother florists in Urbana on the evening of February 6.

Mr. Gerlach, in charge of the greenhouses at Mitchell Park, Milwaukee, Wis., has invited the public to inspect the orchids and azaleas which are especially beautiful at this time.

Civil service examinations are to be held in Boston on February 27 for farmers in the Indian service, salary \$600 and \$720; March 6, for French translator in the Department of Agriculture, \$1500.

The opening of a new department store in Detroit recently was the occasion for a large display of floral gifts estimated to have cost nearly \$2000 in the aggregate. Detroit seems to be all right.

The friends of the school children of Washington, D. C., are hoping that the item of \$1,000 appropriated for school gardening will be restored by the Sen-

ate to its place on the Bill from which it was stricken by the House.

It is reported that Col. Oliver Payne of New York has purchased the Garland estate on Prudence Island, Newport, R. I. This estate is very extensive, comprising a good part of the whole island.

Mr. F. R. Proctor of New York has just purchased Southwick's Grove in Middletown, R. I.—a place which has long been famous as a picnic ground. In the hands of the new owner it will be improved and turned into a handsome residential estate.

The South Park Floral Co., New-castle, Ind., are reported to be looking for a building site in the suburbs as business has centered around their present location and the land has become very valuable. Their removal will be gradual, as new greenhouses are required.

Protest was made by Alex. Murphy & Co. against the assessment of duty by the collector of customs at the port of Philadelphia on cycas stems, classified as nursery stock under paragraph 252, tariff act of 1897, claiming that these goods should be free of duty under paragraph 552, as palm leaves in their natural state. Protest has been overruled by the general appraisers.

Protest of J. L. Hopkins & Co. against the assessment of duty on pumpkin seed by the collector of customs at the port of New York, has been overruled.

BUSINESS EMBARRASMENTS.

George Vaselos, florist and confectioner of 3102 Third avenue, New York, has been petitioned into bankruptcy.

Burnet Galloway, dealer in seeds, Syracuse, N. Y., has filed a petition in bankruptcy; liabilities, \$21,738; assets, \$7,500.

Czar Cannon, ruler of the House of Representatives and dictator of legislation, still refuses to admit the Appalachian and White Mountain forest reserve bill, despite the urgent solicitation of the governors of the states affected directly or indirectly and in defiance of the solid sentiment of the southern and eastern Atlantic States. Speaker Cannon's action, if persisted in, means a loss to the people which cannot be computed in dollars. The fate of this measure, passed by the Senate, endorsed by the President, and beyond question sure of a passage through the House, is an example of what one man's power may become in our present system of law-making. —New England Homestead.

PHILADELPHIA NOTES.

Mr. Faust of the Pennock-Meehan Co. has not yet (12th inst.) reached the crisis of the typhoid attack, but is regarded by his physicians as having a good chance to weather it.

Lent does not cut so much of a figure here as it used to. There are plenty of weddings and other functions in sight to keep the trade busy. After the first three or four days things get back to normal.

Mr. Peacock states that the report of the fire at his home last week was incorrect. On further investigation we find the disaster was at the house of his partner. Our expressions of sympathy are therefore just as much in order.

Jno. H. Dodds, the superintendent at the Wanamaker country home, was in town when the fire broke out. The mansion was completely destroyed, causing fifteen hundred thousand dollars' damage. The strenuous life led by Mr. Dodds in getting home and the exciting work following would fill a volume to recite. It was a case of salvage; no water; plugs all frozen.

Wm. C. Smith disagrees with J. D. Eisele of Dreer's in regard to Boston and Scotti ferns. As I remember it, Mr. Eisele could grow 25 per cent. more Scotti in the same space. Mr. Smith says he can grow more Bostons in the same space without losing their leaves. This is an interesting problem and according to the rules of debate Mr. Eisele has the first say, but he has to give particulars. After that Mr. Smith can follow with his points.

The Dumont store has been rented by Berger Bros. Messrs. Berger will refit and improve the interior and expect to move in by March 1st. With the well known energy and enterprise of Messrs. Berger things ought to hum once more at 13th and Filbert—having been pretty dead there since the removal of the market to Pennock's.

The event of this week in wholesale circles has been the opening of the new Niessen store. They have been visited by hosts of old friends and customers to wish them good luck and to admire the up-to-date arrangements for the efficient dispatch of business, from the ice making plant in the basement to the offices and supply departments on the upper floors. The address is now 1209 Arch St.

CUT FLOWER MARKET REPORTS

BOSTON Our price quotations show the top value on American Beauty, \$100 per 100. It might as well be \$200 as \$100, as the grade indicated does not exist in this market to any appreciable extent. When conditions may change is a question; no indications of it thus far. Still, the tendency of the market is downward, although it is not felt yet on any line except carnations, and then only in the colored stock, as the demand for white is in excess of the regular supply, and these are absorbed promptly, while the colors lag a little. Lilies are a trifle easier; other things as before.

The supply of flowers **CINCINNATI** is still limited in quantity, with a brisk demand for anything that is salable. Carnations are more plentiful than they were last week, but bulbous stock is welcome just now and is moving well at a fair price. Were it not for these periods of dark weather and scarcity of flowers, growers would have to discard bulbs altogether as unprofitable. The price is up on this class of goods now, and it is to be hoped that it will remain where the grower can at least break even. Store men must have stock to do business with, and the supply just now would be meagre indeed if there were no tulips, daffodils, etc., to help out. The man who forces bulbs in quantity needs all the encouragement and help you can give. It is not easy money, by any means, for the man who makes anything out of bulbs earns every cent of it. A few days of sunshine has brought in a better supply of lilies, but its effect on other stock is not noticeable.

We have just passed **COLUMBUS** through a rather peculiar week—customers and orders in plenty, but very little stock with which to satisfy the demands of even our regular trade, to say nothing of the transient customers. I need say little about the shortage of roses and carnations—as all are in the same boat. For a few days past, a little more sun has started things along, and if it keeps on normal conditions will soon again prevail. We look forward to a great Easter business, and there is no question but that we shall have it.

DETROIT Business is very satisfactory. Prices are good from the wholesalers' standpoint, and the retailers are too busy hunting up supply to consider the most reprehensible business trick the human brain has ever thought of, that is cutting of prices.

INDIANAPOLIS Business remains in a most satisfactory state. Spring flowers of all kinds are to be had in abundance and find ready sale. The principal scarcity continues in American Beauty roses, these being very poor. Carnations are up to requirements in quantity and quality. Some splendid tulips are being offered. The demand for violets is supplied wholly with eastern stock. Lilac sells well and is a staple with the best stores. Sweet peas are seen in greater abundance, the quality being much improved. The variety of blooming plants is large, the sales showing an increase. Well done azaleas are to be had in quantity. The local florists are making preparations for an unusually heavy call for stock of all kinds for St. Valentine's day.

NEW YORK The strain under which this market has been laboring ever since the holidays shows signs of relaxing and there are unmistakable evidences that the famine in roses and carnations has come practically to an end. Sunny skies and warmer temperature will soon bring us once more to the time of surpluses. Prices are on the downward track this week.

PHILADELPHIA Supplies are still on the short side, especially in roses, but there are liberal receipts in bulbous flowers which help out on the shortage. The Assembly Ball on Friday took a good deal of stock and there were many dinners and other social functions to use up flowers in a general way. Beauties were very scarce and are getting scarcer. Best stock is bringing a high figure and would bring more if decent quality was to be got. The short grades especially are under standard. No immediate improvement is looked for. Richmonds are very good and help out even better than Libertys. The supply to Brides and Bridesmaids has increased a little. The carnation mar-

ket is normal with Enchantress as the leader. There is a strong demand for a deep pink not so high priced as Lawson. The violet supply is usually curtailed in the wintry conditions now prevailing, but this season is an exception. Both single and double are plentiful. Miscellaneous stock is featureless except mignonette, which is a little draggy. More good Asparagus plumosa could be used with the accent on the "good."

CONDENSATION ON STORE WINDOWS.

A correspondent asks how to get rid of condensation on store windows. We referred the question to two leading florists who make reply as follows:

In reply to your inquiry as to our method of getting rid of condensation on our store window would say that we have tried various preparations but find the best is a porter with a rubber window scraper and some cloths. We have our windows enclosed and heated.

Yours very truly,
PENNOCK BROS.
Philadelphia, Pa.

In reference to your inquiry as to the best method of getting rid of condensation on store windows, beg to say that we have tried many, but the only satisfactory one to us is to throw on clear water and let it run off of its own accord. A glass treated in this wise will remain clear for sometime whereas if washed and wiped dry it will immediately begin to cloud again.

Very truly yours,
GUDE BROS. CO.
Washington, D. C.

"HORICUM"

TRADE MARK

San Jose Scale on a Pear.

Kills San Jose.

HAMMOND'S SLUG SHOT WORKS.

"HORICUM" A Scale Killer and Fungicide

A preparation for the destruction of the "SAN JOSE SCALE"; carefully prepared and put up in packages for general use.

"HORICUM" can be obtained from many of the Seedsmen in the United States. A description of the article is aptly told in the pamphlet. It is put up in quarts and gallons to 50 gallon barrels. It is the Lime, Sulphur, and Salt combination, concentrated.

ABOUT "HORICUM"

Glenside, Pa., March 31, 1906.

Hammond's Slug Shot Works, Fishkill-on-Hudson, N. Y.

Gentlemen: Seeing "Horicum" mentioned in Monthly Bulletin of Div. of Zoology, Penna., I would thank you to inform me where I can get a supply, say about a gallon, for trial. The San Jose Scale is very bad around this section and could no doubt push sale of the solution, especially as it is spoken of so highly in the above mentioned Bulletin.

Yours respectfully, H. J. HINDS.

P. S. Glenside is twelve miles from Philadelphia.

Send for Pamphlet on "Bugs and Blights" to B. Hammond, Fishkill-on-Hudson, N. Y.

WANTS, FOR SALE, ETC.

Stands the racket. Protect your plants with our

PLANT BED CLOTH

Mineralized Rubber Co.

18 Cliff Street, New York

The Standard Steam Trap

Certificate of merit awarded at Washington, D. C., Florists' Convention. For simplicity, durability and perfect satisfaction it has them all guessing. It is in a class by itself. To see it work a large plant as well as a small will convince the most sceptical that it is the Florists' Friend.

The Standard Ventilating Machine still leads as the most durable, easiest working and the all-around satisfactory machine.

The Duplex Gutter is gaining all the time, over 12,000 feet sold thus far this season. Catalogues free.

Just Think This Over

"the man on the outside often knows more about what's going wrong on the inside than the inside man does." Just for example, we run across many a house that we can see at a glance is costing more to run than it should—the inside man is so accustomed to the existing conditions that he long ago ceased to think them important. We trace these things out—that's our business and that's our reason for saying: if you want a house of economy—one that will be planned out to save you every dollar to be saved; then go to people who not only understand greenhouse building *but know greenhouse economies*. Write to H. & Co. for information.

... OUR ... CARNATION NOVELTIES — For 1907 —

Winsor, White Enchantress and Helen M. Gould

ONE way to judge carnations is to see them on the exhibition tables. A better and more convincing way is to see them growing; therefore we cordially invite all carnation growers to visit us and judge for themselves regarding the superiority of the above-named sorts.

Our carnation houses are at **Scarborough-on-Hudson**, (not Tarrytown). Friends who desire to visit us can take the N. Y. C. & H. R. R. R. from New York. Trains leave there every half hour. Scarborough is the first station north of Tarrytown. Our grounds adjoin the station, and the greenhouses are about five minutes' walk from the station.

We are growing **25,000 plants of Winsor** for cut flowers, alone, for the new York market this season, which shows the faith we have in it. This will also enable visitors to see it growing in quantity, and besides that, will give us enough plants to get a great abundance of fine, healthy cuttings without over-propagating. We have already booked a large quantity among the large growers, and anticipate for this variety the largest sale of any new carnation that has ever been distributed, as large growers who have seen it are enthusiastic in regard to its value. Those who have seen it have immediately placed large orders for it, so we recommend those who have not ordered to place order without delay, so as to insure early delivery.

For full description of these three valuable novelties, see our wholesale price list.

Wholesale Prices Rooted Cuttings Spring, 1907

WINSOR.—Soft silvery pink. The best color, best keeper, best shipper, best seller—best every way. \$12.00 per 100; \$100.00 per 1000.

WHITE ENCHANTRESS.—Has the large size, long stem, productive habit of Enchantress, but is pure white. \$12.00 per 100; \$100.00 per 1000.

HELEN M. GOULD.—A beautiful sport of Enchantress. Ground color lovely shade of silvery pink, with very fine pencilings of carmine, making an exceedingly exquisite combination. While on close observation this variety is variegated, the general effect is one beautiful tone of dark pink. Exceedingly valuable, because it combines the earliness, freedom, long stem and large size of Enchantress, giving another color possessing all the other desirable qualities of Enchantress. \$12 per 100; \$100 per 1000.

BEACON.—Orange-scarlet. A vigorous, healthy grower, of ideal habit. A profuse bloomer, with long stems. \$12.00 per 100; \$100.00 per 1000.

ARISTOCRAT.—Cerulean-pink. Will be planted largely in place of Lawson. \$12.00 per 100; \$100.00 per 1000.

MELODY.—Daybreak sport of Lawson, about the same color as Enchantress, but much brighter, and does not fade like Enchantress. Also a much better keeper and shipper. Those who grow the Lawson varieties exclusively will find this very valuable and desirable, because it gives an improved Enchantress color, which is so popular, and at the same

time can be grown in the same house with the other Lawsons. An extra fine thing in every way and in great demand. A great addition to the Lawson class. \$10.00 per 100; \$75.00 per 1000.

ROSE PINK ENCHANTRESS.—A sport of Enchantress. Color, dark rose pink. \$7.00 per 100; \$60.00 per 1000.

WHITE PERFECTION.—A novelty of 1906, and a variety for which there is a great demand this season. A third larger than Lady Bountiful and a more perfect flower. \$6.00 per 100; \$50.00 per 1000.

VICTORY.—Scarlet. This is giving great satisfaction, being a free blooming, profitable scarlet. \$6.00 per 100; \$50.00 per 1000.

RED LAWSON.—A fine red. Our stock of this is superior to many stocks of Red Lawson that we have seen. \$4.00 per 100; \$30.00 per 1000.

VARIEGATED LAWSON.—The most productive of the variegated sorts. A favorite. Outblossoms Mrs. M. A. Patten. \$4.00 per 100; \$30.00 per 1000.

WHITE LAWSON.—An excellent white. \$4.00 per 100; \$30.00 per 1000.

LADY BOUNTIFUL.—Pure white. \$4.00 per 100; \$30.00 per 1000.

ENCHANTRESS.—\$3.00 per 100; \$25.00 per 1000.

MRS. M. A. PATTEN.—\$3.00 per 100; \$25.00 per 1000.

MRS. THOS. W. LAWSON.—\$3.00 per 100; \$20.00 per 1000.

MABELLE

New Pink Carnation for 1907

Color—A peculiar shade of lovely pink, with a faint yellowish cast; several shades lighter than the Law on. Unlike most Pinks, the brightest sun does not injure the color. Size—3 to 4 inches in diameter when established. Odor—Pleasing, but not strong. Stems—Invariably strong, but always graceful, ranging from 12 to 30 inches during the season. Habit, etc.—A very quick, active grower, making specimen plants in a short time, even from late cuttings. On account of its rapid growth, requires supporting very soon after benching. Gets away rapidly, blooms early and gives long stems right from the start. Productiveness—P. odious is the best word we know of to use here. It is the most incessant bloomer early and late, we have ever grown. Stock limited. Delivery January 5th to 10th and later.

Price \$12.00 per 100, \$100.00 per 1000

THE H. WEBER & SONS CO., Oakland, Md.

DON'T Be Afraid To Invest In ROSE PINK ENCHANTRESS

It is both free and "fancy"—a sure money-maker.

Price \$7.00 per 100; \$60 per 1000

Delivery January and later. Write for Descriptive Circular.

Cypripedium Leeaunum Var. "Adela"

(C. INSIGNE x LEEANUM)

This cypripedium was raised at Wyndhurst Gardens, Lenox, Mass. Many good things are among the batch of fifty seedlings, but the above variety surpasses anything yet flowered. It is a most pleasing flower, a bold, strong grower, and a welcome addition to our collection.

Its description is as follows: Dorsal 3 inches wide, 2 1-2 inches deep, slightly crenulated on upper margin, two-thirds white with large purplish spots running well up into it, base yellowish green with large brown spots. Petals 2 3-4 inches long, 1 1-4 inches wide, slightly crenulated near base, yellowish green, veined reddish brown; central vein larger, reaching from base to apex; spotted at base. Pouch large, yellowish, diffused with reddish brown. Parentage: A selected yellowish variety of Insigne and Leeaunum Sander's var. A fine bold flower 5 1-2 inches diameter; a strong grower, larger than C. Leeaunum Clinkaberryanum.

Alfred J. Loveless.

Cypripedium glaucophyllum

Cypripedium glaucophyllum is of comparatively recent introduction, and in consequence is not so well known as it deserves. Few cypripediums have such a striking appearance. Though somewhat resembling C. Chamberlainianum, it is unique in form. The labellum, or pouch, is peculiar in shape and color, being nearly cylindrical and without the usual outward curve in the upper part. Its color is a light lavender, profusely spotted with minute dots of a darker lavender shade. The petals are rather short, very hairy at the margins, cream color, heavily blotched with purple. The dorsal sepal is dark green in the centre, with a white margin. The flowers are carried on a long peduncle, which generally bears a number of flowers, usually five or six, but only one at a time, resembling in this respect the South American species. The foliage is glaucous, leaves broad and short. Being a native of southeastern Asia, it requires a moist, warm treatment.

JAMES HUTCHINSON.

SPECIAL ROSE NUMBER
 WITH COLORED PLATE
 Will be Issued March 9

British Horticulture

NEW INTRODUCTIONS OF 1907.

From inquiries made among the leading firms I have been able to obtain some details of the novelties which will be disseminated this year. First, dealing with the carnation, Mr. A. F. Dutton, one of the leading carnation specialists, informs me that his chief novelty is his Improved White Lawson. He claims that this variety is quite distinct from the American sports; it has an improved Lawson habit, with a longer stem and greater perfume; the blooms are of large size and very free. This won the premier prize for 36 best whites at the show of the Winter Carnation Society in December last. This new-comer is to be sent out in March. Mr. Dutton has also White Perfection, a show variety of full size, the flowers being of perfect form. For scarlets, he pins his faith to Britannia, Robert Craig, and Victory. The best pink is undoubtedly Mrs. H. Burnett. This has been raised by H. Burnett, a Guernsey grower. The petals are broad, of good shape, whilst the calyx is excellent. The plant is an easy grower, and seems well suited for market work. The stems are strong and adapted for decoration. This has been certificated by the Winter Flowering Carnation Society, besides receiving an award of merit from the Royal Horticultural Society. Mr. Burnett has a fine, deep heliotrope carnation in Mikado, which is a seedling from Mrs. T. W. Lawson. Ceres is a new fancy, being of a primrose-yellow tint, flaked and splashed with pale salmon. Aurora has blooms of a pale yellow inclined to buff, flaked with bright pink. Cassandra, another seedling from Mrs. Lawson, is of a bright rose pink hue. Rosalind, a white ground fancy, marked with bright pink, and Miranda, white, mottled with pink.

BEGONIAS AND DAHLIAS.

Messrs. Blackmore and Langdon have a batch of new double begonias. These comprise Lady Irene Burgess, a pure white with frilled petals; Lady Muriel Coventry, blush-white, with large, smooth, wavy petals; Mrs. J. Booth, salmon blush, with blooms of a rose-like formation; Mrs. Cathcart, rose colored; Mrs. Sidney Humphries, a novel color, having a yellowish ground with a picotee margin of rose; Mme. A. Patti, soft orange salmon. The frilled single begonias sent out by the same firm will find favor with those growers who consider the smooth-edged varieties too stiff and formal. These are in many shades of color, the soft tints of blush pink and salmon being especially attractive. Peony-flowered dahlias are being made a specialty by Messrs. Hobbies. These have gained many honors at the leading shows. The newest addition is Nicholas II., of a pure white with bold blooms of a good style

and form. Messrs. Jas. Stredwick & Son have some useful new cactus varieties in their collection. Flag of Truce is a great advance on any of the whites previously produced by the firm. The best of the lot is undoubtedly Rev. Arthur Hall, which gained the silver medal offered for the best bunch in the professional class at the National Dahlia Society's show last year. The large sized blooms are composed of a number of long, narrow florets which gracefully intermingle. The color is ruby crimson relieved at the points of the petals by a lighter tinge of the reverse coloring. Messrs. Stredwick consider this their floral masterpiece.

MISCELLANEOUS.

In the flowering shrubs section, Messrs. J. Waterer & Sons of the American Nursery, Bagshot, Surrey, are to the fore with their famous rhododendrons. They have received awards from the Royal Horticultural Society for Gomer Waterer, a delightful blush bloom; Marchioness of Tweeddale, rose, yellow blotch; and Viscount Powerscourt, rosy crimson, black blotch. Among new ferns a prominent place must be given to the remarkable development of *Nephrolepis exaltata*. The various improvements made both in England and America have culminated in *N. todeoides*, whose graceful plummy form has been much admired at the Covent Garden flower market. This has been exhibited by Messrs. T. Rochford & Sons, and it has received an award from the Royal Horticultural Society. Two other new forms are *N. ex. elegantissima*, shown by W. J. Godfrey, and *N. ex. superba*, included in the collection of H. B. May. Another exhibit which was certificated was *Davallia canariensis elegans*, from the nurseries of Messrs J. Hill & Son. Messrs Jackman & Sons have a new clematis, Lady Northcliffe, which is of a rich purple-blue tint, and has been successfully exhibited. In the novelties offered by Messrs. Sutton & Sons is Ivory-white wallflower. The firm have been actively engaged in selecting and improving the variety during the past ten years, and it is likely to prove a very acceptable addition to the garden. Chrysanthemums and sweet peas have already been dealt with from the British standpoint in these pages, and roses are reserved for another letter.

W. J. H. Adsett.

Let Horticulture Work for You

If you have anything to sell to florists, gardeners, park superintendents, seedsmen, let this paper sell it for you. It reaches thousands of good buyers once a week and the cost is only a trifle. Tell your story in HORTICULTURE'S advertising columns, for it will get into good company and the best people in the profession will surely see it and read it.

Rooting Medium for Orchids

IN HORTICULTURE, Jan. 19th, Mr. Orpet revives the old question of the best medium for orchids and takes his usual side-shot at the advocates of leaf soil. Mr. Orpet has by his wonderful success in the cultivation of orchids, which he attributes in part to the use of brown osmunda fibre, converted many to his belief that osmunda fibre is the very best medium. Mr. Orpet, as a successful cultivator, is so well known that anything he says is generally accepted and although most of his advice is good I do not think he is quite fair in his remarks concerning leaf soil. An impartial view of the matter may not be out of place.

Few cultivators entirely agree upon the question of compost. Some succeed with fern fibre alone, others, and I may say, the great majority, use fern fibre and moss and many, Mr. Orpet notwithstanding, still favor leaf soil. For many species the safest and most durable rooting medium is good, soft, brown, osmunda fibre without moss. The physical properties of this material counterbalance its deficiency in plant food which can be supplied as needed, and by the liberal use of Cookson's formula at the right time large and healthy growths may be obtained.

For many species and especially *Odontoglossum crispum* and kindred species leaf soil, if properly handled is an excellent medium. Some splendid specimens have been grown in it and I may also add, many plants have died in it. Where special attention can be given to watering it is the very best but where such is not possible it is the very worst.

Root aeration is as necessary to all orchids as a pure atmosphere, and in a mass of material like leaf soil a complete change of air is only produced by driving out the air in the pot by a thorough watering and allowing the plants to become comparatively dry before watering again and as leaf soil dries very slowly it will be seen how easy it is to produce stagnation by too frequent watering. Larger growths will be made in leaf soil than in any other medium under the sun and providing enough light is given to mature what has been made larger flower spikes and increased vigor will be the result. The outcry against leaf soil was that many growths did not flower and those which did did not have the lasting qualities of flowers produced by the use of peat or fern fibre. This is entirely due to insufficient light to mature the growths. The use of leaf soil has become more general in England in spite of the outcry against it, but it is most frequently used in mixture with peat. The osmunda fibre does not lend itself to mixture so well as English peat as it is far more

CATTELEYA LABIATA
After two years in leaf soil.

easily demoralized by contact with moisture or decaying material.

In the December number of the *Orchid Review* an eminent orchidist describes a visit to an orchid establishment in the North of England and after describing the position, style and eccentric mode of ventilating the *odontoglossum* houses, which, according to orthodox ideas, should be enough to kill any *odontoglossum*, says that the medium used is a mixture of moss and leaf soil (the worst combination on earth) which is used without drainage; then he tells of the vigor and health of the plants concluding by giving dimensions which are almost incredible. I wish Mr. Orpet could see our *odontoglossums* which have been in pure leaf soil about sixteen months. The increased size of the pseudobulbs just finished and the vigor of the new growths, also the size of the numerous flower spikes would delight him I am sure. During the hot weather they showed no signs of distress; the roots were as healthy afterwards as they could possibly be in fern root. For *cattleyas* and *lælias* leaf soil is an excellent medium although for sickly plants I prefer osmunda fibre.

Cypripediums and *masdevallias* take kindly to leaf soil, but in a house where the shading is permanent they will not flower so well although when enough light can be given they flower better. *Cattleyas*, *lælias*, *masdevallias* and *odontoglossums* in leaf soil can stand more direct sunlight without harm than the same subjects in fern fibre.

James Hutchinson

Our Frontispiece

Our frontispiece shows a house of healthy specimens in bloom of *Cattleya Mossiae*, *Cattleya Mendelii*, *Dendrobium thyrsiflorum*, *Miltonia vexillaria* and *Lælia purpurata*. John Nilan, the grower, is a frequent contributor and prize winner at the exhibitions of the Massachusetts Horticultural Society.

The Deciduous Calanthes

HOW THEY ARE GROWN IN THE GREENHOUSES OF
G. M. WHITIN, WHITINSVILLE, MASS.

As the flower spikes are cut the pots are placed beneath the bench where it is light and dry but where there are no hot water pipes and the temperature runs about 60 degrees and they are kept here until the growth starts. The bulbs are then shaken out of the soil, the roots cut off close to the bulbs, the bulbs set in shallow boxes partly filled with sand and the boxes set on the benches well up to the glass, the glass having been first lightly shaded. The boxes of sand are kept always moist. The roots soon start, and when these are about an inch long the plants are potted in their flowering pots.

The potting material is rotted sod with the fine soil sifted out; a little spent cow manure or leaf soil is added, with a little sand and bone meal which has been damped for two weeks or more well mixed in. I fill the pots about two-thirds with crocks, filling with compost up close to the rim, being sure to make it firm, then making a depression to set the bulb in, being careful not to injure the roots but pressing the soil firm around the bulbs and using a small stake to steady them until they take root, after which the tie is cut and the stake taken away.

When the bulbs are potted they are watered; then they are looked over every morning and if any plant seems dry it is watered and every bright morning the plants are syringed until they commence to flower, when the syringing is stopped, but the watering is kept up as long as the foliage is green. When the young bulbs commence to swell we give them liquid manure until part of the flowers are open.

When the weather becomes warm we put up a cloth shading on rollers, which is let down when the sun is bright until about October first, when the shading on the glass answers.

To have good bulbs we must have good foliage; good bulbs mean strong spikes and good flowers. In making the manure water we use hen manure, bone meal, soot and sheep manure in equal parts.

Calanthes like a warm house to grow in; they do best at 70 degrees at night, but we cannot keep it so warm in spring and fall; 60 at night in the spring is all we can do, but in summer we run it up to 70. Taking the solid bottom out of the bench and putting in a slat bottom so the heat from the pipes comes direct on the plants helps greatly when the house is cool.

Calanthe Veitchii or Veitchii superba, if it can be gotten, and vestita luteo-oculata, are the two best to begin with; grow them one bulb to a pot, using 4, 5 or 6-inch pots, according to the size of the bulbs.

Roses Under Glass

II.

Careful selection of wood is a very important factor in successful propagation, the most experienced men usually being delegated to this task. As the future constitution of the plant depends largely upon the character of the wood selected, it is essential that in order to maintain a continuous growth of healthy, vigorous stock, we take only the most suitable wood, passing by all weak and sprawly stems, rejecting that which shows signs of reduced vitality, and cutting wood which is in a half-ripened condition from the healthy, strong growing plants.

Considerable difference of opinion prevails as to whether "blind" wood, or flowering stems make the best cuttings; some favor the flowering stems, others are just as strongly in favor of good blind wood, claiming that the after treatment of the cutting is of greater importance. We must also take into consideration the expense attending propagating from flowering stems. Few growers would care to denude their plants of buds when, by reason of the dark, short days which prevail at this season, roses are scarce and command good prices.

The cutting table should never be piled up with wood; it is far safer to take off a small quantity at a time and keep it well moistened during the process of making it into cuttings.

CUTTINGS.

Opinions regarding the style of cuttings are almost as numerous as are the growers, some consistently advocating one eye, while others as earnestly advise two and three eyes. For Beauty, Richmond, and varieties from which bottom canes are desirable, the three-eyed cutting seems to be most generally used. Some growers condemn this practice, but others who have tried it with success are content to stand by it.

In making the cutting use a sharp knife and cut clean and short; not a long slicing cut, but one almost straight across, as the smaller the wound the quicker will be the healing process and more uniform the arrangement of the young roots. The cuttings should not be allowed to remain long on the table in an exposed condition, but as soon as possible after being made should be placed in the sand. To perform this operation a rather thick bladed knife is necessary; with this draw a line straight across the sand, making the cut about two inches in depth; this brings the base of the cutting about midway between the surface and the bottom of the sand, thus securing a uniform amount of heat and moisture where these essentials are least liable to fluctuation.

The cuttings should then be put in about an inch apart, taking care that each cutting reaches the bottom of the cut; press the sand down firmly around them and proceed with other lines, leaving a space of two or two and a half inches between each row. Beauties, on account of their heavy foliage, require more room. Water them thoroughly and shade carefully. Shading is not meant to exclude the light, but to protect the cuttings from the direct rays of the sun, and should be removed as soon as the sun ceases to shine on the bench.

A good way to arrange the shade cloth is to loop it on to a wire stretched full length of bench and fastened to the sash bars, posts, or whatever is most convenient, allowing it to hang down so that the lower edge of cloth

is about even with or a little below the top of the bench. Many growers attach the lower edge of the cloth to a second wire, which is fastened to the bench; this prevents the cloth from blowing onto the cuttings on windy days. During bright weather spray the cuttings two or three times each day, as the moisture on the foliage is a great factor in helping to produce a good and uniform strike.

The temperature of the sand should be about 60 to 62 degrees, with a house temperature of 50 to 52 degrees. This low temperature of the house is necessary to keep the buds from starting and making wood while root formation is in progress. Some growers use a higher temperature both in the sand and in the house in order to work off the batch in shorter time, but the time thus gained is lost when the young stock is potted; the cooler handled stock goes to work at once and soon makes up for lost time, both in size of plant, quality of foliage and general constitution.

A careful examination of the sand every morning before watering is absolutely necessary, as the cuttings are very sensitive to over-watering and seldom survive a drying out. Given proper attention it is reasonable to assume that the cuttings will be ready to lift and pot in from twenty-eight to thirty days.

John S. Johnston

Children's Gardens and the Trade

The Children's Garden movement is today beyond the experimental stage. Since its beginning it has been slow, up hill work and required energetic, enthusiastic, hard working believers to keep it alive. Why has this been so, why have not the trade done more to help along this most important movement? Surely the gardening trade will benefit more as the result of children's gardens, both school and home, than anyone else. It is to them a straight business proposition.

We have today a general movement toward home gardening, and though brought on through the press the school gardens have taken no little part in bringing gardening home to the parents. The trade has already felt this movement, more seeds, more bulbs, more plants and more flowers are sold today than ever before, but very few people know how to spend money on their garden, and why, because they have never had anyone to tell them how or teach them what gardening really means. At the convention of American Florists, held last summer, the address by Mr. Hallock on teaching horticulture in public schools is the first important step that the trade has taken in the matter of children's gardens. It seems deplorable to the writer that this step, which is of such vital importance to them, has been so long in coming. Let it be but the beginning of a new force. Let every florist, seedsman and gardener help the school and home gardening movement throughout the country.

Today we have the backing of eminent and able educators who say that school gardening is the best form of industrial education and that it has advantages which cannot be obtained in any other study in a school curriculum. We have the children with us in the work, they are enthusiastic, energetic and love it. It makes no difference whether they are good boys or bad boys, sissies or toughs, to put it in common language, they

love it equally well, possibly giving the toughs the first place. From a civic point of view children's gardens are going to mean more than anything else to the future welfare of our country. From the trade's point of view it means more goods sold and a demand for higher quality. Your customers will know what they want and go where they can get it. There are some gardeners and florists who have woke up to the value of this movement. They are pioneers and should receive all credit due them for their good sense and generosity.

What can the trade do? First, it can help financially, not so much the mere giving of material as seeds, bulbs, plants, etc., as in helping to procure land, manure, labor and brains to put this land into proper condition and to plan the work. Here come in technical points which can be answered and which the public find difficult; they are always puzzled as to what preparation should be given to the soil and how to begin work, what to plant, how to plant them and hundreds of points which the professional can easily answer. Another expense in school gardening work is tools. These can be supplied at cost and practical points given as to what to select. They must be real tools, not play things, though light and durable. Children like to buy their own seeds, and as they get full benefit of the crop let them furnish out of their own money the cost of the seeds, whether they select them themselves or not. So many tradesmen have thought that all it was necessary for them was to give a lot of seeds or plants, but that is not all that is wanted; it is advice and enthusiasm as well.

The greatest expense in all children's garden work today is in a director, who must know how to garden and how to handle children. He is of vital importance to the success of the movement. Youngsters require a leader. It is not enough to give them a piece of ground, some tools and seeds and tell them to go ahead, they want someone to show them how in the first years and they want someone who is interested in their results. Often a director can be found who under some expert can readily manage a successful garden.

Horticultural societies, florists' societies, village improvement societies, etc., should plan exhibitions of children's garden products, and the leaders in these movements should be local florists, gardeners, nurserymen and seedsmen.

When the trade does wake up to the value, not only the aesthetic but the actual cash value of school gardens, they will realize that to take active part in it is worth both time and money to them. They can have no better advertisement if they do it right and they will get up a strong sentiment among the children which will mean a safe, sure and permanent investment for future business.

The Massachusetts Horticultural Society is doing much along the line of school garden work. Their committee is in close touch with this movement throughout the country and their work is increasing rapidly. Let other societies take up the work, and let the trade join in and help those who have fought so hard and with so little encouragement to put the movement where it belongs. It is a good business proposition and a great thing for the children.

Henry Dutton Adams.

COLORED SUPPLEMENT WITH THIS ISSUE—Oriental Poppy Mrs. Perry.

Help the
school gardens

We hope that every one to whom this paper comes will read carefully the interesting and convincing article concerning the relations of children's gardens to the horticultural trades, from the pen of Henry Saxton Adams, which appears on another page. Mr. Adams has been one of the hard working, enthusiastic, and unselfish leaders in the long uphill struggle on behalf of this patriotic work which is now just beginning to get recognition. The appeal should meet with an appreciative, enthusiastic response from every horticultural organization in the land.

Tightening
the ties

The sentiment most strongly brought out in the discussion in the Gardeners' and Florists' Club of Boston in regard to the proposed laws regulating the use of steam boilers is that of mutual responsibility and the recognition of the principle that the troubles of one should be the concern of all. We do not think that this sentiment has been fostered to the extent it should be by the florists' organizations, membership in which is not infrequently more in the nature of an "armed truce" than an efficient fraternal reality. But we see indications of the growth of a more sensible feeling, gradual but steady, and much promise for future advantage to all because of it.

The
rise of the orchid
as a commercial flower

Nothing in the history of the flower trade for the last two or three years is more noticeable or suggestive than the onward progress of the orchid as a commercial flower. From an uncertain, intermittent demand, the orchid industry has now developed into regular and stable lines, the call for the blooms coming from widely separated localities and furnishing conclusive evidence of the place in the public estimation to which the regal cattleyas, lœlias, phalænopses, dendrobiums, vandas, cœlogynes, oncidiums and other gems of the orchid world have already attained. Among the leading and progressive florists the orchid has by general consent, been accepted as an indispensable factor in their decorative work and a standard item in their daily stock. Thus, at last, comes the reward to the enterprising, far-sighted collectors and specialists who have, year after year, kept this choicest of all flowers constantly before the public by means of the exhibitions throughout the country and have with remarkable tenacity of purpose and at enormous expense done more than all other instrumentalities to place the orchid in the position which it merits. It will be a long long time before their star will wane or their pre-eminence suffer from the rivalry of any other class of material.

The Greek
in the New York
flower trade

A movement among the Greek florists of New York to organize a local association or club for alleged social and benevolent purposes seems to have been the basis of a rumor that the Greeks contemplated a union for the purpose of affecting to their particular advantage the wholesale flower and plant markets. The Greeks deny that they have any such intention. They call attention to the fact that people of other races have organizations for mutual advantage and justify their present movement on these grounds. Their stand seems a reasonable one. We can see no benefit, but on the contrary a considerable injury, that may come to the flower trade through the stirring up of an antagonistic feeling between the Greeks and the rest of the flower trade of the metropolis. The Greek element is here to stay, undoubtedly, and while it is true that their main reliance is the cheap street trade yet there are those among them who have aspired and attained to something better. Their indispensability to the trade, in the distribution of the enormous product coming daily to the city, is well understood by the wholesale flower trade but we do not doubt the latter's ability to take care of its own interests, and we apprehend no serious results from the proposed organization of the Greek fraternity but we do see possibilities of harm in any hasty talk tending to instigate discord and incite factional feeling.

NEWS OF THE CLUBS AND SOCIETIES

NEW YORK FLORISTS' CLUB.

Some as yet unexplained mishap in Uncle Sam's mail service prevented our giving our usual prompt account of the monthly meeting of the New York Florists' Club last week. It was a good meeting, many matters of general interest being disposed of and some interesting talks being given by members. Among the latter were Messrs. Guttman, Young, Traendly, Butterfield and Shaw, who told of their enjoyment of the Toronto meeting of the American Carnation Society, and inspired a vote of thanks to the Toronto people for their many courtesies extended to the New York visitors, also Messrs. O'Mara and Birnie and President Totty, who expressed views regarding the advisability and practicability of greenhouse inspection of carnations in addition to the usual exhibition inspection of blooms in deciding upon their commercial worth, the consensus of opinion being that the carnation society should have adopted some such system as is practised by the New York Florists' Club in the case of candidates for certificates.

There was a good exhibition of carnations on the tables, including Georgia and Harvard from J. D. Cockcroft, Toreador and Mabelle from H. Weber & Sons, Winsor from F. R. Pierson Co., Welcome from Dailledouze Bros., Imperial and Pink Imperial from John E. Haines, a seedling from E. L. Enggren and Winsome and No. 32 from John Reimels. A certificate was recommended for Welcome by the award committee and preliminary certificates were given to Harvard, Toreador and Reimels' No. 32. A. C. Zvolanek showed a fine collection of new sweet peas, which were given a cultural certificate. F. Boulon showed Princess of Wales violets.

COLUMBUS FLORISTS' CLUB.

The regular first meeting for the month was held on the 12th. President Stephens was in the chair, and Secretary McKellar also present. The attendance was good. The important matter of how to induce the many members of our club who are behind with their dues to pay the same came up for a full discussion. After a careful consideration of this matter it was voted, that after proper and fair notice by our secretary, the names of those in arrears be dropped from the membership list. Our club will, as in previous years, put up and distribute to the pupils of the public schools the penny packets of flower and vegetable seeds; and M. B. Faxon was given charge of the matter. This movement, although in its infancy here, has and is accomplishing most splendid results. Vice-President Currie exhibited a very perfect specimen *Selaginella caesia arborea*, for which the flower committee awarded him 15 points. The subject of an elaborate chrysanthemum show for the coming autumn received attention, and all present were very enthusiastic regarding the matter. Andrew Blum, who is with the Clover Hill Greenhouses, was elected an active member.

GARDENERS' AND FLORISTS' CLUB OF BOSTON.

The monthly meeting of this club on the evening of February 19, was a very large and enthusiastic one. The great all-absorbing business of the evening was the discussion of the proposed steam boiler inspection law now before a committee of the State legislature. Previous to the meeting a preliminary session of the executive committee and interested growers was held and they reported to the club a recommendation for the appointment of a committee to appear at the State House in opposition to the bill and an appropriation of \$100 for the securing of legal assistance. A spirited debate followed the presentation of this resolution, in which many of the leading local growers participated. The matter was finally adjusted by the unanimous adoption of a vote recording the club's sentiments in opposition to the proposed legislation and providing that as many members as possible, under the leadership of F. E. Palmer as spokesman should be present at the special hearing on Thursday.

C. W. Ross was to read a paper on road construction but being unavoidably absent sent the paper and it was read by J. H. Morton. It was an admirable production showing the evidence of careful preparation by a man well-qualified by experience and ability. He called attention to the neglect of or unwise methods in the care of country roads in this country as compared with those found in England and other European countries. He asserted that the superiority of the roads in Europe is due to the perfect systems of repair and constant well-directed care. He treated of the comparative desirability of the various systems of paving, describing each in detail and quoted cost of construction, paving, etc., for various widths and grades with each method and extolled the system of State road building in smaller communities as now carried on in Massachusetts. The paper is to be printed and a copy furnished to each member of the club.

The exhibition comprised a splendid plant of *Primula Kewensis* from the greenhouses of Gen. Weld, Boston violets and sweet peas from Wm. Sim, a collection of cecyogynes from W. N. Craig in which were *C. cristata*, *Lemoniana*, *C. n. alba* and *Chatsworth* variety, also the following *Cattleya Trianae* forms: *Leeana*, *Empress of India*, *alba* and *Backhousiana*. Other exhibits were carnations from S. J. Goddard, H. A. Stevens Co., who had a handsome light-pink seedling, Mrs. J. P. Snow with a scarlet sport from Harlowarden and a group of *Begonia Erfordii* of a very fine type from Thos. H. Westwood.

AMERICAN CARNATION SOCIETY.

Carnation Registered.

By Wa-no-ka Greenhouses, Barneveld, N. Y.—Climax, a decided improvement over Enchantress, being a shade or two deeper, of better form, stem and calyx and more productive.

ALBERT M. HERR,

Lancaster, Pa.

ST. LOUIS FLORISTS' CLUB.

The St. Louis Florists' Club's carnation meeting on last Thursday afternoon was a grand success both in attendance and exhibits. Long before the meeting opened the hall was crowded with growers, retailers and wholesalers to view the exhibition. The exhibitors were as follows:

Chicago Carnation Co., Aristocrat; F. R. Pierson Co., Winsor; H. Weber & Sons Co., Mabelle; Bauer and Smith, May, a fine light pink; John E. Haines, Imperial, John E. Haines and Pink Improved; A. C. Brown, a fine show of new seedlings. These were all staged for exhibition only.

The awards in the competitive displays were as follows:

25 red—first, Wm. Winter, with Cardinal; second, John Steidel, Cardinal; third, A. Jablonsky, Robert Craig.

25 light pink—first, Oakland Floral Co.; second, A. Jablonsky; both Enchantress.

25 rose-pink—first, J. Steidel; second, A. Jablonsky; both Rose-pink Enchantress.

25 dark pink—first, Oakland Floral Co., Lawson; second, A. Jablonsky, Aristocrat.

25 white—first, A. Jablonsky, White Perfection; second, Wm. Winter, Lady Bountiful.

25 variegated—first, A. Jablonsky; second, J. Steidel; both Mrs. Patten.

Aristocrat, from Chicago Carnation Co., scored 90 points; Winsor, from F. R. Pierson Co., 86; Mabelle, from Weber, 74; May, from Bauer & Smith, 80; Gov. Deneen, from A. C. Brown, 65.

The flower show committee in its report advised the members to drop the holding of a show for this year, and it was so voted. It was voted to subscribe \$100 to the proposed S. A. F. National Flower Show to be held in the fall of 1908 at Chicago. J. F. Ammann of Edwardsville, Ills., president of the Illinois State Florists' Association, was present and invited the members to attend the society's second annual meeting Feb. 19-20, 1907, at Bloomington, Ills., and quite a delegation promised to attend. Luther Armstrong, one of the charter members of the club and its first secretary, was called upon by the president for a talk, and told the members how in June, 1887, a few florists organized this club, which has now grown to its present size. Mr. A. C. Brown of Springfield and Dr. A. S. Halstedt of Belleville also made some well-pointed remarks. A few good discussions were brought out from the question box. This ended the meeting and everybody went home much elated of the pleasant meeting of friends in the trade.

NASSAU COUNTY HORTICULTURAL SOCIETY.

About thirty members were present at the meeting on February 13, in Glen Cove, N. Y. Valentine Cleaves received the prize for 12 carnations arranged for effect; a cultural certificate went to Felix Mense for violets. Among the exhibits were fine carnations by C. F. Bertanzel of Roslyn and a handsome palm by Thomas Harrison. A committee was appointed to arrange for the fall exhibition.

CHICAGO FLORISTS' CLUB.

The Chicago Florists' Club enjoyed a gala day on Thursday last on the occasion of the annual carnation exhibition which has for a series of years proved to be one of the most interesting events in the annual proceedings of the organization and which on the recent occasion proved even more successful than ever before.

Handel Hall where the club meetings are held was half filled with exhibits from the houses of local growers and numerous novelties forwarded from distant points. The attendance was large and the monthly meeting of the club was of unusual interest.

W. N. Rudd, F. F. Benthey and Jas. G. Hancock served as the committee on examination of exhibits and made a report commenting on the individual products and the scaling of all novelties, a certificate being awarded to varieties scoring 85 points or more.

Among the new varieties tabled were Bassett & Washburn's seedling No. 20, a scarlet product of Crane x Prosperity a flower of undoubted merit, to be put out next year. Scaled 87 points. Certificate.

Baur & Smith showed a delicate pink variety, pleasing shade which though not in the fancy class may prove a good commercial variety. Scaled 78 points.

R. Witterstaetter's new white Snowdrift which scored 84 points is in the absolutely pure white class and possesses many qualities which will doubtless bring it into prominence.

M. A. Ryerson exhibited a red sport of Lawson which the committee classed as apparently identical with Red Lawson.

Among the Chicago Carnation exhibit was a vase of Red Riding Hood, which scored 82 points.

John E. Haines of Bethlehem, Pa., shipped on vases of Imperial, and its offspring Pink Imperial which showed up well, scoring 79 and 84 respectively.

H. Weber & Sons Co., of Oakland, Md., showed Mabelle and Toreador which appear to have qualities making them valuable additions to the present list and which were given by the judges 79 and 85 points respectively, the latter being entitled to a certificate and will be put out next year.

Much attention was drawn to W. N. Rudd's vase of seedling No. 163, '02 a scarlet of unusual merit which showed many points which will doubtless prove this variety to be a winner.

One of the main features of the show was the handsome vase of Winsor tabled by Jensen & Dekema and shipped by F. R. Pierson on the Monday preceding. This flower scaled 88 points, the highest of the novelties presented, and created much interest.

The other exhibitors who showed flowers of a very high order were all local growers, and their exhibits were made up largely of commercial or standard varieties as follows, with the committee's remarks appended: Jensen & Dekema: "Fine exhibit of standard varieties"; Peter Reinberg: "Excellent exhibit of standard varieties"; J. A. Budlong: "A number of vases of standard varieties excellently done"; Chicago Carnation Co.: "A number of good vases of standard varieties and Red Riding Hood, also very fine vases of Aristocrat and White Perfection"; A. Then: "A number of good vases of standard varieties"; Poehlmann Bros.

Company: "An excellent exhibit of standard varieties, a vase of White Lawson especially commended." President H. N. Bruns placed on the table a bunch of his noted lily of the valley.

The meeting which followed the exhibition was largely attended and was of unusual interest. Several new members were admitted and a number present offered remarks generally applicable to the subject of carnations, among the speakers being W. N. Rudd, Aug. Poehlmann, J. A. Valentine of Denver, Will Kennedy of Milwaukee, P. J. Hauswirth, P. J. Foley and several others. The next meeting will occur on March 14th, the subject being the timely one, "Easter Plants."

NORTH SHORE HORTICULTURAL SOCIETY.

The sixth annual banquet and entertainment of this society took place in the Town Hall, Manchester, on February 15th. In the absence of President McGregor, Vice-President Thomas Jack presided. About 150 members and friends were present. The gentler sex was well represented. Among the visitors from Boston and vicinity were J. A. Pettigrew, J. W. Duncan, T. H. Westwood, president of the Gardeners' and Florists' Club of Boston; J. K. M. L. Farquhar, Maurice Fuld, J. P. A. Guérineau, F. A. Rein, Julius Huerlein, Mr. Benwell and Daniel Iliffe.

The entertainment was in charge of the Forrest Concert Co. of Boston, and a very fine program was rendered, after which dancing was indulged in.

In the eight years of its existence the society has grown from half-a-dozen members to 188; a good record and going one better each year.

WILLIAM TILL.

MORRIS CO. (N. Y.) GARDENERS' AND FLORISTS' SOCIETY.

The February meeting of this society was given in great part to discussing plans for the future and trying for new ideas on an old subject, about twenty-eight members taking active part. March 13th is to be carnation night. We are promised quite some novelties, but we want a whole lot of them. We are to have many competitive exhibits of standard varieties. Carnation night last year almost made us famous. We are to have three short papers, by Wm. Duckham, on "Planting in from pots, versus from open ground"; R. M. Schultz, "The commercial aspect of the carnation, best varieties, etc.," and Percy Herbert on "Methods of propagation." Each paper will be followed by a general discussion by the members.

E. REAGAN.

SCHEDULES FOR THE GREAT ROSE SHOW.

In the schedule of the American Rose Society, Class F, 168, "A group of decorative plants, covering at least 100 square feet of floor space, a prize of \$25.00 by W. H. Ernest, Washington, D. C." should have appeared in the schedule of the Florists' Club of Washington, D. C. The combined schedule of the prizes offered by the two societies can be had on application to Charles McCauley, secretary, 18th and Kearney streets, N. E., Washington, D. C.

NEW ENGLAND DAHLIA SOCIETY.

The secretary of the New England Dahlia Society reports that the membership is constantly increasing and that the executive committee has decided to issue a monthly bulletin beginning with March, which shall be called the Dahlia News. It will contain each month at least one article by some renowned grower of dahlias on their cultivation or their peculiarities. It will also contain the dahlia news of the world, inform the members what is going on, give description of the new varieties that are introduced, and in general supply the information that the dahlia growers are looking for.

The last page of the proposed paper will be given up to advertising, and returns for same, it is expected, will pay for the cost of publishing the paper. We feel that the society will outlive in membership any of the others of same nature in this country or Europe, as we expect a membership of fully 1,000 by the end of the year. We have now members residing in every State in the Union, and the interest given to the dahlia at large is surprising.

The secretary of the New England Dahlia Society would appreciate very much if the secretaries of the different horticultural societies would inform him of the date of their shows in which dahlias are included, so the members may be informed and exhibit wherever and whenever possible.

All growers of dahlias should join the society at once in order to get the benefit which a membership will give.

Respectfully yours,
MAURICE FULD, Sec'y.

CLUB AND SOCIETY NOTES.

At the annual meeting of the Wisconsin Horticultural Society at Madison on February 5 officers were elected as follows: President, R. J. Coe, Ft. Atkinson; vice-president, W. H. Hanchett, Sparta; secretary, to be appointed.

The Alabama State Horticultural Association at its annual meeting on February 6-8 re-elected W. F. Heikes of Huntsville for president and Prof. R. S. Mackintosh for secretary. The next annual meeting will be held in Birmingham.

The program of the Illinois State Florists' Association, whose meeting is scheduled for the 19th and 20th, in Bloomington, presents attractive topics by notable speakers. The local florists' club entertain the visitors on the evening of the 19th.

The Huntington Horticultural and Agricultural Society will hold its annual carnation exhibition in the Trade School building, Huntington, N. Y., on the evening of February 26. Exhibits should be addressed to Walter Shaw at the Trade School building.

One of the Chicago florist papers remarks that "Crimson Rambler is not a suitable rose for outdoors." "The leaves take on an unattractive green" and "the flowers are poor in color!"

AMERICAN CARNATIONS IN ENGLAND.

Papers Read Before the American Carnation Society at Toronto.

AUTHOR, C. ENGELMANN.

Winter flowering carnations were grown for the English markets already some thirty years ago. The first were French varieties, and as the demand for choice flowers increased, new kinds were raised, some of which enjoyed great popularity for a number of years, and, though in size and length of stems, they could not be compared with the present day carnation, in color, fragrance and productiveness, they left little to be desired.

The first carnations of American origin were introduced into England about fifteen years ago, and as I am told by one of the first importers, turned out to be rather a disappointment. Of later varieties Daybreak was already grown in considerable quantity. However, it was not until the Lawson made its appearance that the boom began. Even then there were but few growers who understood the cultivation of the "divine flower," and I am afraid Mr. Fisher would not have recognized his own child had he seen it in some of the English greenhouses. There were a few though that did the trick, and their produce made handsome prices in Covent Garden market. This, of course, was the best means of popularizing the flower, for the English florist is as much after the L. S. D. as his American cousin is after the dollar. There was money in growing carnations and consequently it was taken up by many new firms. Every new variety that was boomed in America was eagerly imported, grown and very often thrown away the first year, as many were quite unsuitable for the English climate.

Then came the glorious Enchantress and with it the germs of the new disease, called the "carnation fever," which attacks flower-growers and flower-lovers. The germ has not been discovered yet, but it is there right enough, I have no doubt, and it spreads fast, too, and makes the disease very catching. I caught it a few years ago, and am not likely to get rid of it again, for it seems incurable. It is a comfort that it is a painless disease, at least as long as the market-prices for the carnation blooms are good. However this may be, there is no doubt that Enchantress has helped to popularize the American carnation more than any other six varieties taken together. If there is a new variety being introduced the first question generally is: "Is it as good as Enchantress?" But, alas! I am sorry to say those that have come since have not been as good. But perhaps I should not say: I am sorry; rather: I am glad they have not been as good, for I think it is really a blessing in disguise that nothing up to the present in other colors has come up to Enchantress, as it shows the hybridiser a goal—well worth obtaining—plainly before him, and it is certainly easier to work towards something that we can clearly see before us, than to try reaching an ideal that only exists in our imagination. However, I am afraid I am getting off my track, which you will kindly excuse, for it is one of the symptoms of the "carnation fever;" if you start one of them that got the complaint going on this kind of subject,

New Orchid-Flowered Sweet Peas

These are a distinct "break" in Sweet Peas, differing from the standard sorts by the extraordinary size of their flowers, usually measuring 2 inches across, and by the standards being crinkled and wavy, while the wings are large and spreading. Another splendid feature is that a very large percentage bear four blossoms to the stem, which are long and strong. To sum up, they possess every characteristic that can be desired in Sweet Peas, and will undoubtedly supersede standard sorts of same color as soon as they become more plentiful.

Countess Spencer. A lovely clear pink, shading darker at the edges. 10c per oz., 25c per ¼ lb.

E. J. Castle. Rich carmine-rose, shaded with salmon, very striking, especially under artificial light. 17c per pkt., 5 pkts., 75c.

Frank Dolby. The largest and finest pale lavender-blue. 17c per pkt., 5 pkts., 75c.

Gladys Unwin. Charming shade of pale rose-pink; extra long stems and very valuable for cutting. 10c per oz., 25c per ¼ lb.

Helen Lewis. (Orange Countess) Brilliant orange-rose. 25c per oz.

Helen Pierce. This is the new gloriole-flowered Sweet Pea, being marbled blue on a white ground, with the veins showing a little deeper exactly like a mottled Gloxinia. 15c per oz., 50c per ¼ lb.

John Ingman. Rich salmon-rose. 15c per oz., 50c per ¼ lb.

Mrs. Alfred Watkins. A superb pale pink similar in shade to the old Princess Beatrice. 17c per pkt., 5 pkts., 75c.

Nora Unwin. The finest white now in existence. 17c per pkt., 5 pkts., 75c.

Phyllis Unwin. A veritable giant among Sweet Peas; color a deep rose-carmine. 15c per oz., 50c per ¼ lb.

Henry A. Dreer

714 Chestnut Street
PHILADELPHIA - - PA.

it will take a mighty effort to stop him.

The American carnation stands in England today something like this: There are, I should say, about one million plants grown for the production of cut-flowers alone. Ninety per cent. of these at least are cultivated in pots. Of the remaining, two-thirds are planted on raised benches and one-third on solid beds. The latter two methods are gaining in favor, and in ten years' time I should not be surprised to see the state of things reversed. Besides these, there are a large quantity grown in private establishments, and hardly any of the up-to-date estates are now without their special carnation house. The number of the American kinds grown in this way I should estimate at 100,000 to 200,000. Ninety-five per cent. at least are grown in pots. This number is constantly increasing, and there is no doubt that the modern winter-flowering carnation is beginning a fight for supremacy with the chrysanthemum, which has hitherto been the unsailed queen of the autumn and winter. I calculate that in five years' time there will be at least three times the quantity grown in England.

The continent of Europe is a little behind England as regards the popularity of the American carnation. However, the "fever-germ" has crossed the channel and the North Sea and the "carnation fever" has caught on. In Germany, a very limited number of growers have cultivated the American kinds for a few years, and managed to keep the names secret for a time. This game does not do for a long time in the twentieth century. There are too many trade papers about, and if there is money in a thing it will come out. This is as it should be; then after all that is said and done the

policy of the open door is the only progressive one and beats the surrounding of places with a Chinese wall always in the end. Now that the secret is out the German trade is all the more eager to obtain the wonders from across the Atlantic, and consequently a good trade is being done with young plants.

This is not only the case in Germany, but also in France, Belgium, Russia, Denmark, Austria; in short, all the countries on the continent of Europe are going in for the American carnations, and I don't think I am over estimating it if I say that within five years there will be fifty times more American carnations grown than there are today. I know of one German grower who only about two years ago purchased some twenty-five hundred dollars' worth of carnation stock from the South of France, and after giving the American varieties a trial this season intends to discard all his French varieties and grow the American ones in their place.

Even beyond Europe the fame of the "divine flower" has spread, for, only a month or so ago, I sent a fairly large consignment of young plants to Egypt, which arrived well, and, I hope, will do well. That they are going ahead in Australia is well known. About Asia I cannot say anything, as I have sent no further than the Crimea that way. Anyhow, in four continents out of five, the American carnation is known and grown, and the rapidity with which it has found its way is nothing less than phenomenal. This may partly be due to "booming," but vastly more because of its sterling value.

All this is well and good, but two great dangers are looming ahead. One: How long will it go on before the supply is in excess of the demand?

VICTORY HAS MADE GOOD

CUTTMAN & WEBER
The Wholesale Florist
of New York
43 W. 28 St.,
Lynbrook, L. I., N. Y.

The other and greater: How soon shall we be swamped with innumerable quantities of novelties, which, according to the raiser, will all be better than Enchantress, but which in reality will only be useless rubbish, that must disgust the straight and honest florist and damage the trade for those few new varieties that are really good?

To discuss how the American carnation as seen in England compares with its brother in the states, or how English methods of growing are inferior or otherwise to the American, would lead too far. However, one thing I may be allowed to mention by way of apology. If some of you should ever visit one of our English carnation shows in mid-winter, and find the blooms inferior or perhaps poor in comparison to your perfect specimen, please remember that the chief factor in producing first-class blooms in winter, is the light, and then take into consideration that on the 21st of December the sun rises in London (or rather is supposed to rise) at 8.05 and sets at 3.51. This is according to the almanac; in reality, it does not shine at all through November, December and January—at least, not to any appreciable extent. I believe that even your best growers, if they came over here, and tried their hand at the game, would be rather disgusted with the result. For this reason alone, I am afraid we shall never be able to produce as good flowers as you in mid-winter, unless you send Mr. Edison along with one of the Chicago packers, who, between them, might manage to bottle up some of the surplus sunshine during the summer months, that we could let loose in our carnation houses when it is wanted in the winter. Until that happy time arrives we shall have to be satisfied with what we can get in the ordinary way.

Thanking you for the honor you have given me in asking for and listening to these notes, which, I regret, I am not able to read personally, I will conclude with the best wishes for the future success of the American carnation in general, and the American Carnation Society in particular.

Vivat, crescat, floreat!

AUTHOR, A. F. DUTTON.

It is now some five years since "American Tree Carnations" were first grown and shown to perfection in England and I have the pleasure of being the first to exhibit them in the way they are now generally shown here. My first exhibit of note was at the Temple, 1903, when they caused quite a sensation, and I may say made the great start to their now present popularity. They first met with a great deal of criticism from the Border Carnation fancier, and I was told by one who is considered the finest raiser of this kind in our country: "Well, Mr. Dutton, I congratulate you on your exhibit, nothing could be more beautiful." With this remark I was quite content. Now they are being grown on quite a large scale as a market

flower, where before only the inferior and short-stem varieties were seen, such as Duchess of Fife, Uriah Pike, Miss Joliffe. But I may add there is a great difference in the quality of different growers, and it is only the few who can grow to perfection.

Last month the newly formed "Winter Flowering Carnation Society" held a very successful show at the Botanic, London, in which the American varieties predominated, there being classes for 36 and 18 bloom of a color, also for groups of cut bloom. The show was in every way a success and a fine lot of bloom was staged.

I may give a few lines on the new varieties that are being raised from your imported varieties. I consider that before many seasons we shall have some very fine varieties, quite a credit to their parent Britannia, which is being disseminated this year, and is the finest scarlet I know. It puts Robert Craig and Victory in the shade, and I firmly believe that we shall have other varieties in time of equal merit. But it is not for me to dwell on the possibilities of the future, but the past and present, which are facts.

In regard to shipping, this will always be a great drawback to business on a large scale, as it is far too uncertain to please the majority of receivers here. I myself have received very successful shipments, but these have been few and far between; for instance, one consignment turned out good, another from the same grower turned out the reverse, and the loss was 80 per cent. It would have been policy to have burnt the entire lots on arrival, as the survivors were weak, unhealthy and infected with rust, also "spot." I often feel I should like to think I had never to ship any more, as it is always a nightmare when shipping time comes in the spring.

Many varieties well spoken of and advertised in your papers as gaining awards of merit, prove very poor varie-

ties with us, such as Fiancee, Cardinal, Ethel Ward, Candace, Indianapolis, Nelson Fisher, Abundance and Flamingo. If this continues, your European buyers will certainly decrease, as it is quite difficult with the losses we sustain through shipping, to make the game worth the candle, even when procuring really first-rate standard varieties.

PERSONAL.

Visitors in Boston: C. B. Weathered, New York; W. A. Manda, So. Orange, N. J.

Visitors in New York this week: Fred Breitmeyer, Mt. Clemens, Mich.; J. C. Vaughan, Chicago; H. L. Jansen, Berlin, Ont.

The youngest child of John Scott of Brooklyn, N. Y., a boy of 14 months, has been critically ill with pneumonia, but the latest accounts indicate improvement and probable recovery.

Among recent visitors to Des Moines, Ia., were Carl Cropp, Chicago; Charles P. Braslin, San Jose, Cal.; Prof. Brown, Washington, D. C.; Mr. Crossland of Northrup, King & Co., Minneapolis; Mr. Johnson of Albert Dickinson Co., Mr. Steinmetz of W. W. Barnard, Chicago; Wm. Hagemann, New York; C. J. von Bourgondien and several other bulb and azalea men from the other side.

George A. Parker, superintendent of parks at Hartford, Conn., is seriously ill at St. Francis' hospital, where he was taken a week ago after having been sick two weeks. An operation was performed for the removal of a carbuncle in the back, which left him very weak, but he is now reported as being a little stronger. The number of Mr. Parker's sincere friends is limited only by the number of those who know him, and we know he will have their sympathy and earnest wishes for speedy and full recovery.

HARDY CHINESE PRIMROSE

(*Primula Cortusoides Sieboldii*)

Not new, but a neglected gem and nothing in this class more deserving the commercial florists' attention. No description would fit it better than a **Hardy Chinese Primrose** that can be forced into flower in a few weeks in a temperature of 50 degrees. (See Bailey). The flowers are about the same size, contain the same shades of color from white to purple-rose and are fringed like the *Primula Sinensis*. It will stand our Northern climate outside and blossoms in late spring. Flowers have good stems and stand out from the robust dark green foliage, making it altogether a most ornamental and useful plant for pots or outdoor cultivation. We can offer plants established in 2½ inch pots in twelve varieties for immediate delivery at \$1.00 per dozen, \$7.50 per 100.

Seed Trade

The business of G. W. Rogers who died recently in Yokohama, Japan, is offered for sale.

Joseph Milton, formerly with the Wm. Donnellson Co., of Minneapolis, has taken a position with the Iowa Seed Co., Des Moines, Ia.

It is asserted by good judges of the situation that the proposed seed inspection legislation has no chance of becoming a law this year.

Cratz Bros. dealers in clover seed, 118-120 Ontario street, Toledo, O., have suspended business. The sudden decline in clover seed and the irregularity of the market for some time are given as reasons. This firm has been in business since 1885 and since the death of Henry Cratz, two years ago, William E. Cratz has been at the head of the company.

The Nebraska Seed Co., Omaha, Neb., has entered suit against A. Rousset, of Paris, France, to recover \$3500, on a contract for seed which when delivered, they claim, proved to be of inferior quality to that ordered and paid for. They ask for a writ of attachment upon certain assets of M. Rousset, said to be in the hands of the Adams Express Co.

It has been announced that The Hill & Ross Co., dealers in seeds and farm implements, and The Hayes Music Co. have been merged into The Hayes Co., of Toledo, with a capital of \$80,000. The incorporators of the new company are J. M. Hayes, P. C. Hayes, A. L. Irish, J. P. McAfee, and S. S. McAfee. The Hill & Ross Co. has been in business for some time and had a capital of \$30,000, The Hayes Music Co. had a capital of \$9,000 and a surplus of \$40,000. The present stores of the companies will be abandoned and The Hayes Co. will locate in Cherry street. J. M. Hayes will be president and general manager of the new company. The Hill & Ross Co. was located in Superior street a very fine location for the retail trade.

STATEMENT OF PLANT IMPORTS.

There were entered at the port of New York during the three weeks from January 28 to February 18, 1907, the following plants, etc.:

From Holland—H. F. Darrow, 9 cs. plants; J. Dunn, 4 cs. flower roots; O. G. Hempstead & Son, 2 cs. plants; Peter Henderson & Co., 1 cs. bulbs; C. B. Richard & Co., 5 cs. roots; J. M. Thorburn & Co., 8 bales flower seed; Vaughan's Seed Store, 2 bales garden seed; Sundry Forwarders, 9 bales flower seed, 9 cs. roots.

From Belgium—Sundry Forwarders, 2 cs. plants, 4 cs. trees, 11 bags seed.

From France—C. C. Abel & Co., 18 cs. plants; August Rolker & Sons, 30 cs. do.; Sundry Forwarders, 137 cs. do., 1 cs. seed.

From Germany—H. F. Darrow, 1 cask seed; Peter Henderson & Co., 2

HERE'S A BARGAIN FOR DECORATION DAY Columbia Farm Longiflorum Bulbs

47-54 NO. MARKET ST., BOSTON, MASS

Comet Tomato

Those who force tomatoes should give "Comet" a trial. This variety has been the talk of gardeners around Boston the past season. Those who have seen it growing declare there's nothing to compare with it.

Seed, \$5.00 per oz. Trade packet \$1.00.

WILLIAM SIM, Cliftondale, Mass.

NEWS NOTES.

The Cottage Gardens, Queens, N. Y., have the contract for planting Bliss Park, Saginaw, Mich.

Fred Gall, a florist from Snohomish, was run down by a street car in Seattle, Wash., and was badly bruised.

John Clark of Cohasset has relinquished his lease of the Nelson Greenhouses at Marshfield, Mass., and the place is closed.

The Jefferson Fruit & Floral Co. has opened on East Lincoln Ave., Goshen, Ind., under the management of A. J. Santschi.

The park commissioners of Oklahoma City, Okla., will appropriate \$2000 for a greenhouse and equipments at Wheeler Park.

The report of Stanley D. Rood, superintendent of the School of Horticulture, Hartford, Conn., shows a growing interest in the work, and broadening of opportunities.

A Bill is before the Legislature of Oregon providing for the appropriation of \$5,000 for the importation of birds that are considered destructive to the various insect pests of the orchards.

George Wainwright, for fifty years a well-known florist and nurseryman of Trenton, N. J., is to retire from business; his greenhouses will be demolished and the land converted into building lots.

A default has been declared in the Central District Court at Worcester, Mass., against Miss Gertrude Lamson, known on the stage as Nance O'Neil, in the suit of C. R. Fish of Worcester, for payment for plants and flowers amounting to nearly \$250.

A boiler at the greenhouse of Theodore Dellert, Great Barrington, Mass.,

blew up on February 12. Owing to the small amount of pressure no great damage was done, and the prompt use of oil stoves saved the contents of the greenhouses from serious injury by cold.

Begonia Gloire de Lorraine has been setting seed in several different places this season, and growers are jubilant over the fact, for seedling plants are much more vigorous than those from cuttings, as has been proven in England, and this means a revivifying of the stock in this country.

The Lord & Burnham galvanized eave plate, which has been advertised in **HORTICULTURE**, has evidently found many very appreciative friends among greenhouse men. Robert Crawford, Jr., of Philadelphia, is one of them and is especially enthusiastic over the way in which it cares for the drip and prevents rotting of the wood work.

Charles Henlock, superintendent of Propagating Gardens, Washington, D. C., is conducting an experiment with virgin mushroom spawn, which points not only to his success, but to the subsequent dissemination of valuable information to the trade. The point at issue is to lessen the labor and complications attendant upon this industry, and thus increase the profits.

BUSINESS EMBARRASMENTS.

The Shady Hill Nursery Company, a corporation capitalized for \$100,000, which was organized in 1892 and which has operated large nurseries at Bedford, Mass., made an assignment for the benefit of creditors. The assignees are Heber B. Clewley, who for about a year has been manager of the nurseries, and Joseph Sargent, Jr., of 50 Congress street, Boston, an attorney. Until about a year ago E. L. Beard was manager of the corporation. The offices are at 155 Milk street.

AN OLD-TIME FLORIST.

William Christie, formerly gardener to Mrs. Mary J. Goddard of Newton, Mass., and later in the retail florists' business at Woodlawn, has offered his place for sale.

Mr. Christie belongs to the class of "old country" men who, like the subject of Mr. Anderson's article in last week's issue of this paper, constitute such an essential element in the development of horticulture in New England. A life member of the Massachusetts Horticultural Society, a constant exhibitor in the old days, his memory a perfect storehouse of reminiscences of people, events and incidents connected with this branch of activity, show how closely his life has been interwoven with the culture of trees, plants and flowers.

Mr. Christie has had a successful business at Woodlawn but desires to pass the remainder of his days in a small place, not far from Boston, where a few sashes, some poultry and a garden are the only care.

G. H. HIGGINS.

OBITUARY.

Mrs. Kurtzwell, mother of Mathias Kurtzwell, one of the proprietors of the Iowa Seed Co., has just passed away at the age of 78. She leaves a husband and one son.

Among the victims of the Larchmont were the wife of George A. Jansen, proprietor of the Park Greenhouses, South Providence, R. I., and their daughter, Mrs. H. V. De Thestrup. Mr. De Thestrup was recently appointed head gardener at the agricultural experiment station at Burlington, Vt.

CUT FLOWER MARKET REPORTS

BOSTON The spring slump is on the way and is due any day seemingly. Roses still hold on the moderate side as to quantity and are safe up to date but most other items on the list are very weak and there is a big decrease in prices. For the past two or three days the demand has fallen off; accumulations are in evidence on bulbous stock especially.

BUFFALO Favorable weather continued the past two weeks for the cut flower and plant trade and business was exceptionally good, but rather short supply in some lines inconvenienced the retailer as well as the wholesaler. Now as the Lenten season has begun it will be much easier to fill orders as the supply of stock on many lines has doubled, and is anxiously awaiting the buyers and at somewhat lower prices. White stock, especially carnations, has been the most in demand. Floral work being the main feature has kept the wholesaler cleaned up on narcissus, lily of the valley, tulips, lilies, etc., these being substitutes for roses which have been scarce, especially the shorter grades. Beauties were in fair demand but not too many were had, prices holding firm since the holidays. Enchantress, Red Lawson, Victory and White Lawson fair in quality and quantity. Violets were much in demand for St. Valentine's Day. Home-grown were best in demand; eastern stock not up to the standard. Bulbous stock, especially daffodils, is entering the market in heavy supply. At the time of mailing this report a genuine March day is witnessed with plenty of rain and snow.

COLUMBUS The trade are feeling much happier than for a long time. At last we are having some sunny days, and in consequence roses and carnations are again increasing in quantity and greatly improving in quality. But prices still remain high, as we have had such a dearth of flowers for the past two months that it will take time for things to assume a normal basis. It has taken the most consummate tact to make the daily stocks fill the orders, and had it not been for an unusual amount of bulb stock, a large part of them could not possibly have been filled. St. Valentine's Day brought a lot of orders, the craft

agreeing that the largest business ever done was accomplished this year.

INDIANAPOLIS The retailers had no cause to complain the past week, as all sold out clean at good prices. Roses are slowly recovering from the scarcity which has prevailed. Good carnations are to be had in abundance, although some could stand a little improvement in strength of stem. Daffodils and other bulb stock are more abundant and sell a trifle lower, the demand being good. Sweet peas find ready sale at good prices.

Trade in flowering plants is unusually good, many people turning to these in preference to cut flowers. Violets have had a good call, particularly for St. Valentine's day, the trade being a little ahead of former years. Asparagus Sprengeri and maiden-hair continue to be scarce, while common ferns and other greens are in ample supply.

NEW YORK The market depression noted last week has continued with increasing intensity, and the predicted inundation of material with slaughter prices is now a reality. Promptly with the coming in of Lent the break-up began, since which time the street dealers and speculators have been coming out from their late seclusion and the clamor of dickering and bargaining as of yore is heard throughout the wholesale markets, while the regular buyers gaze on with ill-concealed disapproval as they mentally compare the prices eagerly paid a few days ago with the values freely offered today. Still the American Beauty is refractory, however, and perfect specimens are practically out of the question. It is a long time since this rose was so universally crippled as it has been this season. Bulbous material is an avalanche at present, and carnations are almost in the same condition.

PHILADELPHIA Trading the past week, especially in connection with the St. Valentine occasion, was away behind expectations. But the reaction has set in and the prospects now are quite bright. St. Valentine has no business to find himself stranded on the second day in Lent. American Beauty roses are so scarce that it is almost impossible to quote prices. Richmond, Liberty and the teas are more plentiful, with prices

easier. The same may be said of carnations, violets and sweet peas. The lily of the valley market is fairly healthy, but supplies are so plentiful that prices are slightly weak for the time being. Cattleyas are coming in handsomely, and find ready takers. Cyrtipediums are on their last legs, but spray orchids are filling the gap. Easter and calla lilies, tulips and other bulbous stock are in increased supply and slightly ahead of market requirements. Gardenias are choice and in good supply.

WASHINGTON Notwithstanding the heavy snow and cold wave that has so persistently lingered around Washington during the past fortnight, trade has been brisk. The social functions create good demand and both quality and prices are satisfactory. Bulb flowers are becoming more abundant each week, though so far they have not in any way displaced the carnation, which is a favorite here among all classes. The increased percentage of sunshine has strengthened all plant life, and quality with carnations especially, has about reached a maximum, though quantity is lacking. All growers have complained of "short cuts" as a result of the wet season; in many instances it has been difficult to clear expenses, and brighter prospects are welcomed by all.

Des Moines, Ia., reports that there has been a steady demand for flowers and plants, and despite the cloudy weather the supply has been all-sufficient.

THE LANDSCAPE WORK AT THE JAMESTOWN EXPOSITION.

Mr. Charles H. Pratt, superintendent and engineer in charge for Board of Design, at the Jamestown Exposition, calls our attention to an inaccuracy in Mr. Thomas H. Brown's communication concerning the work at the exposition grounds, which appeared in our issue of February 2. Mr. Pratt states that Mr. J. T. Withers, while doing some work on the grounds for private parties is in no way connected with the Exposition as an official, Mr. Manning being in full charge of the landscape work.

Mrs. Amelia Miller has purchased the interest of E. L. Pope in the Allison-Pope Floral Co., of Davenport, Ia.

GARDENERS: ATTENTION.

Messrs. Olmsted Brothers sent us the following communication:

"We desire to communicate with gardeners, both single and married, who have had experience in all kinds of outside and inside work. They should be thoroughly familiar with plants and planting, and should also have had experience in grading and road construction. We constantly have calls for men who have had experience in the above line of work and desire to have their names on our books. Gardeners should, if possible, apply in person. **OLMSTED BROTHERS,** Brookline, Mass.

Definite Results

are what you want to do your figuring on. When a firm talks boiler economies, make them prove up by showing you a boiler actually at work, making these economies—not only making them today, but one that has been making them year in and year out. We base our estimate of what our boilers will do for you, on what they have done for others. Corrugated Firebox or Sectional, just as you like—either one is a boiler of economy.

CARNATION WINSOR

We have not advertised Winsor until now because we have not had to. It is so good and its merits have been so generally recognized that it has practically sold itself. Our advance orders were very large, and we did not feel the necessity of advertising it until we were in a position to fill and take care of our early orders. We are now nearly caught up with our advance orders and have a fine lot of stock on the cutting bench, so that we can promise, for the present, February delivery on orders received within a short time at least.

If you have not already purchased a stock of this, you should lose no time doing so. We are going to sell more Winsor than has ever been sold of any novelty that has ever been put on the market. Its merits and value are now so well established that one is not buying a chance. We are cutting and shipping right along between one and two thousand flowers a day to the New York market, where our flowers are sold.

There is nothing on the market that approaches Winsor to-day in carnations. It is the best seller on the market, on account of its lovely color, fine stem, perfect calyx, and fine keeping and shipping qualities—in fact, in this regard it covers every necessary requisite as a market variety.

From a growing standpoint, it leaves little to be desired. It is unusually healthy, very vigorous and productive, and, we think, the most profitable carnation ever introduced. This may seem high praise for a carnation, but it is no exaggeration. Winsor gives a large percentage of high-quality flowers. It practically does not split at all. Notwithstanding the fact that we have had the darkest, dullest winter we have ever had, when the Enchantress and Lawson types are splitting badly all over the country with every one, we have not had one-half of one per cent. of split calyxes or Winsor—in fact, we seldom see a split calyx. Hundreds of visitors who have been at our Scarborough place will substantiate this statement, extravagant as it may appear.

Any one who fails to plant Winsor this year will regret it. Rose Pink Enchantress is good, and a good many other varieties are good, but if you want the winner, plant Winsor.

We not only have a good thing in Winsor, but we are delivering good stock. As a sample of the testimonials that we are receiving, see this space in last issue. We are trying to give 110 cents on the dollar, and guarantee to please everybody with the stock sent out, or we will not ask you to pay for it. We have still to receive our first complaint, and we have shipped between one and two hundred thousand cuttings to date.

STRONG ROOTED CUTTINGS, February delivery, \$12.00 per 100, \$100.00 per 1,000.

MABELLE

New Pink Carnation for 1907

Color—A peculiar shade of lovely pink, with a faint yellowish cast; several shades lighter than the Lawson. Unlike most Pinks, the brightest sun does not injure the color. Size—3 to 4 inches in diameter when established. Odor—Pleasing, but not strong. Stems—Invariably strong, but always graceful, ranging from 12 to 30 inches during the season. Habit, etc.—A very quick, active grower, making specimen plants in a short time, even from late cuttings. On account of its rapid growth, requires supporting very soon after benching. Gets away rapidly, blooms early and gives long stems right from the start. Productiveness—P. odious is the best word we know of to use here. It is the most incessant bloomer early and late, we have ever grown. Stock limited. Delivery January 5th to 10th and later.

Price \$12.00 per 100, \$100.00 per 1000

THE H. WEBER & SONS CO., Oakland, Md.

DON'T Be Afraid To Invest In ROSE PINK ENCHANTRESS

It is both free and "fancy"—a sure money-maker.

Price \$7.00 per 100; \$60 per 1000

Delivery January and later. Write for Descriptive Circular.

Gardens and Plantations of Jamaica

(See Frontispiece.)

At this time when people everywhere are sympathizing and mourning over the terrible calamity which befell the beautiful island of Jamaica, a short story about its lovely gardens and plantations should interest many.

Jamaica is only 144 miles long and 49 miles wide in its broadest part. Comparing Jamaica with other parts

ON THE RIO COBRE RIVER, JAMAICA

of the world, there are few places of the same size that can claim so many genera and species of plants. There are about 500 species of ferns, and of flowering plants there are over 2000 species described and many species are yet to be found in the Blue Mountains in parts which have not been explored.

The island has lofty, rugged mountains which are clothed with the richest vegetation. The highest peak in the Blue Mountains is 7,423 feet. These mountains at different altitudes give all kinds of climatic conditions, with the exception of frost and snow, therefore there are to be found plants from all parts of the world. In the lower parts of the island where the tropical conditions are most favorable one finds plants of the most tropical types. Up in the mountains plants from northern countries have been introduced. I found some of our North American trees and they were doing fairly well. *Liriodendron tulipifera*, the tulip tree, was a good-sized tree and the worst enemy it had to contend with was the strong winds of the high mountains. *Iris germanica* I found in bloom in January and growing most luxuriantly.

When a person gets enthusiastic over the rich vegetation of this island a listener or reader can hardly credit the descriptions given of the luxuriance of the vegetation. With this explanation about the climatic conditions at different altitudes and of the introduction of plants from all parts of the world it can be easily seen and understood how rich and varied the vegetation of this island is. Persons who are not familiar with plants give credit to Jamaica for many plants that do not

belong to its flora. In fact, the most showy plants one sees in the gardens and in the streets are not natives but have been introduced. Jamaicans are great lovers of plants and have worked hard for many years to get all the new and most showy for their gardens. When gardening was in its infancy in this country Jamaica was offering a prize of one thousand guineas to any person who would introduce the bread fruit to the island. The history of the introduction of many of the useful and showy plants that are seen in the island is intensely interesting.

The important gardens of Jamaica are its botanic and public gardens. To get at the history of the botanic gardens we have to go back one hundred and fifty years. The first botanic garden in the island belonged to a private gentleman, Mr. Hinton East, and was situated near Gordon Town, nine miles from Kingston. Sir Basil Keith was governor in 1774 and he was determined to have two botanic gardens, one a "European Garden" and the other a "Tropical Garden." In December of that year a committee of the legislature recommended that £700 be appropriated for the purchase of a piece of land for a botanic garden and that £300 be provided for the annual salary of a botanist. The following year, 1775, a piece of land adjoining Mr. East's was purchased and Dr. Thomas Clarke became island botanist. At this time we find many interesting and useful plants were introduced. This same year Dr. Clarke introduced the tea plant, camphor, Litchi, *Ciccas circinalis* and *Desmondium gyrans*. Three years later

ON THE RIO COBRE RIVER, JAMAICA

Akee (*Blighia sapida*) was introduced and in 1779 the clove tree was first brought to the island. About this time it was found that the ground in the botanic garden at Gordon Town was unsuitable for some of the plants and it was decided to purchase land at Bath where the climatic conditions and the soil were more favorable.

In the year 1782 one of Lord Rodney's squadron captured a French ship bound from Mauritius for Hayti

and on board were found many exceedingly useful economic plants. They were sent to the botanic garden at Gordon Town and were found to comprise many new introductions such as mango, cinnamon and jack fruit. In 1829 the botanic garden at Bath was increased by three acres of land. Later on in 1846 and 1847 Sir W. J. Hooker, director of Kew Gardens was much interested in Jamaica and sent many new plants such as mangosteen, Durian and *Musa Cavendishii*. *Poinciana regia*, *Spathodea*, *Bougainvillea spectabilis*, *Amherstia nobilis*, and Assam tea were introduced in 1849-1850.

In 1860 the land for Castleton gardens was purchased and in this same year seeds of *Cinchona succubra*, *C. nitida*, and *C. micrantha*, were sent from Kew by Sir W. J. Hooker, and many plants were raised from them. During Sir John Peter Grant's administration in 1868 the cinchona plantations were begun and he assigned 600 acres of virgin forest land for this purpose on the southern slopes of the Blue Mountains ranging from 4,000 to 6,000 feet above sea level. We find at this time that Gov. Grant was very much interested in the gardens and through his influence with Sir Joseph Hooker many new plants were received from Kew which greatly enriched the gardens. Many of the fine plants in Castleton were planted during his administration. Sir John also began the wonderful irrigation plant on the Rio Cobre river at Spanish Town where today can be seen the finest bananas in the island of Jamaica or perhaps in the whole world. Quite a large amount of money was spent on this fine irrigation system. The governor, who had spent many years in the East Indies, was well posted in all that belonged to irrigation, and he knew well the effect it would have on the vegetation on the plains. The people were slow to take to the new idea of irrigating the land and the governor never saw the effect on the crops that were grown on the irrigated soil.

At this time another great piece of work was undertaken, the planting of the Palisades with cocoanut palms. The Palisades is a narrow strip of land with Port Royal at one end, and this narrow strip of land makes a natural breakwater to the beautiful harbor. It took over twenty thousand cocoanut palms to plant this piece of land. The plants grew well and greatly improved the natural beauty of the harbor. However, I am afraid that most of the plants perished in the dreadful earthquake of January 14th.

Another garden of great importance to the city was begun at this time. It is known as Parade Garden and is situated in the centre of Kingston. It proved a great boon during the last earthquake as it was the only place where the people could escape from the falling buildings. The governor at this time was much interested in sugar cane and ordered that every species and every true distinct and permanent variety should be procured and space given to them at Castleton gardens. Very soon the gardens had over sixty new varieties of sugar cane, most of them coming from the Mauritius botanic garden. The government, about 1873, obtained possession of about 200 acres of land at Hope, a place about five

or six miles from Kingston. Very soon the collection of sugar canes at Castleton had to be transferred to Hope and this was the beginning of one of the most interesting of all the gardens in Jamaica.

These gardens are more than botanic gardens, in fact they do the work that we are doing in this country at our experimental stations, and have been of great service to the people. They introduce new plants, propagate them and send them out to the people. They pay particular attention to economic plants. Much time has been spent in raising sugar cane seedlings and they have raised some fine promising ones. Some of these have been tested and they produce a much larger quantity of sugar per acre than the old varieties did.

Before concluding these notes it would be unfair not to give credit to a man who took charge of most of the practical work done at Castleton in its early years, planting the Palisades and starting the cinchona plantations and gardens in the Blue Mountains. This gentleman's name I found in the visitor's book at Cinchona Gardens last January and above his signature I was pleased to read the following note: "I made and planted this garden thirty-seven years ago, and I am pleased to see how beautiful and well it looks today, Oct., 1906. Robert Thompson."

You will also notice in these notes that during Sir John Peter Grant's governmentship that much was done to the gardens and plantations. I was very deeply interested in his work and made much inquiry, because I was brought up on his estate in Scotland and worked in his garden. He made a good governor for Jamaica and was a good laird in Scotland.

The happy recollections of the rich and varied land; the luxuriant vegetation; the wonderful scenery, and the pleasant people of this island, where only a few weeks ago I traversed these delightful mountains, are still fresh in my memory. I was shocked when I learned of the terrible calamity which had destroyed the lovely surroundings of Kingston. Only a few days before I had climbed these mountains, up 6,000 feet, and I marvelled then at their wonderful formation and also thought of the terrible things that must have happened when they were formed. At a time like this a person wants to find out the meaning of the word earthquake and what it is, and turns to Geikie and Shaylor to get information; but these great sages can tell very little of the stupendous things that take place in the centre of the earth. Anyway, one thing that comes right home to a person who has travelled and observed in these wonderfully formed mountains is that this great calamity which recently befell the island is only as a flea bite compared with the things that have taken place there in the millions of years that have passed.

The day I left the city of Kingston it was all aglow with bunting and flags, cannons boomed, bands played, every one rejoiced to greet and meet men who had come to visit them from various parts of the world on the occasion of the Agricultural Conference, and who had done much for their beautiful island. How little we know in the midst of our rejoicings what may happen to us! Two days later the whole world shuddered at what took place in a few minutes' time in Jamaica.

In other articles I should like to tell you and show you what these gardens contain and what they are doing in them.

British Horticulture

AN EARLY CARNATION SPECIALIST.

In the recently published report of the National Carnation and Picotee Society, an interesting reference is made to Mr. James Hogg, a leading cultivator of carnations of sixty years ago. His best known work is entitled "The Carnation and Other Garden Flowers," which ran into several editions. It contained a colored plate of a bizarre carnation, very much in the style of Franklin's Tartar, published half a century earlier. A full description is given of the yellow ground picotees. The yellow carnation was introduced into England in the reign of Queen Elizabeth, and had developed into the yellow ground picotee in the 17th century, but probably owing to the English climate not being adapted to the seeding of carnations in the open garden the best yellow ground picotees came from the Continent in Hogg's time, and he states that some of them were raised in Morocco. The names of fifty varieties are given, but none of them are English. Hogg records the fact that the Empress Josephine had an admirable collection of yellow picotees in her garden at Malmaison, and he adds: "The late Queen Charlotte and the Princesses had a superb collection of yellow picotees at Frogmore."

THE LATEST CARNATION BOOK.

From Hogg we gain an insight into the early development of the carnation. The "last word" at present on the subject is obtained from an interesting book recently published by Mr. Haywood Mathias, the secretary and originator of the Winter Flowering Carnation Society, and Mr. P. Smith, who has been associated with Mr. Mathias in his culture of the flower at Medstead in Hants. The writers take a broad view of the situation and have no foolish prejudice, as is the case with some Britishers of insular ideas. "The superiority of the American over the English winter-flowering carnation is indisputable," they state, "at any rate as far as practical decorative value is concerned, and though it cannot and must not be judged by the standard of our border varieties, for the purpose for which it is designed, the American cannot be beaten by anything hitherto produced on this side of the water." Dealing with items of culture, the writers point out that the bench system is universal in America, but they consider that this is only applicable where carnations are grown commercially and on a large scale. "It does not at all follow," the authors concede, "either that what answers in America should of necessity answer in England, where the climatic conditions are absolutely different, and we may mention that far and away the best

blooms we have seen in this country have been grown in pots, and have been the produce of three different nurseries."

THE LATE SIR MICHAEL FOSTER.

The loss of a great horticulturist is mourned in the recent demise of Sir Michael Foster, who for many years had devoted attention to improving the iris. Sir Michael took up the cultivation of irises over thirty years ago. He commenced by growing all the ordinary known forms of the iris, and then he sought to get new types, or to bring back old ones, obtaining them from the various parts of the world where the plants grow. In this work he was very much helped by the late Dr. Regel of St. Petersburg, who was able to import a large number of plants from Central Asia, and by Max Leichtlin of Baden-Baden, and others. Subsequently he received a great deal of assistance from missionaries, especially the Americans in Asia Minor. Sir Michael got into correspondence with them, and they sent him a large number of plants, some of which proved to be new. He continued to rely upon the missionaries until the leading firms of nurserymen sent their travellers into these regions. Experiments were first made with the common bearded iris. An *Iris variegata* was crossed with *I. pallida*. From that cross Sir Michael Foster obtained 200 or more seedlings, which comprised among them many of the old garden forms, often spoken of as German irises, such as *I. neglecta amœna* and the like. Among the newer ones was a variety which afterwards became very popular under the name of Mrs. Horace Darwin.

SOME DEVELOPMENTS OF THE IRIS.

Out of the light blue *Iris cengialti*, crossed with the pollen of *I. Balkana* (a bronze-purple) Sir Michael Foster obtained about 18 seedlings of varied colors, not only light blue and deep purple, but pure white and several shades of yellow, as well as mixed tints were included. From an early period this noted hybridizer paid attention to the *oncocyclus* irises. The true *oncocyclus* irises have been crossed with the *regelia* section, such as *I. Korolkowi*, and some striking tints have been secured. Interesting crosses were also made between the *oncocyclus* and the *regelia* irises with the *rhizomatous* irises. *I. iberica*, crossed with the pollen of *I. pallida*, and *I. pallida* crossed with the pollen of *iberica* produced some very attractive forms. Another success was the cross between *I. Lortei* and *I. pallida*. The hybrids between *oncocyclus* and *rhizomatous* irises were found to be very sterile, so that in most cases it was not possible to go beyond the first generation. Sir Michael raised several interesting hybrids of *I. reticulata*, but these were lost through fungous disease, but he was more fortunate with *I. xiphium*. Some beautiful hybrids of this section were crossed with *I. filifolia*, and a *xiphium* was crossed with *I. tingitana*. Some useful work was also done in the *Juno* section. It will thus be seen that the deceased scientist had benefited horticulture considerably by his hybridizing work.

SPECIAL ROSE NUMBER NEXT WEEK
Colored Plate—H. T. Rose Dean Hole

To
memory
dear

Referring to the articles in our two last issues on James Nichol and William Christie we have received much appreciative comment thereon. It is well that HORTICULTURE should speak a word of tribute in the passing of this class of men and the greenhouses in which they delighted—Marechal Niel roses and bougainvilleas trained to the roof, an abutelon here, an orchid or an amaryllis there. When once abandoned these houses are never duplicated and most of them have already disappeared but they filled their place in the history of horticulture in New England and a line of commendation for the sturdy pioneer work performed by the men who conducted them is only a just due.

A just cause
for criticism

It is much to be regretted that the practice of "camp following" should become so flagrant in connection with the meetings of any society as to necessitate the rebuke voiced by our seed trade correspondent in his notes in this issue, on the canners' convention. One finds it hard to believe that any man with any pretensions to dignity would, for the saving of the membership fee in a society and the desire to get something for nothing so far forget his self-respect as to scheme to participate, unbidden, in the enjoyment of hospitalities to which he has no right, yet it is by no means an uncommon thing and there are few, if any, conventions where more or less of this imposition does not exist, in defiance of all efforts to thwart it.

A promising
plan for
home improvement

The plan proposed by the Madison, Wis., Horticultural Society to induce general co-operation on the part of the people of the city in an effort to adorn and beautify their city, as described in another part of this paper, is a very commendable one beginning as it does at what may be called the kindergarten stage of home improvement. Unfortunately many of the well-meant efforts of town improvement associations are over-ambitious and too costly to secure at once the cheerful participation of the people whose benefit and refinement is most directly sought. Artistic horticultural appreciation is a plant which requires time for growth and which at first will respond more readily to the sweet alyssum and nasturtium influence than to the more advanced ideas of lawn and border embellishment. Under the stimulus of local rivalry advancement will proceed with rapid stride and each successive year will see progress toward higher ideals and a better estimation of what is fit. The transition from untidiness and neglect to neighborhood orderliness and elegance depends much upon good example. It is remarkable how widespread is the influence of one neat garden upon the surrounding community.

Encourage
organization

The promoters of the Society of Southern Florists and Ornamental Horticulturists seem to have made good their promise of a useful meeting at the first convening of the young society. The attendance was not what it should have been but that was not the society's fault; it was only another demonstration of the unwillingness of those engaged in horticultural pursuits to take hold and assist in any organized movement the object of which is the general good. We are in full sympathy with the aims and purposes of this society as announced. Some well-meaning persons think they see in the multiplicity of these local and special societies inroads upon the well-being of the S. A. F. We have never felt any solicitude in that direction. Rather would we encourage them as helpful adjuncts to the great national organization which by wise and comprehensive policies on the part of the latter may be enlisted as efficient aids in the furtherance of the objects for which it was founded. While the result of an efficient organization in the south may, by the fostering of home industry, curtail in time the purchasing of certain specialties hitherto supplied only by northern growers, yet the developing of the horticultural possibilities of our vast southern lands cannot but benefit every section of the country and there is no question but that much of the material for which money is now sent abroad might be produced here in equal quality and at competing cost.

NEWS OF THE CLUBS AND SOCIETIES

SOCIETY OF SOUTHERN FLORISTS AND ORNAMENTAL HORTICULTURISTS.

The first annual convention of this society was held in New Orleans, La., on February 14, 15, 16, 1907, with about forty local members in attendance. The program was as follows:

Opening Session. Thursday, February 14—Address of welcome, Mayor Behrman; Response, Prof. Stubbs; President's address; Discussion of president's address; Reading of the constitution and by-laws of the society as adopted at Chattanooga; Treasurer's report; Executive business; Essay, Chrysanthemum-growing in the south, F. P. Davis, Mobile, Ala.; Question box.

Evening Session. Thursday, February 14th—Selection of meeting place for next convention; nomination of officers for ensuing year; Essay, profitable orchids for the florist, J. A. Newsham, New Orleans; President's reception.

Morning Session. Friday, February 15th—Question box; Unfinished business; Essay, packing, shipping and express rates, C. W. Eichling, New Orleans; Essay, roses under glass in the south, R. Lockerbie, New Orleans.

Evening Session. Friday, February 15th—Balloting for officers; Unfinished business; Essay, what the south can grow for northern markets, W. B. Wichers, Gretna, La.; Essay, with lantern slides, Prof. Barnett; Value of laws and regulations for controlling spread of insects and plant diseases, Prof. A. A. Rosenfeld; Question box.

Morning Session. Saturday, February 16th—Question box; Unfinished business; Essay, experience with Carnations in Alabama, W. B. Patterson, Jr., Montgomery, Ala.; Essay, gardening in the public schools, Prof. Caldwell, Nachitoches, La.; Essay, needs of the retail trade, C. Eble, New Orleans.

Evening Session. Saturday, February 16th—Grand banquet to visiting members of the society.

Owing to the absence of the president, R. C. Berckmans, Vice-President C. W. Eichling presided. Paul Abele, secretary, Joseph Steckler, treasurer, were in attendance, also the following visitors:

Mr. Patterson of Montgomery, Ala., Mr. Stoddard representing Caldwell the Woodsman, Evergreen, Ala., Mr. Kroeschell of Kroeschell Bros. Co., Chicago, Wm. Hagemann of New York, C. D. Otis, Lake Charles, La., C. L. Lieber of Pontchoula, La., Mr. Rosenfeld of Baton Rouge, La., and Mr. Galvan of Uniontown, Pa. While the attendance from outside the State did not meet the expectations of the local florists, the enthusiasm of those in attendance gives every promise of making the association a permanent institution.

The program as published herewith was fully carried out, and the essays read and discussed were of exceptional merit.

The following made very creditable exhibits and received certificates of merit:

J. Steckler Seed Co.: Seed and vegetables; special mention for Creole Corn. S. Nosaka & Son: Wire garden stands and frames. Abele Bros.:

Greenhouse and bedding plants. C. W. Eichling: *Adiantum hybridum* and *magnificum*. Chas. Eble: Hardy palms and shrubs. J. A. Newsham: Greenhouse and foliage plants; especial mention for *araucarias*, *dracaenas* and pair of magnificent *Cocos australis*. B. M. Wichers & Co. of Gretna, La.: Exhibit of var. *Nephrolepis* and especial mention for N. Whitman; both specimens. M. Cook & Son: Exhibit of sweet olives. Paducah Pottery Co., Paducah, Ky.: Exhibit of pottery. N. B. Patterson of Montgomery, Ala.: Exhibit of carnations.

The following received honorable mention: Kroeschell Bros. Company, Chicago, greenhouse boiler and Ideal wrench. U. J. Virgin, roses; Caldwell the Woodsman and Geo. R. Carter of Evergreen, Ala., exhibits of evergreens and smilax.

The committee on awards consisted of R. Lockerbie, Ed. Baker and Chas. R. Panter. R. Lockerbie was the chairman of arrangement committee, Chas. Eble of the badge committee, Ed. Baker of the exhibit committee and Chas. R. Panter superintendent of exhibition hall. The following were elected as officers for the ensuing year: President, J. A. Newsham; first vice-president, F. P. Davis, Mobile, Ala.; second vice-president, N. P. Patterson, Montgomery, Ala.; secretary, Paul Abele, New Orleans, La.; treasurer, J. Steckler, of Steckler Seed Co., New Orleans, La.; executive committee, Ed. Baker, C. R. Panter, R. Lockerbie, and E. H. R. Green of Dallas, Texas.

The banquet was presided over by Otto Abele, president of the New Orleans society, who, after the banquet had been served delegated C. R. Panter to act as toastmaster. The first speaker called on by Mr. Panter was C. W. Eichling, who bespoke a welcome to the visiting members of the society and urged that every effort be made to make the new southern society a success.

J. F. C. Waldo, assistant city attorney, especially delegated to represent Mayor Martin Behrman, spoke to the members present, praising them for the good work they had done in making such a creditable exhibit and wishing the new association much success.

R. Lockerbie, one of the members of the entertainment committee, spoke next. He was followed by Ed. Baker, one of the oldest members of the New Orleans society and P. A. Chopin. President-elect J. A. Newsham came next. He told of his hopes regarding the work of the society and promised to do his utmost to make the organization a great success. W. B. Patterson, Jr., of Montgomery, Ala., one of the visiting members spoke on behalf of the visiting delegation, thanking the New Orleans men for their hospitable entertainment. Paul Abele, the newly elected secretary, spoke for the officers of the southern association, being followed by John Eble, Joseph Steckler, Chas. Eble and several others.

The hall and tables were artistically decorated with wild smilax from Evergreen, Ala., carnations from Montgomery, Ala., ferns, roses and palms from New Orleans, by C. W. Eichling and H. Cook.

ST. LOUIS HORTICULTURAL SOCIETY.

On Tuesday afternoon, February 19th, the executive committee of the St. Louis Horticultural Society held their regular monthly meeting at the Hamilton Hotel. After routine business, 19 new members were enrolled. The spring flower-show committee made their report, and after a few minor changes the following rules and premium schedule were approved and adopted:

RULES.

1. Competition open to all.
2. All entries must be in the hands of the Secretary by March 4th.
3. All exhibits must be in place by 12 o'clock noon, March 5th.
4. Out of town exhibits will be staged by the Society, if desired.
5. Exhibition cards shall not exceed 7x10 inches.
6. No exhibit shall be removed from the hall without consent of the Secretary.

Class.	Prizes.	
	1st	2nd
1 Collection of plants in bloom.	\$10.00	\$5.00
2 " " bulbous plants in bloom, accessories admissible	8.00	4.00
3 Fifty foliage and blooming plants	10.00	6.00
4 Six foliage or blooming plants exhibited by amateur	5.00	
5 Specimen plant.....	3.00	
6 " " blooming plant..	6.00	
7 Six blooming Lily plants (Harrisii or Longiflorum) ..	6.00	3.00
8 Display of Lily of the Valley	5.00	
9 " " " Pansies.....	3.00	
10 " " " Violets.....	3.00	
11 " " " bulbous flowers..	5.00	
12 Five vases of carnation blooms, 5 varieties, 25 in each vase.....	5.00	3.00
13 Vase of 50 white carnations.	2.00	
14 " " 50 light pink.....	2.00	
15 " " 50 dark pink.....	2.00	
16 " " 50 red.....	2.00	
17 " " 50 variegated	2.00	
18 " " 50 any other color.	2.00	
19 four vases of roses, in 4 varieties, 25 in each vase.	10.00	
20 Vase of 25 pink roses.....	4.00	
21 " " 25 white	4.00	
22 " " 25 red	4.00	
23 " " 25 any other color..	4.00	
24 " " 25 American Beauties	15.00	
25 Floral basket.....	12.00	8.00
26 Vase of flowers arranged for effect	10.00	6.00

The spring flower show will be held in the Masonic Temple hall, where a successful show was held some years back. In addition to the regular exhibits, some of the most prominent florists will make up booths and exhibit attractions in floral art. Professor Dillwyn M. Hazlett has been engaged to give illustrated lectures, which fact alone should attract immense attention. Moreover, the committee is still working hard; in fact, they realize that there will be little time for rest until after the show, and as this will be a show given by and for the upper set, it must present something worthy of the attention of those who are invited as well as creditable to the society under whose auspices it is held. Entries or letters of information should be addressed to the undersigned.

OTTO G. KOENIG, Secretary.

ALABAMA STATE HORTICULTURAL SOCIETY.

The fourth annual meeting of the Alabama State Horticultural Society convened February 6 at 11 o'clock at the New Exchange Hotel, and was marked by an unusually large attendance of members of the society and friends.

The morning session was taken up with the address of welcome by Judge E. F. Baber, city recorder, who took the place of Mayor Teague on the programme; the annual address of President W. F. Heikes; the report of R. S. Mackintosh, secretary of the society, and several fine papers and addresses by members of the society and members of the Montgomery Flower Growers' Association on the subject of horticulture and floriculture.

In his address of welcome, Judge Baber said he had been commissioned by the mayor to extend to the members of the society and their friends, in the name of the mayor and citizens of Montgomery, a most hearty greeting and a cordial welcome to Alabama's capital city. He said it was an esteemed privilege which the city enjoyed to entertain a society which represents the sum total of the knowledge of the best and highest in every branch of horticulture and floriculture.

To the address of welcome, Prof. J. F. Duggar, director of the agricultural station at Auburn, responded in a few words, saying it was well and fitting the annual meeting of the association be held at Montgomery at this time, as it was at this place the first regular meeting was held four years ago, and the meeting this year is designed to show by report and by increased membership and large attendance that the organization has proven all its promoters hoped and expected.

The address of President Heikes was comprehensive, touching on every branch of horticultural industry, giving valuable information concerning the aims and objects of the organization and presenting useful and reliable facts and figures of practical and commercial value bearing upon the horticultural and agricultural interests in the state.

Miss E. C. Andrews gave an interesting and instructive address on "Native Shrubs."

Prof. Hugh N. Starnes of the Experiment Station of Georgia made an able address on "Street Shading." He advocated municipal control of trees planted for street shading in cities and towns. He said in the planting and cultivating of shade trees in cities there is a greater return for the smallest expenditure of time and money than it is possible to obtain in any other way, for after the trees have once been planted, nature steps in and finishes the work. He spoke of a number of cities remarkable for beautiful street shading, where the municipality have the matter in charge. From a practical and scientific standpoint, it is to the interest of the city that the matter of planting trees for street shading should not be left to the individual.

He gave a list of trees most satisfactory for street planting, including the elm, the willow oak and the water oak. These last, because of slow growth for the first fifteen years, are

not commended for general use, and for that reason are not handled extensively by nurserymen. The European sycamore was also mentioned as good for street planting, as were the silver maple, the Carolina poplar for narrow streets, the swamp chestnut oak as a shapely side tree, and for the extreme South the Magnolia grandiflora has no rival. There is no lack of material from which to draw in the matter of tree planting, but local environment must be the first and last consideration every time.

He said he recognized it is a hard matter, even in this day of progress and advancement, to inaugurate innovations, but in the matter of street shading everything possible should be done to agitate the subject and get the work started, and it would be found the ends would justify the means. He dwelt at great length upon the actual process of planting trees and of providing for the protection against boys and beasts.

The report of the secretary, Prof. Mackintosh, was read, showing the society in a strong condition financially, and having a considerable growth in membership during the past year.

The discussion of subjects interesting to the horticulturist and the agriculturalist were continued in the afternoon session. Papers were read by Prof. W. T. Clarke of Auburn on the "Relation of Entomology to the Horticulture of the State;" by D. C. Turnipseed of Flora on "Methods of Cultivating Orchards;" on "Selection," by A. J. Miller of Evergreen, and on "Our Canning Factory," by R. W. Barnes of Selma.

Of these papers, Mr. Turnipseed's was a treatment of the subject of planting orchards from a practical standpoint, and from his experience of the best means and methods of cultivation of an orchard.

The paper of Professor Clarke of Auburn was a more scientific treatment of the same subject, in which he gave much information to those among his auditors who were interested in the planting of orchards. In both papers the subjects of insect pests and diseases of trees and shrubs were treated exhaustively. Professor Duggar of Auburn made an interesting report of the committee appointed at the last meeting of the society for the investigation of the subject of forestry in the State.

AMERICAN ROSE SOCIETY.

The executive committee of the American Rose Society have been favored with more prizes for the coming Washington Show, one of \$25, for Killarney offered by ex-President Fred R. Newbold of Poughkeepsie and one of \$25, for Uncle John by L. A. Noe of Madison, N. J.

An addition to the schedule of the Washington Florists' Club is a prize of \$25 for a group of decorative plants covering at least one hundred square feet of floor space, offered by Wm. H. Ernest of Washington.

A special report of the Society's doings, with the Constitution and By-laws and a chapter on Garden Roses, of much interest to amateur growers embraced therein has been prepared, and the booklet is being mailed to all members of the Society, also a number of them to the general public.

BENJAMIN HAMMOND, Sec'y.

TORONTO GARDENERS' AND FLORISTS' ASSOCIATION.

At the regular meeting held Feb. 19 a large number of members were present, with A. Houle, the first vice-president, in the chair. T. Martin presented the report of his committee, who managed the hall at the recent carnation exhibition, and the secretary read a letter from the New York Florists' Club, tendering a hearty vote of thanks for the courtesies rendered its members while on their visit to this city; also one from J. Austin Shaw, expressing similar sentiments.

The secretary brought up the protest of the F. R. Pierson Co., and after a lot of discussion was instructed to procure for the March meeting samples of Excelsior and Dark Pink Enchantress, and the committee will then try to arrive at a definite decision.

Mr. E. Graham gave the members a very interesting half-hour talk on chrysanthemum growing, treating mostly of exhibition blooms, which he himself is very successful with.

Mr. F. Goode read a paper on the culture of grapes under glass, commercially, and predicted that the time was not far distant when it would be carried on on a very large scale in this vicinity to supply the fast increasing demand, and stated that at fifty cents per pound as an average, there was money in it. His paper was most thorough, and was much enjoyed by those present, a number of the members taking part in the discussion which followed. A hearty vote of thanks was tendered both gentlemen for their papers.

The next regular meeting, March 19, will be a social and ladies' night.

MADISON, WIS., HORTICULTURAL SOCIETY.

The Madison Horticultural Society, through its secretary, Emil T. Mische, offers the people of the city young plants for garden adornment free to those who pay the annual membership fee of \$1.00. It has been arranged that later in the season the daily papers are to print a series of articles prepared by experienced people, telling how to prepare the ground for planting, how to plant and how to care for the plants, also a series of illustrated articles showing the improvement possible by the use of these plants, and in the summer a public exhibition will be held in affiliation with the State Horticultural Society, where special prizes will be awarded for flowers grown on the plants distributed this spring. Prizes for improvement of grounds are also contemplated, for which classes have been designated as follows: 1. Greatest improvement of home estate, city lot size. 2. Most beautiful home, city lot size. 3. Most beautiful city block. 4. Most beautiful street. 5. Most meritorious improvement of any sort. Full specifications of the points to be considered in making awards in each class are given in the schedule copies of which may be had on application to Secretary E. T. Mische, City Hall, Madison, Wis. There are four different collections of plants, either of which may be selected by the applicant, each containing about one hundred plants of such things as asters, calendulas, marigolds, nasturtiums, zinnias, morning glories, cannas, dahlias, gladioli, delphiniums, gaillardias, etc.

ANNUAL DINNER OF THE NEW YORK FLORISTS' CLUB.

This annually recurring event took place at the Hotel St. Denis on Saturday night, February 24, according to established usage. Be it known that Saturday night is always selected because the next day is Sunday and after such a strenuous affair as the New York dinner a day of rest is expedient. The attendance was upwards of fifty and the chair was acceptably filled by president Totty and Patrick O'Mara was toastmaster. The decorations of the room were most elegant, among the donations for this purpose being orchids and orchid boutonniers from Lager & Hurrell, Alma Ward carnations from C. W. Ward, Welcome from Dailedouze Bros., Winsor in large quantity from F. R. Pierson Company and daffodils from John Young. Ex-president Walter F. Sheridan introduced toastmaster O'Mara after the substantial repast had been put out of sight. Mr. O'Mara's address was in that gentleman's best form, touching on the fine phases of the horticulturists' profession and counseling loyalty to the Club and to the National Society. In calling upon president Totty to speak for the club the toastmaster paid a fine tribute to that gentleman. Mr. Totty spoke briefly pledging his best efforts to the interests of the organization and its members. The toast to the S. A. F. was responded to by J. C. Vaughan, one of the ex-presidents of that society. He dilated on the wonderful development of the cut flower industry during the past twenty years and urged that an active interest be taken by New York florists in the National flower show projected for next year in Chicago. "Estate development and the private gardeners" was the topic next in order, responded to by Harry Turner who told of the great possibilities in garden development backed by unlimited funds and merited confidence in the gardener.

The star speaker of the evening, senator James F. Minton of New Jersey, was then introduced and made a most delightful address, replete with wit, sentiment and poetic historical lore. He characterized agriculture as the basis of the strength of the nation and enlarged on the delight of rural life, the attractions and beneficial influences of the suburban or country home, and the revivifying power of a life close to nature. The effect was inspiring and at the close the eloquent speaker was accorded a rising vote of thanks amid vociferous cheering. Later in the evening he held an informal reception each guest being presented to him in turn by his friend Mr. O'Mara.

Other topics and the speakers who discoursed wittily and instructively on them were as follows: Memories of the Florists' Club, by Walter F. Sheridan; The Work of the Horticultural Explorer, by John E. Lager; Exhibitions as Educators, by John Birnie; The Horticultural Press, by S. S. Butterfield, and The Ladies, by J. Austin Shaw.

Votes of thanks were accorded to the toastmaster and the donors of flowers. During the session music was discussed by a fine orchestra and there were songs by Mr. Wade, stories by Jack McDonald, Scotch songs in the vernacular by John Birnie and Robert

E. Berry and a German song in New Jersey style by R. M. Schultz. It was after 1 A. M. when the party broke up, all satisfied that the N. Y. club never had a more glorious time.

DOBBS FERRY HORTICULTURAL ASSOCIATION.

The regular meeting of this association was held in their room in Odd Fellows' Hall on February 23, Robert Boreham in the chair. The prizes for the best display of cut flowers were awarded to J. Bradley, gardener to H. Sidenburg, Hastings-on-Hudson, Claude Wilson, Dobbs Ferry, second. H. Kastberg, gardener to the Misses Masters also staged a fine collection and was awarded a cultural certificate for some very fine seedling amaryllises. H. Keiling, gardener to Mr. S. McComb, was awarded a cultural certificate for some of the finest roses it has been our pleasure to see. This proved to be one of the finest displays of cut flowers the association has had. Messrs. Jas. T. Scott, S. Bradley and W. Preston were the judges.

Mr. J. Bradley read a paper on the culture of cyclamens and was accorded a hearty vote of thanks. He staged some blooms of a handsome double flowered cyclamen. Jas. T. Scott told of the different methods used in the treatment of cyclamens which he had seen in his travels through the country and was very interesting and instructive. Foliage plants in not larger than 8 in. pots are the special subjects for the next exhibition.

ELBERON HORTICULTURAL SOCIETY.

The regular meeting of this society was held on February 18th with president Robertson in the chair and a large attendance. James Kennedy, superintendent for G. W. Young read a very interesting and instructive paper on outdoor roses.

The exhibition table was covered with cut flowers, and it was conceded by all that it was the finest display of flowers that has yet been staged at the meetings. The exhibitors were P. Murray with vase of freesia, Purity; W. D. Robertson, gardenias; A. Bauer, stocks, Beauty of Nice and Carnation Victory; A. Greib, violets Princess of Wales; H. Wood callas; F. Dettlinger, California violets; J. Kennedy, tulips Pottebaker yellow; E. Petzel, white carnations and W. Swain collection of cut flowers. W. Kennedy of Redbank showed a vase of a seedling carnation.

ROSE NIGHT AT PHILADELPHIA.

Mr. P. Joseph Lynch, secretary and treasurer of the Dingee and Conard Company, West Grove, Pa., will deliver a paper on "Rose Plants by Mail" at the next regular meeting of the Florists' Club of Philadelphia, to be held Tuesday evening, March 5, 1907, and in connection therewith it was decided to invite an exhibition of rose novelties on same evening. Those having meritorious novelties, if it is not possible to bring them personally, will please send them by express prepaid, care of Mr. David Rust, Horticultural Hall, Broad street, Philadelphia, time enough so that they will be sure to reach their destination before the meeting is called to order, so as to give all those interested ample opportunity to examine same thoroughly.

EDWIN LONSDALE.

ILLINOIS STATE FLORISTS' ASSOCIATION.

The second annual convention of this body took place at Bloomington on February 19th and 20th, about seventy-five members being in attendance. President J. F. Ammann called the meeting to order at 3 p. m. Wednesday, and H. H. Green made the address of welcome to the visitors. W. N. Rudd responded telling briefly of the enormous growth of the flower trade in recent years. The president's address followed. It was a business-like paper and was well received.

In the evening a banquet was tendered the Association by the Bloomington Florists' Club. W. N. Rudd acted as toastmaster. Addresses were made as follows:

The State Society and Its Object—S. E. Beal, Urbana.

Our Hoosier Neighbors—J. D. Carmody, Evansville, Ind.

The Sunny Side of the Florist's Business—Edward Gullett, Lincoln.

Trials of a Retailer—Albert T. Hey, Springfield.

Why Isn't a Florist as Good as Any Other Man—P. J. Foley, Chicago.

Florists' Clubs—P. J. Hauswirth, Chicago.

At the session on Wednesday morning an interesting and instructive program was presented. Prof. A. C. Beal, of the University of Illinois, spoke of the work in floriculture at the university. H. Hasselbing, of the University of Chicago, spoke on "The Effect of Light and Shade on Plants." W. N. Rudd told of some of the things that he had seen at the carnation show in Toronto, after which Prof. Blair, of the University of Illinois, spoke of the florist trade in Illinois and gave some figures as to its extent.

Officers were elected as follows: President, Albert T. Hey, Springfield; secretary, A. C. Beal, University of Illinois; treasurer, George A. Kuhl, Pekin; first vice-president, J. F. Ammann, Edwardsville; second do., Wilbur Gullett, Lincoln; third do., Charles Loveridge, Peoria; fourth do., William Heintz, Jacksonville; fifth do., August Poehlmann, Morton Grove; sixth do., H. Hasselbing, Chicago; seventh do., Dr. A. S. Halstead, Belleville.

The meeting was closed with an address by the president, in which he reviewed the present meeting and told of some of the things which he expected the association to accomplish in the future. Resolutions of sympathy were passed for the death of the first president of the association, the late James Hartshorne of Joliet. J. D. Carmody, of Evansville, Ind., was made an honorary member of the association. The next meeting will be held in Springfield.

The exhibition in connection with the meeting was also a great success. One of the most notable features was the large attendance during the evening when the show was open to the public, the hall being packed with people most of the time and the interest manifest in the florists' material being remarkable. The exhibits of cut flowers were exceptionally fine. Those who had exhibits were as follows:

Supplies—Bombayreed Manufacturing Company, Columbia, S. C.; Foley Manufacturing Company, Chicago; Hummel & Downing, Milwaukee; M. Rice & Co., Philadelphia; A. L. Ran-

Dorner & Sons, Lafayette, Ind.; Chicago Carnation Co., Joliet; Bauer & Smith, Indianapolis, Ind.; Brant & Noe, Chicago.

NASSAU COUNTY HORTICULTURAL SOCIETY.

There was a large attendance of members at the monthly meeting on February 23, and seven new names were nominated for active membership. The special prize for twelve carnations arranged for effect was won by Valentine Cleves. In the "point" competition Wm. Eccles received 85 with Lawson carnation, Thos. Harrison 84 with Phoenix Roebelini, A. MacKenzie 84 with mignonette, A. Jarache 79 with lily of the valley and H. Metz 76 with double violets. Felix Mense was awarded the Society's certificate for Princess of Wales violet. A large collection of carnations was staged by Chas. Bertanzel for which he received honorable mention.

A. Jarache gave an interesting talk on Phoenix Roebelini. F. R. Pierson Co. of Tarrytown have offered a \$25.00 silver cup for best 25 Winsor carnations to be competed for at the coming fall exhibition. J. Ingram, S. J. Treppess and J. Everitt are the judges at the monthly exhibition.

DETROIT FLORIST CLUB.

This club for once abstained from its learned discussions and devoted meeting night to a social and dance. Thanks to the efficiency of the entertainment committee, whose general is Wm. B. Brown, the affair was a great success and immensely enjoyed by all. Music, recitations, card playing and dancing kept old and young until long past midnight.

CLUB AND SOCIETY NOTES.

Mrs. H. B. Fullerton gave an illustrated lecture on "Beauty and Utility in the Home Plot" before the American Institute of New York on February 27.

J. Ivera Donlan entertained the Tarrytown (N. Y.) Horticultural Society on Tuesday evening, February 26, with a talk on the artistic arrangement of flowers and plants.

The Tri-City Florists' Association met with Wm. Knees of Moline, Ia., on

February 14. After a discussion on the care of hot beds, Messrs. Arp of Davenport, Steep of Rock Island and Knees of Moline were appointed a committee to arrange for the annual banquet in March.

The next regular monthly meeting of the Washington Florists' Club and their annual election of officers takes place on March 5th, at 8 P. M., at Gudes' Hall, 1214 T St., N. W., where we will be very glad to see any of our out of town brother tradesmen who happen to be in Washington at that time.

The Western Horticultural Society held a meeting at Winnipeg, Man., on February 12, with interesting papers and discussions. The attendance was small but it is hoped by working through the schools an interest in horticulture may be developed and maintained.

The lectures at Horticultural Hall, Boston, for the remainder of the season will be "Planting for Streets and Waysides," by J. A. Pettigrew, on March 2; "Some Bacterial Diseases of Plants, Their Nature and Treatment," by Prof. H. H. Whetzel, on March 9; "Gardens of Italy," by J. K. M. L. Farquhar, on March 30.

A committee of the Illinois Florists' Association composed of J. F. Ammann, P. J. Hauswirth and J. C. Vaughan, and Prof. A. C. Beal were in Springfield recently in the interests of a bill calling for an appropriation of \$10,000 for the investigation of insects and diseases affecting hothouse plants, at the experiment station.

OBITUARY.

Ferdinand Tschupp.

Ferdinand Tschupp died at his residence in North Bergen, N. J., on February 24, aged 66 years. Mr. Tschupp was born in Alsace (Germany). On first coming to this country, in 1863, he worked for his brother, the late John Tschupp of Weavertown Road, West Hoboken, for about one year, after which he spent about four years in the employ of Mr. Hauser, an old-time florist on Third Avenue, New York. He then went to North Bergen and started in business for himself, at first in a small way, adding to his place as his means increased and making a pronounced success from the beginning. He acquired extensive real estate interests in his adopted town where he was prominent in Masonic circles and served as treasurer of Palisades Lodge for the past fourteen years. His specialty was hybrid perpetual roses and his Jacq's grown in the old-fashioned way have enjoyed a wide reputation in New York markets.

Mr. Tschupp is universally spoken of as one of the most conscientious, industrious, and unassuming men connected with the horticultural profession, a man of highest integrity, a reliable friend, and a good father to

his family. He leaves a wife and six children—three sons and three daughters—all married except two.

Charles Zarembo.

Charles Zarembo, aged 68 years, for many years a resident of Church Lane, New Durham, North Bergen, died suddenly on February 18. He had been about the house when he was suddenly attacked and expired before a doctor arrived. While his death was unexpected, he had been under the care of a physician for heart trouble for some time. The funeral took place on Thursday, February 21. Mr. Zarembo was a Russian by birth. He was engaged in the florist business in Church Lane for 35 years, his specialty being chrysanthemums and geraniums.

C. F. W. Gentemann.

C. F. W. Gentemann of Quincy, Ill., died on February 16 at Miami, Fla., where he has been accustomed to pass his winters for his health. Mr. Gentemann was born in Germany on March 15, 1837, and has resided in Quincy since 1852. He established there a successful business which he turned over to his sons Herman and Philip, and daughter Minnie, five years ago. Besides these another daughter and his wife survive him. Mr. Gentemann has been a member of the Society of American Florists for many years.

Other Deaths.

J. C. Good of Tiffin, O., died on January 29 at the age of 57.

The wife of W. P. Peirce of New Bedford, Mass., died on February 25.

John Casey, for the last 25 years gardener for the late A. J. Cassatt, died at Haverford, Pa., on February 21, aged 70.

Wm. A. Bruce formerly employed in the seed store of Peter Henderson & Co., and with J. M. Thorburn & Co., died in Jersey City, N. J., on February 12.

Mrs. Nicholson, wife of W. R. Nicholson of Framingham, Mass., died on February 18. The marriage of these young people took place only about a year ago and much sympathy is felt for Mr. Nicholson in his sad bereavement.

A CORRECTION.

Several communications in this issue which have the appearance of being somewhat tardy are so because they failed to connect with last week's issue which went to press one day ahead of regular time on account of the holiday, February 22. One result of the unavoidable haste thus caused was a number of inaccuracies which escaped the proofreader's eye, including a misplaced signature whereby the excellent notes on rose propagation were wrongly credited to J. F. Johnston instead of to their author, J. E. Simpson.

Nature's Two Unique and Wonderful "New Creations" in Bush Limas!

Nature has surely surpassed herself! In a single season she has outstripped all efforts of man. In fact, such distinct new types have never even been dreamed of before.

Look at the illustrations shown of the BURPEE-IMPROVED and FORDHOOK BUSH LIMAS, recall to mind the largest and best pods of Lima Beans you have ever seen, and you must agree with us that this is a **most remarkable find**. To learn just what they really are and how they were discovered, kindly study *pages 10 to 15 of THE FARM ANNUAL FOR 1907*. These two most unique new Bush Limas will be worth many thousands of dollars annually to the gardeners of America. They are undoubtedly the "*Greatest Novelties of the Age*."

The Burpee-Improved is an entirely "New Creation." The pods are truly enormous in size, borne in great abundance upon bushes two and one-half feet high by two feet across. The beans are both larger and thicker than those of the popular *Burpee's Bush Lima* or any strain of the large White Pole Lima.

Fordhook Bush Lima This is altogether unique.

Nothing like it has ever been seen before. It is the first and *only* stiffly erect Bush form of the fat "Potato Lima." Both pods and beans are twice the size of *Dreer's* and more than half again as large as the *Challenger Pole Lima*.

\$1115.00 in Cash Prizes for 1907

With one prize of \$150.00, several of \$50.00 each, we will pay a total of \$1115.00 on these **Two New Bush Limas**. For particulars, see *page 28 and page 199 of BURPEE'S FARM ANNUAL FOR 1907*.

These Bush Limas are sold only in sealed packets.

Each packet contains twelve perfect hand-picked beans. **Per pkt, 25 cts.—less the discount of one third on Retail Packets,—making 3 pkts. for 50 cts.; 6 pkts. for \$1.00, or \$2.00 per dozen pkts., postpaid and assorted as desired.**

NEW "FORDHOOK" BUSH
LIMA,—Life-Size Pod.

BURPEE'S FARM ANNUAL FOR 1907 "The Leading American Seed Catalog."

The "*Silent Salesman*" of the world's largest mail order seed trade. An Elegant New Book of **200 pages** with hundreds of illustrations from photographs, it tells only the plain truth about the very best **SEEDS THAT GROW**.

It describes Grand Novelties in Flowers and Vegetables, of unusual importance, which cannot be obtained elsewhere. If interested, write to day,—name HORTICULTURE,—and the book is yours.

BURPEE'S NEW "BLUE LIST"

Most complete of all wholesale catalogs of seeds, gives Special Prices to Florists and Market Gardeners. If you have not received a copy, **Write To-day**.

With our usual discount of 33 1/3 % on Retail Packets, Florists and Market Gardeners (who order *early*!) can obtain THESE TWO NEW BUSH LIMAS at the rate of any **3 pkts. for 50 cts.; 6 pkts. for \$1.00; or 12 pkts. for \$2.00**, assorted as desired, and sent by mail, postpaid.

BURPEE-IMPROVED BUSH LIMA,—
Life-Size Pod.

SEED TRADE

The Canners' Convention of 1907 has passed into history, and in point of attendance—fully 2500 persons including ladies being present—the machinery and other exhibits, also the social and entertainment features, it easily surpasses any previous convention.

Each succeeding convention seems to excel the preceding one and it is not safe to say when the limit will be reached, though several times during the past week prominent members of the canners and machinery men's association were heard to say it was becoming so large as to be unwieldy. It has not got out of hand yet, however, as the excellent management of the one just closed amply demonstrates. But for one unfortunate incident just at the close which may be passed over without further comment, everything was worked out smoothly according to program, and the local committee which had immediate charge deserve generous praise.

Dr. Wiley, chief of the bureau of chemistry of the Department of Agriculture, and designated by Sec'y Wilson as head of the commission appointed by him to supervise enforcement of the national pure food law, was present as a guest of the convention, and discussed in a clear and entertaining manner, the regulations worked out by his committee. The Dr. had an attentive and interested audience, and was deeply gratified to find the packers as a body so ready and willing to co-operate with him. It certainly is pleasing to note the readiness and in fact the eagerness of the leading packers to comply with the requirements of this law. All express warm approval of its principles, even though they may criticize some of its details because they consider them unworkable. However, when all parties approach a question in a spirit of honesty and fairness, there is seldom a failure to reach an agreement mutually satisfactory.

An informal vote as to the place for the next convention was taken, and Denver received the largest number of votes. This is simply a straw however, and does not necessarily mean that Denver will be chosen.

The inquiry for spot seed peas was less active than many expected, and as it was mainly for the sweet or wrinkled sorts, which are scarcely procurable at any price, but little business was done.

Two important causes have combined to save the situation for the canners in the matter of canned peas another year. One is the difficulty of securing seed of the right varieties and the other of getting viners. If viners were easily procurable and seed abundant, the market would beyond doubt be glutted much as it is at the present time with canned corn. There has been quite an active demand for tomato seed, but only a moderate demand for corn.

The seed trade furnished the usual number of curb brokers at the convention and there was the usual criticism from the members of the machinery and supply men's association, who practically demand that those seedsmen who are members of the association should move against their competitors who are not, but who persist in hanging around like camp followers, attending banquets, theatres, and in fact any function furnished by the association which costs them nothing, and dead-heading everywhere. This is all the more annoying to seedsmen who are members of the association, as only those in their line of business are guilty of dead-heading.

It would seem that if these persons had any pride or sense of propriety they would join the association or remain away.

The board of general appraisers at New York have reaffirmed previous rulings based upon the decision of the Circuit Court of Appeals, that duty must be paid upon onions on the basis of a standard weight of 57 pounds per bushel.

It is reported that a Rochester seed firm has leased about ninety acres of the Aughter farm in South Greece, N. Y., and a third of the land will be planted to asters. The erection of greenhouses will follow. James E. Gott has been appointed foreman.

James B. Kidd has been appointed examiner of plants, seeds, bulbs, etc., at the port of New York. Every importer of such goods—in fact everybody engaged in commercial horticulture throughout the United States will be more than pleased over this wise appointment. Mr. Kidd assumes his new duties on March 1 with the sincere congratulations of a host of friends who appreciate his eminent fitness for the work.

PERSONAL.

Edward Davies, formerly on the E. D. Jordan estate at Chiltonville, has taken a position with the Model Farm Greenhouses, Dalton, Mass.

Mr. Gaul of the Battles force, Philadelphia, is laid up with typhoid. Mr. Faust of Pennock's is progressing favorably. Much typhoid in Philadelphia at present.

T. E. Brittingham, one of whose public gifts is Brittingham Park, now under construction, has been appointed a commissioner of Forest Hill Cemetery, Madison, Wis.

W. H. Ellsworth, for thirteen years chief gardener of the Omaha (Neb.) park systems, is reported to have accepted a similar position at the Battle Mountain sanitarium, Hot Springs, S. D.

Prof. A. F. Burgess, inspector of orchards and nurseries for the State of Ohio, has resigned to take charge of the Massachusetts state experiments in the gypsy and brown-tail moth campaign.

Visitors in Boston: V. De Rudder, Ghent, Belgium; H. R. Mitchell, Waterville, Me.; Charles Loechner and S. Tokuda, of Yokohama Nursery Co., New York; Julius Roehrs, Jr., Rutherford, N. J.; M. H. Walsh, Woods Hole, Mass.

Arthur Urquhart, recently at Forest Hills Cemetery greenhouses, Boston, has taken a position to commence in second week of March at the Mt. Desert Nurseries, Bar Harbor. This resulted from a "Want Ad." in HORTICULTURE.

M. H. Norton has accepted a position as representative on the road for F. W. Kelsey of New York in eastern New England territory. Mr. Norton has a wide acquaintance among the proprietors and gardeners in the many large estates on the north and south shore and starts on his duties with excellent prospects.

NEWS NOTES.

Karl Voight, 389 Eighteenth avenue, Newark, N. J., suffered loss by fire on February 23.

Albert Klitz has purchased the business of M. Fink at 2211 Cottage Grove avenue, Chicago.

Nelson France and Walter Vandegrift have purchased the greenhouses of Dr. Baker, Monroe, Mich.

A greenhouse belonging to Thomas Wanck, at Woodhaven, N. Y., was destroyed by fire on February 14.

A part of the roof of the large greenhouse of E. C. Prizer, Collegeville, Pa., collapsed recently under the weight of snow.

J. J. Waaland has purchased the stock of S. M. Hartman of Van Buren, and transferred it to his establishment in Findlay, O.

Fred Lord of the Lord & Burnham Company visited Elmira a few days ago and drew a prize in the shape of an order for the material complete for a range of eighteen greenhouses each 21.9x100 for the United States Cut Flower Company.

The South Bend Floral Co., South Bend, Ind., is equipping their retail establishment with all the modern improvements in the way of refrigerators, plate glass cases, etc. Walter Tapper has taken charge of the conservatories at 804 E. Duball avenue.

At last accounts the benefit fund for the family of the late James Hartsorne amounted to \$1,300.00. It is hoped that this will continue to grow. P. J. Hauswirth, 13 Congress St., Chicago, who has the matter in charge will receive contributions.

The hearing on the proposed legislation against lap seam boilers took place at the State House, Boston, on February 12, before the committee on mercantile affairs. It developed that there are no less than fifteen bills relative to boiler inspection and the licen-

sing of firemen. A large delegation of prominent growers in the vicinity of Boston was present as well as many representatives of the labor element, boiler makers, engineers, etc. The two latter interests developed a mutual disdain for one another and came close to a clash as they argued on the proper qualifications of a boiler inspector, and the present inspectors took a shy at the unfitness of both. The florists and market gardeners did not get much opportunity to express their views up to the time of adjournment, but it is understood that a compromise satisfactory to them has been partly arranged, and that the obnoxious clause compelling the employment of licensed firemen for agricultural and horticultural boilers is to be stricken out by the authors of the bill. The hearing adjourned till February 26, when the inspection question occupied the time fully and the licensed firemen proposition is to come up on March 6.

NOW!

This is "last call" for advertisements in **THIRD ANNUAL ROSE NUMBER**. Copy should be mailed **AT ONCE**, as we go to press on March 7.

Cut Flower Market Reports

BOSTON Business is very sluggish this week in and around the Hub. Flowers are coming in plentifully and are heaped up on all sides with very poor prospects of finding a market. In fact, the long-expected slump has arrived and the market has been under the influence for the past three days. Roses, carnations, violets and bulbous material are all in the same boat. Violets have been sold as low as \$1.00 a thousand and everything else in proportion.

BUFFALO Business the past week has been on the quiet; the weather was favorable but the supply exceeded the demand. Bulbous stock, especially tulips, daffodils, lily of the valley, narcissi, etc., were over-flowing and prices were exceptionally low. Carnations also very plentiful, the best in demand being Enchantress. Colored carnations too plentiful to hold prices, a good many were on the bargain counter and were hardly moved at any price. Roses have held firm. Some good quality Bridesmaids, La Detroit and Killarney were had and have sold rapidly. Lilies have not been too plentiful and prices are holding well. Violets are coming in heavier and prices dropping considerable. It may be said that "Lenten glut" has finally overtaken us and we are at the mercy of the buyers. Green goods in normal supply.

COLUMBUS Another fine week of trade. Stock is coming along very fast; in fact, if things keep on as now, prices will surely have to give way. The writer was sorry to note the arrival of the first street fakir, with carnations; this is always a signal for the cutting of rates—and prices have been maintained, so far this season, on such a good paying basis that it seems hard that they must now be ruthlessly broken. Plans for Easter are being discussed by all, and the outlook now fortells a great business. Every branch of the business has never been in better shape than it is right now.

DETROIT The dullness of Lent is heavily felt in the local market. Carnations and violets are in plentiful supply but roses are still scarce. Bulb stock is a drag principally because some wholesale grower has bought an enormous quantity of Dutch bulbs, overestimating the digestive ability of the local market for this class of goods.

INDIANAPOLIS Trade has been all that the most enthusiastic could desire the past week. Flowers are no longer scarce. The rose supply has been increased by a few bright days. Prices are still unreasonably high in

some lines considering the quality offered. American Beauty supply is still inadequate for any continuance of live trading. The demand for spring flowers and flowering plants is constantly increasing and is leading to a falling off in the call for roses and carnations. In summing up, trade can be said to be in excellent condition notwithstanding the opening of the Lenten season which seems to have had less effect on trade than heretofore. Stock looks very promising for Easter, the local growers say.

NEW YORK The deluge has been temporarily retarded by the severe wintry conditions of the past week and neither surplus nor prices weakening have gone to the extremes that might have been reached under normal conditions. Nevertheless the market is distinctly lower especially on bulbous flowers, violets and carnations. Roses of the higher grades are still hanging on in the top branches but a surplus of the cheaper quality may easily be discerned without the use of a spyglass.

PHILADELPHIA What we want now is warmer weather. Business is very slow. Roses are more plentiful and there has been a considerable drop in prices; but the cheaper grades of whites are scarce. There are no good Beauties around yet, but Richmond is in fine shape. The carnation market fell away considerably especially on the fancy grades. Medium whites are most in demand. All other stock plentiful—sweet peas, violets, lily of the valley, bulbous flowers, everything—with possibly the exception of cattleyas; they are quite scarce. HORTICULTURE shouldn't talk so much about orchids. It cleans up the market too close.

TWIN CITIES The trade in general appears to be satisfied with results of the past week's business. Notwithstanding that Lent is now on, business seems to keep up remarkably well and stock is coming in nicely. A matter of two weeks ago this market was in a bad way for its supply of carnations. We are now cutting a sufficient number of good blooms. With all growers roses are in crop, and the sunshine of the past week has brought out some specimen blooms, especially of Mme. Chatenay, Richmond and Moulton. One of our largest growers has been favored with some of the finest Kil-

The New "Market" ..Opening Announcement..

Mr. Messrs. Berger Bros., beg to announce the opening of their new store at 1305 Filbert St., (the old Dumont place), where they will be pleased to greet their old friends and customers, and extend to them the courtesies and facilities of an up-to-date commission house. They also wish new connections—both in buying and selling—and respectfully solicit a visit or enquiry. Their motto:

"Good service and a square deal all round."

Try the New "MARKET"

BERGER BROS., Wholesale Florists
1305 Filbert Street, **PHILADELPHIA**

larnays ever seen on this market. Princess of Wales violet, as shown by one of our growers, is indeed hard to beat; they have stems fully 12 inches long and the blooms are perfect. The market on bulb stock is in a bad way; while the demand is good, there appears to be an over supply, and tulips especially have suffered. Some very fine Yellow Prince were sold at \$1.00 per 100. Easter stock looks indeed promising; lilies are much better than last year, no doubt partially due to the fact that a better grade of bulbs was purchased. Azaleas are beginning to show buds, and with some are already in cool houses. Hydrangeas and spireas are good in general; the latter, however, is not grown so extensively for Easter as in previous years. There is a noticeable increase in Primula obconica, and the plants are far superior to those of previous seasons.

WASHINGTON One of the coldest waves of the winter struck Washington Friday, but seemed in no way to affect the stores, as but little vacant space is seen. Trade is brisk, and prices are still high owing to a scarcity of flowers. There was a rather large shipment of carnations into the District on Saturday, which caused a slight stagnation in the market. Notwithstanding an abundance of sunshine, home-grown flowers continue scarce and high. Lilac is the best seller at present. Good azaleas at reasonable prices are abundant but not in much demand. Bulbous stock is not so plentiful, as most growers are retaining the greater part of their supply for Easter. Lenten dinners among the society people are affording the retailers considerable decorative work.

BUSINESS CHANGES.

Charles D. Offerle of Warren has purchased the retail florist business of Verne Schluraff on State street, Erie, Pa. Mr. Schluraff intends to devote himself to growing for the wholesale market in the vicinity of Erie.

SOUTHERN WILD SMILAX

We are booking orders now for future delivery for Fancy Greens and Beaven's Fadeless Sheet Moss. Write for Samples.

will hear of something advantageous by
addressing Jans Schmidt, care of HORTI-
CULTURE, 11 Hamilton Place, Boston.

**Is Your Name In The Above
List? If Not, Why Not?**

Promptness and Good Workmanship

The above combined with personal attention to all work, and the fact that I have in my employ men especially selected for their proficiency in greenhouse heating and building assures you of the best results possible for the amount of money expended.

Private gardeners and commercial florists in all parts of the country for whom I have installed work will verify the above. (Send for list).

IS YOUR HEATING PLANT IN ORDER FOR THE COMING WINTER?
IF NOT CAN SEND YOU COMPETENT MECHANICS AT ONCE.

Everything for Heating and Ventilating, Grates,
Smoke Boxes, Etc.

SOME RECENTLY INVENTED APPLIANCES

IMPROVEMENTS IN ROOF CONSTRUCTION.

Herman Thaden of Atlanta, Ga., has obtained a patent on the improvement in roof construction indicated in the accompanying illustration. Fig. 1 is a perspective view of a skeleton roof embodying the invention. Fig. 2 is a view, partly in vertical section and

partly the side elevation, of the means for attaching to the ridge of the roof structure. Mr. Thaden claims in this invention the following:

In a roof structure, a ridge, wall plates spaced upon opposite sides of the ridge, rafters extending from the plates to the ridge, truss-rods running from the wall plates in reversely-inclined upward directions, and approaching near the rafters at their lower ends, a block yieldingly secured to the ridge, and connecting the truss-rods and ridge and arranged to equalize the strain upon the truss-rods, and purlins carried upon the truss-rods and positioned to support the rafters intermediate their ends.

FLORISTS' PLANT STAND.

We reproduce herewith photographs showing front and rear view of a plant stand, which is sent to us by the George Wittbold Company.

The stands are very light, made of galvanized iron, and they can be used as a vase. They telescope, so that a great many stands will take no more room than one. Mr. Wittbold, who does probably the largest amount of

decorating of this kind in Chicago, states that he has found it to be very valuable in his work.

A SERVICEABLE GREENHOUSE BRACKET.

The "Economy Bracket," of which a picture is here shown, seems to present the maximum of convenience, strength and beauty with the minimum of obstruction and expense. Its value as space saver, a convenience for the accommodation of shelves for

(Showing Method of Fastening.)

seedlings, etc., and for raising things toward the light when desired, will be apparent to every greenhouse man without further explanation. It is recommended by Patten & Co., F. H. Kramer, S. J. Goddard and other well-known growers. See advertisement of Buxton & Allard in this issue.

TO OUR READERS.

You will confer upon us a special favor if you will scan the advertisements, as they appear from week to week, and favor with your patronage the firms there represented whenever you possibly can. A reference to HORTICULTURE when sending for goods will be a kind and thoughtful courtesy, which will be of far reaching benefit to us, and will, as such be deeply appreciated.

BETWEEN YOU AND ME, What do you think of the Buyers' Directory and Ready Reference Guide of HORTICULTURE? Cent a word! Cheap and Efficient Advertising, I call it.

"HORICUM"

TRADE MARK

San Jose Scale on a Pear.

HAMMOND'S SLUG SHOT WORKS.

"HORICUM" A Scale Killer and Fungicide

A preparation for the destruction of the "SAN JOSE SCALE"; carefully prepared and put up in packages for general use.

"HORICUM" can be obtained from many of the Seedsmen in the United States. A description of the article is aptly told in the pamphlet. It is put up in quarts and gallons to 50 gallon barrels. It is the Lime, Sulphur, and Salt combination, concentrated.

ABOUT "HORICUM"

Glenside, Pa., March 31, 1906.

Hammond's Slug Shot Works, Fishkill-on-Hudson, N. Y.

Gentlemen: Seeing "Horicum" mentioned in Monthly Bulletin of Div. of Zoology, Penna., I would thank you to inform me where I can get a supply, say about a gallon, for trial. The San Jose Scale is very bad around this section and could no doubt push sale of the solution, especially as it is spoken of so highly in the above mentioned Bulletin.

P. S. Glenside is twelve miles from Philadelphia.

Yours respectfully, H. J. HINDS.

Kills San Jose.

The Unconsidered Trifles

of a few years ago form the basis of profit or loss today. Keen competition has brought things down to this fine point. Brought it to a point where yearly repair costs on the ordinary houses keep a man up to his ears all the time. If you haven't enough money to buy one of our "houses of economy"—then don't build—wait till you can—you will be money in hand in the end. Keep your eye on what we are doing for others, then you'll know exactly what we can do for you. Write us.

HITCHINGS AND CO.

GREENHOUSE DESIGNERS AND BUILDERS.

Manufacturers of Heating and Ventilating Apparatus.

1170 Broadway,

NEW YORK.

FOR SHALLOW CELLARS

requiring low flow pipe connections we have made our 18 and 30 Series with socket connections on either side for caulked joints. The height to center of flow pipe outlet on the 18 is 48 inches; on the 30 it is 61 inches. Here is an up-to-date boiler that has connections in the same place as the older pattern greenhouse boiler and will slip right in its place and fit on existing connections, which is certainly an economical consideration.

FOR SALE: Every part or any part for good greenhouses.

KILLARNEY

THE FAMOUS IRISH HYBRID TEA ROSE

The Greatest Pink Rose For Forcing Purposes In Existence.

It makes a strong upright bush, with beautiful, deep bronzy green foliage. It is wonderfully free blooming, bearing its large, long, pointed buds and massive flowers on long, stiff, heavy shoots; in color it is an exquisite shade of deep, brilliant, sparkling shell pink; flowers of enormous size, with thick petals of great substance and delightful tea fragrance. It is the greatest pink rose in existence for forcing and finest of all roses for out door culture. It is perfectly hardy, a constant bloomer, and one of the World's great New Roses. We have the largest stock of this variety in America, all on own roots. The demand is great, and stock is moving rapidly. Let us have your order to day.

Price, 2½ inch pot plants, \$8.00 per 100; 3-inch pot plants, \$12.00 per 100; 4-inch pot plants, fine strong two-year-olds, \$25.00 per 100.

We have also in stock upwards of 1000 different varieties of Roses of various sizes, including all the new and popular varieties as well as old stand-bys. Send for

RAWSON'S SPECIALTIES

Are Novelties of Superior Merit

Now that we give our entire attention to the

HIGHEST GRADE SEEDS, BULBS and PLANTS

We shall endeavor at all times to be the first in the field to offer meritorious novelties introduced in Europe and America.

We offer now the **latest European Novelty of importance** for delivery in April, 1907

ROSE CHARLOTTE KLEMM (H.P.)

(RED FRAU KARL DRUSCHKI)

(Offered for the first time in America by W.W.Rawson & Co. only)

Description:—This new variety is the result of crossing "Alfred Colomb" (H.P.) with "Cramoisi-Superieur" (Bengal), and will in short time outrival any of the late introductions in Hybrid Perpetuals. Its color is distinct in its class. Rose growers of Europe are at loss to describe it properly in order to let the reader imagine the richness of color. The introducer calls it: Bright **glowing** crimson; this might come nearest to it. The shade has no equal among roses. The flowers are all quite large, loosely filled and extremely double. Foliage is luxuriant the entire season and is seldom troubled with mildew or rust, not even in unfavorable weather. Most flowers are borne singly and are the first and last on the scene. It has all the qualities to make it one of the most popular Garden Roses in existence.

PRICE: Extra Strong Plants, \$2.50 each

As the quantity is limited and we desire to place this novelty in as many hands as possible, we shall supply not more than two plants to any one customer.

IMPORTANT NOTICE

The entire Stock for 1907 of our newly introduced

"Gladiolus Harvard"

is now sold and we regret to say we are unable to accept any further orders.

HEADQUARTERS FOR

Rare and Choice Dahlias

We offer over Four Hundred of the choicest varieties of this popular flower and shall be pleased to mail free of charge our complete catalogue with full descriptions and illustrations.

We list nearly twenty of the rarest kinds, which cannot be duplicated from any other source in the country.

A WORD ABOUT

Rawson's Seeds

The following testimonial received only a short time ago is ample proof of the "High Quality Seeds" we furnish:

Elizabeth, N. J., Jan. 28, 1907

Gentlemen:

We are much pleased to say that the seeds we received from you have proved to be of very good quality. It was the last lot of seeds we put in, but they have germinated fine and will be ahead of the others nevertheless.

We are today mailing you another order for seeds.

Respectfully Yours

(Signed) THE ELIZABETH NURSERY CO.

We issue the following catalogues, which we shall be glad to mail free of charge:

Rawson's Garden Manual for 1907, the most elaborate catalogue published this year.

Rawson's Wholesale Florist Price List. This is mailed to the trade only and contains everything in Flower seeds and Bulbs.

Rawson's Special Price List for Market Gardeners. This again is for the trade only and contains all vegetables, particularly our own strains, for which we have become world famous.

W. W. RAWSON & CO.

5 Union Street, Boston, Mass.

White Killarney

This handsome sport from the popular Killarney promises to take high rank among the useful commercial roses for cut flower use as well as for hardy garden planting. The sport originated at Waban Rose Conservatories, Natick, Mass., and Mr. Montgomery will

propagate it and offer it to the trade in due time. The flower is white, with a faint tinge of creamy blush in the heart of the bud. It is a heavier and more double flower than the parent variety and is very fragrant. It will be useful both winter and summer.

The Sunlight Problem

Owing to the unusually long continued dark weather which we have experienced during the present winter, the importance of the sunlight problem, which is always of great interest to rose growers, has been forcibly impressed upon us. Now is the time when all our bug-bears rise before us, wide houses vs. narrow, steep vs. flat, ridge and furrow vs. separate, and so on through all the list.

Theoretically, of course, the problem is very simple. All you have to do is to pitch your roof so that it will catch the largest number of rays of light during the shortest days, and there you are, nothing left for you to do but produce the goods. Unfortunately, this plan at the present day doesn't work out well in practice and we are compelled by the high cost of materials and labor to seek another course.

The question as it appears to me then is this; in order to secure cheap construction, what per cent. of the total possible sunlight can we sacrifice without lowering the per cent. of profit on our investments? So far, the solution of this problem has seemed to be an almost hopeless task, but if I may judge from what I have seen recently, should say that the near future ought to produce some sunlight facts which will remove us from the realm of the "rule of the thumb."

For some time past Dr. Geo. E. Stone, of the Massachusetts Experiment Station, has been conducting a large number of sunlight tests by an original and very ingenious chemical determination. His method has proven very accurate in practice and the data which he has compiled will, I firmly believe, go far to settle the question for the grower as to what is the best type of house suited to his particular requirements. Dr. Stone has promised to publish the results of his investigations and I am sure they will prove interesting, not only to the grower, but also to the horticultural building companies as well; for, these latter have not yet such a monopoly of all building knowledge as some of their advertisements, with the catchy phrases, would lead us to believe.

During the month of February, under the direction of Dr. Stone, I was enabled to make a few light tests, and the results of at least two of them have a practical bearing. No doubt we have all heard the old story of the light being stronger directly beneath the glass than it is at any considerable distance from it. When wide houses were first built the cry was that the light must be weak so far from the glass. Well, possibly it may be and the thing for us to do is to find out, if such be the case, what is the limit of width for a house. Certainly it is not forty feet, for I have found with the method mentioned above, and it is a very sensitive light test, that there is absolutely no difference in the intensity of the light over the back bed and the front bed, when the rays enter from the south side of the house (that is to say, before the sun has crossed the ridge.) This of course does not settle the question but I am convinced that, as far as loss of light is concerned, we will have to go considerably beyond forty feet to find it.

One other thing which I have determined is that we cannot always tell by the "looks" of a house exactly how much sunlight a particular form of construction will admit. For example: I was particularly anxious to test the difference between glass sixteen inches wide and twenty-four inches wide, in standard iron frame houses with the conventional rafters, one having the sash bars spaced sixteen inches apart and the other twenty-four inches. I was, however, unable to do so, and for this reason: the rafters in the house with the twenty-four

inch glass were five inches in depth, whereas those in the one with sixteen inch glass were only four inches. From all appearances, as far as the eye could judge, the wide glass certainly looked the lighter, but, nevertheless, by actual tests, reckoning the out-of-doors light at one hundred per cent., the four inch rafter and sixteen inch glass gave eighty per cent. of possible light, while the five inch rafter and twenty-four inch glass gave seventy-five per cent. While in this case I did not find out what I started to do, I did learn that, with the facts obtained, it does not take an expert at juggling figures to discover readily what the limit in depth of rafters ought to be for an iron frame house.

As the old saying goes, "Facts are stubborn things," but it is to these we must stick if we would solve the problems which confront us.

Alex. Montgomery, Jr.

Chrysanthemum Notes

At this season of the year, every lover of the chrysanthemum is turning over his stock, sifting out varieties that are superseded by more promising rivals, weighing many old favorites in the balance, and if found wanting, reluctantly perhaps, consigning them to oblivion, few having room for sentiment in the growing of this popular flower.

But it seems a pity that some, at least of the smaller varieties should not be continued in cultivation, for many of them are beautiful in color and form, though not up to the required standard in size, and the time will come when beauty will be a greater consideration than size, for every purpose, excepting perhaps the exhibition table, and properly so, for comparatively few have the privilege of attending exhibitions, while hosts of people enjoy a few flowers in their homes.

Commercial chrysanthemums should embrace flowers grown in every style, to suit the individual fancies of the flower buyers. Large blooms for those who care for them, dainty natural grown sprays for the purely aesthetic tastes, and singles and pompons for the poorer classes, who are unable to purchase the large individual blooms, and which are also more suitable for the surroundings for which they are intended, and often among this class we see flowers appreciated and cared for until the last vestige of life remains, and these go far to engender that love for flowers that is most desirable and of inestimable importance to the florist who grows them.

Grown naturally without disbudding, chrysanthemums could be sold at a price which would place them within the reach of thousands who are unable at the present prices to enjoy such a luxury, thereby adding impetus to the sale of such flowers, and consequently bringing increased revenue to the man who grows them.

A naturally grown chrysanthemum plant is most serviceable for decorative purposes, and makes a grand show, giving good value for the money invested. This should impress the consideration of the private gardener. Many of the single varieties are particularly well adapted for this kind of work, and as they are yearly becoming more popular, a great future is in store for them.

Alfred J. Lovelace.

The Mail Order Trade

EXISTING CONDITIONS AND DEFECTS.

When Abraham Lincoln expressed the opinion that "you can fool some of the people all the time, and all of the people some of the time, but you can't fool all the people all the time," it seems to have been an admonition to the mail order florist, who in many instances, however, has not placed much credence in this trite but homely piece of advice. There has never been a time in our up-building when we have had such a period of prosperity as we are having today, and while I do not want to be classed among the pessimists yet it seems to me that a warning note of impending danger should be sounded lest in our desire for quick returns we forget the future. I am speaking exclusively of the mail order plant trade. The matter looks to me like this. Through the expenditure of vast sums of money the mail order man has gradually won the confidence of a skeptical public. Years of strenuous effort, and not unfrequently actual privation has been the cost of making the mail order trade what it is today. Great establishments have come into being and fortunes have been amassed. Millions of American homes have become fairer because of the mail order man. Pluck and perseverance have been the passports to better days. He is a benefactor of mankind—in short he is the advance agent of Nature in her happiest mood. He has, as a rule, kept faith with the public, and as a result he represents today the highest type of the mail order business man, and, let me add, his prosperity has not been won without the hardest kind of a fight.

Lured on with the mistaken idea of quick riches there have sprung into existence hundreds of beginners in our business, whose chief asset is hopefulness. In some cases by dint of perseverance they have made rapid strides and deservingly so. But the class I wish to call especial attention to irrespective of the extent or age of their business is the one who offers the public certain specific varieties, through their advertising and literature, secures payment in advance for the same and then sends any old thing as a substitute, not having the varieties advertised and not intending to have them. What is the result from the buyer's standpoint? The plants are set out and hope runs high. Tenderly watched and cared for until the first buds appear, and then intense expectancy. The descriptions are read and re-read with visions of large, double flowers, long stems, and the joy of living is materially increased. The first flower appears—or should appear in all its radiance. But, alas! with it comes the blasting of fond hopes. The dazzling beauty let us say of Killarney is found reflected in Pink Daily! Sorrow and anger struggle for supremacy—anger wins and the mail order man, honest or dishonest, is forever banished from the good graces of that buyer. Thus the money expended to secure that customer (and it rarely costs less than seventy-five cents to secure a new customer) is thrown to the winds and

he becomes a living menace to our business forevermore. I do not think I am exaggerating the consequences of substitution in drawing these conclusions. But what of the seller?

Having secured the order—and more important, the money—he feels that two-thirds of the transaction is finished. The plants are shipped, and as far as he is concerned the incident is closed. But it isn't. He not only loses that customer, and indirectly many more, he not only does the legitimate mail order trade an irreparable injury but he takes money under false pretenses and is amenable to the United States postal laws. These are not imaginary details. I have taken considerable pains to look into the abuse and feel somewhat competent to speak on the matter.

THE REMEDY

I have always felt the necessity of the National Society giving more attention to the mail order trade as one of the most important auxiliary branches within its scope of usefulness. With the grower for the local market we have much in common, for if we succeed in interesting the masses we must of necessity prove helpful to the grower of cut flowers and miscellaneous plants which the amateur grower without glass is unable to produce and must perforce patronize the professional grower. This demand is more imminent once the interest in our products is aroused, to which end the mail order man is at all times bending his energies. Why not then solicit the aid of the S. A. F. in keeping this branch of the industry up to the highest standard of excellency. Let there be appointed at each annual meeting an impartial committee to investigate, by securing samples, the numerous plant offers made through the press and catalogues, the authenticity and reliability of the claims made, particularly as to whether or not the plants sent out are true to the labels they have and such other data that will tend to promote the best interests of the plant trade, and such information be presented at the annual meetings of the Society either publicly or to the executive committee. In this no honest man need fear the result. The means will be at hand to eradicate deception and such abuses which keep our business from that development we naturally expect and ought to have from the money and efforts continually expended. Possibly it may be said the end does not justify the means and the method is too radical. But, as I said before, an honest man need have no fear of investigation, and unless I am very much mistaken unity of action in this matter will bring the mail order trade up to a higher standard of money making possibilities and increase the efficiency and power for good of the S. A. F.

Roses Under Glass

III.

POTTING

A few days before the cuttings are ready to pot, a sufficient number of two-inch pots (this size being the recognized standard for rooted cuttings) should be collected and given a thorough cleaning, particular care being taken to remove all of the old soil from the inside of the pots. These, or as many as can be accommodated, should then be placed in a position convenient to the potting bench.

The bench intended to accommodate the young stock should also be cleaned and prepared. Considerable importance is attached to the selection of this bench. Many growers, in their desire to economize are apt to utilize the bench which has yielded the smallest and poorest crops during the season, forgetful of the fact that the conditions resulting in the failure of the old plants to produce good flowers will in all probability have a bad effect on the young stock. Stagnant air, and poor light, etc., effect conditions under which no rose will thrive and it is absurd to suppose that where old established plants have failed to do well, the young stock will prosper.

The future success or failure of roses depends to a great extent upon the care bestowed on them in the propagating bench and the period extending over the time they occupy the first pots. Therefore, we should by all means place them on a bench where they will receive abundant sunshine and air. In cleaning out the bench it is not necessary to remove all the old soil. On the contrary, leave in about two inches as this retains considerable moisture and prevents the pots from drying out as quickly as they would were the bench empty. Furthermore, the soil thus left brings the top of the pots on a level with the top of the bench, facilitating syringing and permitting the air to circulate freely among the foliage, thus reducing the danger of contracting mildew, black spot, and other diseases to which roses are subject. With the addition of a layer of sifted ashes about one inch in depth, placed there with a view to keeping the soil in the pots free from worms, the bench will be ready for the young stock.

The soil left over from last season's planting will, if it has been properly handled and cared for, be of the right texture for potting. The decomposing matter contained therein will have imparted to the soil a sufficient amount of nutriment and any additional fertilizer is unnecessary. Before it is placed on the potting bench, the soil should be sifted through a three-quarter-inch screen.

When lifting the cuttings it is advisable to take up only a few at a time. The roots are far from being elastic and if an attempt is made to spade up the entire row at once many of the roots will be left in the sand and the cuttings thus robbed will be slow to start in the pots.

When potted the roots of the cutting should occupy a position as near as possible about one-third of the distance between the surface and the bottom of the soil

leaving two-thirds of the soil underneath for the roots to work in. Too much importance cannot be attached to pressing the soil down firm. Not to the extent that it will bake when watered, but sufficient that when turned out, the soil leaves the pot in the form of a compact ball. Also, it is necessary to leave a space at least a quarter of an inch in depth between the surface of the soil and the top of the pot to hold water.

As soon as a box is filled with plants they should be carried into the house, set on the bench, and watered immediately. It is never safe to fill box after box and leave them standing about the shed exposed to draughts. The young, tender plants are very sensitive to sudden fluctuations of temperature, and soon show the effects of such mistreatment.

The first watering should be thorough in the full sense of the word. This is not meant to convey the impression that the soil must be reduced to the consistency of mud, but it is essential that all the soil be uniformly moist.

For the first four or five days until root action is fairly established, the plants will require to be shaded from the intense heat of the sun. But the same rule observed in the propagating bench is applicable to the plants in pots and the shade must be removed immediately on the sun ceasing to shine on the bench.

J. E. Simpson

Some British Favorites

A proof of the continued popularity of the "Queen of Flowers" in England is afforded by the prosperity of the National Rose Society, which was founded in 1876 by the late Rev. H. Honywood D'Ombraim. The society has a large and increasing membership, whilst its summer and autumn shows are among the most popular events of the horticultural year. The society has rendered useful service in publishing an annual, full of acceptable and up-to-date information on rose matters.

Mr. Edward Mardley, the secretary of the society, has taken great pains in preparing a list showing the number of times which the different varieties have been shown during the period 1899 to 1906. The list is a valuable index of the leading roses which find favor with the chief exhibitors. The first dozen in order are: Bessie Brown, Mildred Grant, Frau Karl Druschki, Mrs. John Laing, Ulrich Brunner, Caroline Testout, Dean Hole, Kaiserin Augusta Victoria, Mrs. W. J. Grant, A. K. Williams, Mrs. R. G. Sharman Crawford and La France. The list includes seven comparatively new Hybrid Teas and five of the older Hybrid Perpetuals. Dean Hole, the subject of the supplement issued with this number of HORTICULTURE, has come to the front very rapidly, for it was only introduced in 1904. It is a worthy specimen to commemorate the name of one who labored so zealously in the interests of his favorite flower. Dean Hole was one of the successes of the Temple show in 1904 when Messrs. A. Dickson and Sons obtained an award. In the same year they secured a gold medal from the National Rose Society for the best H. T. seedling in the show. It has proved itself

a splendid addition to the rose garden, being very vigorous in growth. The large-sized blooms of good substance are of a silvery carmine tint, with shades of salmon. Bessie Brown is also one of Messrs. Dickson's gold medal roses, the large creamy white blooms usually being well to the fore at the leading shows. They also introduced Mildred Grant, of a silvery white tint, which is recognized as a good "laster."

Frau Karl Druschki, in spite of its difficult name, has secured a firm footing as one of the best whites in commerce, and its attractive form is always included in the most successful exhibits at the shows. It is vigorous in growth and free in blossom; the flowers are boldly produced and finely formed, with wax-like petals. Its popularity is likely to further extend.

Mrs. John Laing has charmed the public for the last 20 years, and is still useful as an exhibition rose. The well shaped and globular blooms are of a very attractive rosy pink tint. Ulrich Brunner is also included in the older section. This rose with its cherry red tinted petals has been found very reliable. It is also useful for autumn culture.

Caroline Testout and Kaiserin Augusta Victoria have long passed from the novelty stage. Mrs. W. J. Grant needs but little comment for it is known and grown in America as Belle Siebrecht. A. K. Williams is another old friend, of a carmine red tint. Mrs. R. G. Sharman Crawford is a very acceptable rose pink and La France has been winning favors since 1867. The progress of the H. T.'s in the last few years has been remarkable. Raisers have paid special attention to increasing this class so that at the present time there is a wide selection from which a choice can be made. The H. T.'s may rightly claim to have the good qualities of both parents without the bad ones. There is no doubt that the hybridists have still some new developments upon which to work and these in time will further enrich the present long list of treasures in this section. What is now needed is a careful weeding out, for some of the lists are becoming over-crowded, whilst the multiplicity of varieties only confuse the buyers.

NEW INTRODUCTIONS OF 1907.

The great success of the shows last year was Walsh's new Rambler, Hiawatha. This received an award of merit from the Royal Horticultural Society in addition to other honors at leading exhibitions. The Queen of Spain, raised by Messrs. S. Bide and Sons, was also one of the most popular introductions. This is a seedling from Antoine Rivoire and a hybrid perpetual, and it has the advantage of a vigorous constitution and good lasting powers. It is of a pale flesh tint, being darker in the center, and is likely to be in favor for exhibition work. The Royal Horticultural Society has given it an award of merit. Alex. Dickson and Sons are sending out nine new roses. These include Harry Kirk, a hybrid tea which ranks amongst the firm's best productions. The color is deep golden yellow, passing to canary at edges of petals, which are very large and smooth. The fragrant flowers are of good size and form. Elizabeth Barnes, from the same firm, is of a unique tint, being satiny salmon rose, the centre being fawn, suffused with yellow, the outside of the petals is deep rosy red splashed with yellow. The blooms have a delightful fragrance.

Horticulture in the Public Schools

Editor HORTICULTURE:

Of all that transpired at our convention in Dayton last summer, the address by Mr. Hallock on teaching horticulture in the public schools, was to me the most important and far-reaching. And in your recent issue of HORTICULTURE that splendid article by Mr. Henry Saxton Adams has awakened me. As Mr. Saxton Adams says, it is not enough to have a piece of land, but the youngsters require a leader. Mr. Hallock says "need of standardizing."

On careful perusal of all documents and reports that we could obtain, we find no two schools or organizations conducting their garden-work on the same lines, but each pursuing their work according to their own ideas and as seems best to them. Great good has undoubtedly come from these disunited efforts, but greater good will undoubtedly come from concerted action, emanating from some central authority, thoroughly standardizing their work. Then why not the S. A. F. that central authority? Let it get into the most fertile field and demonstrate the work thoroughly; employ some one with a thorough practical knowledge of gardening, secure the land, buy the necessary tools, seeds, bulbs, and plants, and teach the children and their teachers how to do this work right; take photographs during the season showing the different stages of the work, and in winter when no outdoor work is to be performed, visit every school possible and show them just what had been done, and tell them how and, if necessary, give out literature telling the children all about it.

The press of the country are anxious for such good material, and once in the press then in the homes—"and what then"? What under the canopy of heaven can you do that will produce such a lasting and refining influence on humanity as teaching the children and their teachers gardening?

Flowers—the toughest kid on the streets loves a flower. Teach him how to cultivate them and his toughness will disappear. On the training of the kid depends the good citizen, and the good citizen is the bulwark of the nation. I am of the opinion that if this great work was thoroughly and practically demonstrated, that the States would awaken to do their duty in this direction, if not the nation itself. But as Mr. Adams says, to get a director who knows how to garden and to handle children "is of vital importance." I think it is the vital point, the very foundation.

I fear few of us stop to fully realize the great good this work will bring to humanity—to say nothing about the monetary consideration to our profession. Of course, this means money to get a start, but with so many large and prosperous firms throughout this great country, and the grand results bound to come to us all, surely enough can be raised to start this great work right.

I will be one to give fifty dollars a year for five years, if necessary, to start this work right, and am convinced that by that time the States, and maybe the National Government, and our many wealthy citizens will awaken to the good results and give it substantial support.

The States and the Nation itself certainly owe something to the children. Very truly yours,

W. H. Adsett.

To the
Queen of
Flowers

Once more it is our prized privilege to dedicate an issue of HORTICULTURE to the Queen of Flowers. The literature and poetry of the Rose probably equals in volume the literature and poetry of all other flowers combined. From time immemorial, poets and lovers have found in the Rose a source of never-failing inspiration and sentiment. Other flowers there are that are dearly beloved and that have, by their beauty or association, incited men to noble aspirations, to patriotism and deeds of valor, but the rose has been, is, and undoubtedly always will be the most devotedly cherished, the most widely beloved of all the floral kingdom.

All
aboard for
Washington

The meeting of the American Rose Society at Washington next week should attract a large and distinguished gathering of professional horticulturists from all sections of the country. The exhibition promises to be a remarkable manifestation of the present attainments in American rose development, both in the florists' cut flower specialties and the larger domain of garden material. The awakening of our commercial establishments in the matter of rose hybridization in the past few years is already beginning to show results and this opportunity to examine a number of new home products for the first time should not be neglected. As to the social side of the event, it is pretty well known everywhere what a visit to Washington means. In no city in the land does the horticultural visitor find more cordial welcome or more open-hearted hospitality.

Sometime,
but not yet

It is unfortunate and not at all to the credit of the so-called "upper society" people of this country that they have not yet reached the stage in civilization where they can forget, for a time at least, the lines of class distinctions, throw down the barriers, and find in such a body as a society devoted to the interests of the Rose a common ground where gardener and employer, artisan and banker, all, without regard to station in social or business life, can meet and work together, actuated by a single purpose, each happy in the privilege to render good service in a good cause. The American Rose Society spent its first few years in a futile effort to "make oil and water mix" and it was only when the organization had reached the verge of dissolution that the professional element took hold and by vigorous work on the same lines as followed by other societies saved the American Rose Society and started it upon what now promises to be a successful career since which time the amateur element has continued to sift out and, we are very sorry to see, has now dwindled to a "mere handful." Sometime but not yet, the time may come when the sanguine hopes of well-meaning enthusiasts may be realized and rose lovers, amateur and professional, may be found shoulder to shoulder in the ranks, as rose lovers. "Tis a consummation devoutly to be wished," surely, but, in the meantime, let the American Rose Society keep busy on its present practical lines.

Colored Plate with this Issue

THE ROSE

"Not one of Flora's brilliant race,
A form more perfect can display;
Art could not frame more simple grace,
Nor nature take a line away."

* * *

"Ye breathe the fragrance of the longed-
for Spring,
Oh roses, Oh roses!
When nestling bluebirds on the peach
boughs swing,
And the first bud uncloses."

—Frances Bartlett.

* * *

A butterfly the wild rose wooed,
And love's sweet story told;
He drank the perfume of her lips,
And kissed her heart of gold.
The crimson blushes dyed her face,
She loved the butterfly,
But ah! he stole her kisses—
Then he passed the rosebud by;
He stole her kisses—then, alas!
He bade the rose—goodbye!
—Agnes Lockhart Hughes in Boston Trans-
script.

* * *

"The rose in the garden unfolded her bud,
And she laughed in the pride of her youth-
ful blood,
As she thought of the gardener standing
by—
He is old—so old! And he soon must die.

The full rose waxed in the warm June air,
And she spread and spread till her heart
lay bare;
And she laughed once more as she heard
his tread—
He is older now! He will soon be dead!

But the breeze of the morning blew, and
found
That the leaves of the blown rose strewed
the ground;
And he came at noon, the gardener old,
And he raked them gently under the mould.

And I wove the thing to a random rhyme,
For the rose is Beauty, the gardener,
Time."

—Austin Dobson.

* * *

(A favorite poem of Mr. Gladstone.)
It was peeping through the brambles,
That little wild white rose,
Where the hawthorn hedge was planted
My garden to enclose.
All beyond was fern or heather
On the breezy open moor;
All within was sun and shelter,
And the wealth of beauty's store.
But I did not heed the fragrance
Of flowers or of tree,
For my eyes were on that rosebud,
And it grew too high for me.

In vain I strove to reach it.
Through the tangled mass of green—
It only smiled and nodded
Behind its thorny screen.
Yet through that summer morning
I lingered near the spot;
Oh! why do things look sweeter
If we possess them not?
My garden buds were blooming,
But all that I could see
Was that little mocking wild rose
Hanging just too high for me.

So in life's wilder garden,
There are buds of promise, too,
Beyond our reach to gather,
But not beyond our view;
And like the little charmer
That tempted me astray,
They steal out half the brightness
Of many a summer day.
Oh! hearts that fail for longing
For some forbidden tree,
Look up and learn a lesson
From that wild rose and me.

'Tis wiser far to number
The blossoms at my feet,
Than ever to be sighing
For just one bud more sweet.
My sunbeams and my shadows
Fall from a pierced hand;
I can better trust His wisdom
Since His heart I understand.
And may be in the morning
When His blessed face I see,
He will tell me why my white rose
Grew just too high for me.

"Dear flower of heaven and love! thou
glorious thing
That lookest out the garden nooks among;
Rose, that art ever fair and ever young;
Was it some angel on invisible wing
Hover'd around thy fragrant sleep, to fling
His glowing mantle of warm sunset hues
O'er thy unfolding petals, wet with dew,
Such as the flower-fays to Titania bring?
O flower of thousand memories and
dreams,
That take the heart with faintness, while
we gaze
On the rich depths of thy inwoven maze;
From the green banks of Eden's blessed
streams
I dream'd thee brought, of brighter days
to tell
Long pass'd, but promised yet with us
to dwell."

* * *

God save you! Splendor of the Spring,
Blazing
The jewels strung upon your spray
Unveiling your vermilion
To the sun
In its virginal array.

You see your face's cinnabar
From afar
Multiplied amid the wheat:
Amid the wheat whose vivid green
Shines more sheen
Against your fellows set in it.

Then here, where by your sweets suspire,
Filled with fire,
Despite the triple sisters' sad,
I do design to make my song
Match the long
Sweep of the wings that Horace had.

Let others sing the Pink's soft hues
If they choose
Or of the Lily's silvery flower,
Or of the golden Fleur-de-lis,
She that is
Emblem of our Prince's power.

But I, while voice is mine to sing,
Still will fling
All my praise before the Rose,
The more since she too bears the name
Given by Fame
To Her who all my worship owes.
(Written in 1550. Translation by Wynd-
ham.)

PAYING A ROSE FOR RENT.

In Manheim, Pennsylvania, stands the Zion Lutheran Church, which was gathered together by Baron William Stiegel, who was the first glass and iron manufacturer of note in this country. He came to America in 1750, with a fortune which would be equal today to a million dollars, and founded and built and named Manheim. He was a man of deep spiritual and religious belief, and of profound sentiment, and when in 1771 he gave the land to the church, this clause was in the indenture:

"Yielding and paying therefor unto the said Henry William Stiegel, his heirs or assigns, at the said town of Manheim, in the Month of June Yearly, forever hereafter, the rent of ONE RED ROSE, if the same shall be lawfully demanded."

Nothing more touching can be imagined than the fulfilment each year of this beautiful and symbolic ceremony of payment. The little town is rich in roses, and these are gathered freely for the church service, when "One Red Rose" is still paid to the heirs of the sainted old baron, who died in 1778, broken in health and fortunes, even having languished in jail some time for debt. A new church was erected on the site of the old one in 1892, and in a beautiful memorial window the decoration of the red rose commemorates the sentiment of its benefactor.

The Rose Tavern, in the neighboring

town of Bethlehem, stands on land granted for the site of a tavern by William Penn, for the yearly rental of "One Red Rose."

In England the payment of a rose as rent was often known. The Bishop of Ely leased Ely house in 1576 to Sir Christopher Hatton, Queen Elizabeth's handsome Lord Chancellor, for a red rose to be paid on midsummer day, ten loads of hay and ten pounds per annum, and he and his Episcopal successors reserved the right of walking in the gardens and gathering twenty bushels of roses yearly. In France there was a feudal right to demand a payment of roses for the making of rose water.

From "Old-Time Gardens," by Alice Morse Earle. Published by the Macmillan Company.

"TIGHTENING OF THE TIES."

Editor HORTICULTURE:

"Tightening of the Ties" in your issue of February 23 is well put. I thank you very much for the prominence you gave the subject in HORTICULTURE. Gardeners' and Florists' clubs are organized for a definite purpose, and in our exchange of ideas along business lines we begin to realize that we are receiving a practical education; our minds are being broadened, and we become conscious of the fact that our calling is not composed of several petty groups, the one divided against the other. The end of such division is failure.

May the spirit of brotherhood be a mighty force for the betterment of our life's work. Let it be the momentum that shall enable us to see "eye to eye," and we shall go hand in hand with one grand purpose in life, and so may be of some help to our fellow-man, and our calling—the greatest ever given to man—will become one and inseparable.

THOS. H. WESTWOOD,
Pres. G. & F. Club of Boston.

"THOU CAN'ST NOT SAY I DID IT."

"The reference in this column a few weeks ago to a reported organization of Greek flower buyers has called forth a meaningless sermon from a Boston editor."

Florists' Exchange.

Our irritable but always esteemed contemporary is once more "off the track." Its simple faith in "reference in this column" as an exclusive source of information for the rest of the world is just admirable but its anxiety to prove innocence when no charge had been made against it has a suspicious look.

"When you see a tom cat with his whiskers full of feathers, do not say 'Canary'—he'll take offense."

Frau Karl Druschki, alias Schnee-konigin, alias Snow Queen; Kaiserin Augusta Victoria, alias White American Beauty! Wanted, a fearless nomenclature committee.

A bill is now before the Wisconsin state legislature, providing for the creation of a state park of the lands surrounding Devil's Lake. The property is located about midway between Milwaukee and Madison, and has excellent scenic and geological attractions. The bill has a more than even chance of being enacted into law.

WHOLESOME CHESTNUTS.

Seedlings of all kinds as fast as they show fitness should be pricked off into flats, and others more advanced and already pricked off and crowding should be either transplanted into other flats or potted. Pots are preferable for many kinds of bedding plants as well as for nearly everything intended ultimately for pot culture for decorative purposes. Lobelias, salvias, begonias and several other things are better in pots when offered for sale; as for coleus and heliotrope they should of course be potted right out of the sand. Lobelia at first may be pricked off into flats in small clumps, and when these grow to decent size they can be potted and grown on until they flower.

Lettuce for early planting should now be sown. Celery for early planting should now be so far advanced as to make pricking off necessary. Keep celery growing ahead without a check. If you have never tried the experiment of sowing a little onion seed in the greenhouse you should lose no time in doing so; when they are well up over the soil in the flat, prick off into other flats and leave them there until time to plant them out, or later pot them into small pots after they get a fair size in the flats; that is the way to raise exhibition onions. Don't leave cabbage or cauliflower too long in the seed boxes; if you do they will have a hard time recovering after being shifted.

It is now time to think about dahlias. If you intend buying any of the good varieties recently introduced, do not put it off too long if only the good standard sorts are wanted. By getting strong bulbs now you may be able to increase the stock by propagation before planting time comes. If you own stock from which you intend to propagate, take in for that purpose only such bulbs as you are sure are correctly named. Place them on a bench, throw some leaf mould over them, and wait until the cuttings appear, but don't wait until they are long, spindly and soft; take them off when they are short and stocky, with a bit of a heel if possible; put them in the sand to root; shade them for a few days absolutely, and after that only when the sunlight directly strikes them; give the cuttings sufficient water to keep them from wilting; pot them up whenever they have emitted short roots; shade them then for a day or two; after that give them all the light possible and grow them cool. Be careful at all times in labeling, because if you intend selling the plants a neglect in that particular will come back on you after the plants bloom. Don't forget that single dahlias are almost unsurpassed for cutting from all through the late summer, and are always gorgeous to look at whether growing or cut.

Cyclamen seedlings are now, or should be well advanced in the flats into which they were pricked from the seed pan. On no account leave them to get crowded in those flats; rather transplant them carefully into others, and then as soon as they have made sufficient progress in growth shift them into pots of a suitable size.

Pansies in flats in the greenhouse should not be allowed to remain there much longer. Remove them to cold

frames, flats and all, or in a very little while plant them in good soil in the frames. Give the frames where pansies were planted in the fall all the air and light possible from now on; give attention to watering; remove dead flowers and leaves, taking care at all times, however, that sufficient covering is provided at nightfall to meet all emergencies.

Take off violet cuttings and root them without delay. Look over canna roots and put up all required of the French type, examining carefully every root before potting to avoid potting dead roots. Don't be too severe in dividing choice cannas; rather err on the safe side and it will be found more satisfactory in the end.

Water azaleas liberally now, but do not syringe. It is much better to have a liberal proportion of the blooms on azaleas only half open when selling time comes. They may not look so gorgeous in that stage, but the majority of buyers now know what a plant in that condition means for service.

Hydrangeas sold well last Easter. It is of course now too late to suggest them if they are not already under way, but if they are look well after them and get the bloom in as good condition as possible. There are many devices within the range of possibility to tempt buyers of miscellaneous bulbous flowers. I remember that last year a great many pansy plants were sold in small fancy baskets and dishes; there will likely be more sold this year. Small hampers and baskets filled artistically have an irresistible charm. Pans of tulips are never long standing unsold. It will be of interest to know that Messrs. R. & J. Farquhar & Co. have something new in *Primula obconica* that is not only a novelty but a sensational one. That firm has given us many good things, such as the Farquhar rose, *Lilium philippense*, red *Begonia Erfordii*, and ever so many other things, and to my knowledge they never gave the stamp of their approval to anything that turned out a failure. "Facts are chieftains that winna ding."

AT THE WIDENER CONSERVATORIES.

One of the most palatial country seats in the vicinity of Philadelphia is that of P. A. B. Widener at Ogontz. The gardens and conservatories have been under the care of William Kleinheinz for many years and have become famous under his superintendence, not only in this vicinity but outside also by reason of success of their products on the exhibition tables in distant cities.

At the present writing (mid-February) there are many interesting items in the conservatories which will well repay a visit by the horticultural student. The several houses of carnations are in prize-winning shape. Lady Bountiful we have never seen finer; Haines is also in magnificent shape; Patten is fine but rather late being reluctant and unsatisfactory until January; Robert Craig, Harlowarden and several other varieties are noticeably good. John Kuhn's new pink seedling is being tested here and looks promising. The flower is a soft rose, a pure self when first open but paler on the outer half of the petals when the flower is older. Mr. Kleinheinz considers this the best keeper of any variety he knows.

A house of *antirrhinums* is in splendid shape at present with flower spikes a foot and over in length and of refined colors—mostly selfs, although there are two very choice variegated sorts.

One would say that there could not be much to admire in a bench of such a common thing as double *Von Sion* daffodils; but our attention was arrested by one which was the largest and most perfectly formed we have ever seen—an ideal flower. The cyclamens are a good strain and well grown. There is a white variety especially which for size and purity is simply magnificent. If this is carefully watched we have in it the forerunner of a race of giant flowers that will make our present gigantesms and grandiflorums look like pigmies. This is no exaggeration. The writer may claim with all due modesty to have seen as many fine cyclamens during the past twenty-five years as any and more than most.

Sweet peas are grown here quite extensively, the varieties being mostly Florence Denzer for white and Christmas for pink. A number of new Zvolanek seedlings are on trial, one of the best being Mrs. E. Wild, a ruby. There is also good pale blue—unnamed.

The rose houses are in fine condition, but there are no novelties calling for special mention. The palm houses and fern houses are extensive and the stock unusually fine. The fruit houses will be a blaze of bloom very soon. I asked Mr. Kleinheinz if Mr. Widener took a keen interest in all this glory and he answered that he did. That Mr. Widener came as often as he could to walk around—and then added with that charming naivette for which he is famous—"but you see Mr. Widener must go to town pretty often too, so he can make some money to pay for all this with."

GEORGE C. WATSON.

You'll find something worth reading on every page of this paper.

Rose Little Dot

By courtesy of F. W. Keasey

This pretty little hardy rose is one of Jackson Dawson's hybrids, *Rosa multiflora* x *Clotilde Soupert*. The flowers are flesh color and very pro-

fuse, in fact too much so, for Mr. Dawson tells us that it blooms so incessantly that he could never find wood enough from which to propagate it in

sufficient quantities to give it any wide distribution. It received honorable mention from the Massachusetts Horticultural Society when exhibited

A NEW INSTRUCTOR AT AMHERST.

C. A. Bishop of Waltham, Mass., has been appointed instructor pro tem. in floriculture at Massachusetts Agricultural College to fill out the current semester in place of Francis Canning, who leaves this week to take charge of an estate in Altoona, Pennsylvania. Mr. Bishop has had a thorough training in various lines of agriculture, horticulture and gardening in the English way and has had several years experience in teaching. He has filled many responsible positions. His garden education began in 1873 when he went to Bylaugh Park, Norfolk, as German gardener. He remained at this place for seven years and at the time of leaving was foreman of all the glass houses there. For some time he was connected with the famous Veitch Nurseries of England. For two years he was foreman in the fruit house and gardens at Hatton House, Tring. He was then three years foreman at Basing Park, Hampshire; then two years foreman at Hopwood Hall, Lancashire; then three years head gardener and resident manager at The Grove, Teddington; then for eight years head gardener and steward at Wightwick Manor. In 1898 he was appointed head of the Department of Experimental Agriculture in the Bermudas which

position he held until the spring of 1905. During 1905 and 1906 he was engaged in commercial horticultural enterprises on his own account in the Bermudas, coming to Massachusetts to make his home in the fall of 1906.

HORTICULTURE'S REPRESENTATIVES.

ROSES AT WOODS HOLE.

Among the newer productions in M. H. Walsh's collection of rambler roses at Woods Hole *Evangeline* stands out as the queen of the singles. The flowers are pink flushed and veined, very large, fading to almost white as they mature. The blooms are borne in very large trusses and the foliage is enormous and shining. Mr. Walsh predicts a great future for *Evangeline* in park work.

Paradise is another fine one not yet ready for distribution. The petals are pink toned down to white in the centre of the flower, shell shaped and wavy. The stamens are numerous and bright yellow, giving a lively effect especially in the newly-opened flowers.

Among the unnamed seedlings are two doubles, rosy pink in color. One has wavy crumpled petals, very fine foliage and graceful, delicate habit. The other, a cross between *Wichuriana* and *Baltimore Belle*, bears very long trusses of flowers, deeper than *Debutante*, the color paler on the older blooms.

The New Cyclopaedia of American Horticulture. L. H. Bailey. Six large quarto volumes; 146 full-page plates; 25,000 plant names; \$25.00 in payments of \$1.00 down and eight monthly payments of \$3.00 each, or cash payment of \$23.75. Order from Horticulture.

NEWS OF THE CLUBS AND SOCIETIES

NEWPORT HORTICULTURAL SOCIETY.

Last Tuesday evening a business meeting of the Newport Horticultural Society was held in the ante room of the Society's hall. The business was dispatched in short order, the meeting lasting not more than twenty minutes, when an adjournment was voted. It was after this that the most important meeting perhaps in the Society's history took place, when members with their families to the number of between one hundred and fifty to two hundred, assembled in the main hall for the enjoyment of an entertainment, provided for them by the entertainment committee, of which John T. Allan was chairman. This entertainment consisted for the first part of vocal solos by Louis Walker, the famous blind tenor of Taunton, Thomas F. Connolly, Augustus H. Swan and John T. Allan, Jr., the boy soprano; the latter in his rendering of several selections made the hit of the evening. He has a voice of unusual sweetness enhanced by careful training with a presence and manner bright and captivating. Interspersed with the solos were readings by Miss Lilian E. Maher and Mr. Rankin, and violin selections by Master Richard Rossen and piano selections by Miss Finn.

At the conclusion of the first part of the musical program an excellent and elaborate collation was served by the committee assisted by Mr. Wiswell the landlord of the Perry House, the purveyor. After the collation had been leisurely disposed of the musical program was resumed and uninterruptedly continued until a late hour. Bruce Butters acted the host with rare tact and acceptance. There is not the least possible doubt that apart from the enjoyment pure and simple, meetings of this kind are beneficial to societies in other ways, and certainly the many words of approbation of this one indicates much good for the future of the Society. D. McINTOSH.

AMERICAN ASSOCIATION OF PARK SUPERINTENDENTS.

The mid-year meeting of the executive committee of this association was held on Saturday, March 2, at the New Manchester House, Manchester, N. H. There were present: President Byron Worthen, of Manchester; Secretary Mulford, Harrisburg, Pa.; ex-Secretary Duncan, Boston; Chas. Keith, Bridgeport, Conn.; J. F. Cowell, Buffalo, N. Y.; ex-President J. A. Pettigrew and Wm. J. Stewart, Boston. The program for the annual convention to be held at Toronto next August and other matters appertaining to the general welfare of the association were discussed. A resolution on the death of James Braik of Buffalo, N. Y., a member of the association, was unanimously adopted. Messrs. J. F. Cowell, J. A. Pettigrew and Theodore Wirth were appointed a committee to consider the question of closer affiliation with other horticultural organizations.

In the evening the visitors were entertained at a banquet in the New Manchester House, at which were present ex-Mayor Knowlton and Messrs. Ramsay and McElroy of the Board of Public Works.

COLUMBUS FLORISTS' CLUB.

The last meeting of the club for February was held on the twenty-sixth, with President Stephens in the chair. It was a large and enthusiastic gathering, all the other officers and many members being on hand. There was a very attractive display of plants and flowers; the committee on awards, consisting of Messrs. Metzmaier, Roth, Brust, Reichart, and Saxton, gave R. A. Currier 20 points for a very finely-flowered specimen of Simon Mardner azalea; and I. D. Subert 25 points for a superb vase of Princess of Wales violets. The question of ways and means for a successful chrysanthemum show this autumn were discussed, and the solid manner in which our members back this project can only lead to an unqualified success. The committee in charge of this matter consists of Messrs. M. B. Faxon chairman, Albert Knopf, Guy H. Woodrow, Sherman F. Stephens and James McKellar. The plan of distributing penny packets of vegetable and flower seeds to the public school children, as in previous years, was arranged for, M. B. Faxon being chosen to direct the work. Lack of space prevents me from describing in full the good work that is being done here in the matter of school and home gardens—the greatest improvement is already noticeable in the cleaning-up of back yards, and other unsightly places; to say nothing of the beautiful front yards and window boxes that are the direct results of our club's hard work. After a very long and profitable meeting, the club adjourned to Tuesday evening, March 12.

NEW JERSEY FLORICULTURAL SOCIETY.

The monthly meeting and floral display of this society was held on March 1, at which time were started the competitive exhibits for 1907. Lager & Hurrell staged a tasteful group of *Lælia Cattleya Arnoldiana*, *Denbrobium nobile album* and *Cattleya Schroderæ*; Julius Roehrs Co., a collection of their Easter blooming orchids, *Cattleya Schroderæ* white and colored, *Oncidium splendens*; Orson A. Miller, *lycastes*, *Odontoglossum crispum*, *Oncidium fuscum*, and *Dendrobium virginalis*, for which they all were awarded first-class certificates. Carnations and roses were shown by D. Kindsgrab, Wm. Reid, Max Schneider, W. J. Bennett and others. F. R. Piereson Co. offered a prize of \$10.00 for the best 25 blooms of carnation Windsor at the fall show. A committee consisting of M. MacRorie, D. Kindsgrab and H. Halbig was appointed to frame a resolution on the death of O. D. Munn.

NASSAU COUNTY HORTICULTURAL SOCIETY.

At a recent meeting of the Nassau County Horticultural Society, Mr. Myers, manager to G. R. Sheldon, gave a few very instructive remarks on the growing of bush chrysanthemums for exhibition. The popular vice-president was listened to very attentively by all present. Mr. Myers as a grower has proved himself second to none in this section.

TARRYTOWN HORTICULTURAL SOCIETY.

The February meeting of this society was held in the regular meeting rooms, Feb. 26th, president Howard Nichols in the chair. A fine vase of the new scarlet carnation Beacon from Peter Fisher, Ellis, Mass., was on exhibition and was awarded a certificate of merit. Three well grown plants of *Primula stellata* were exhibited by Thos. Atkinson, gardener to Mrs. Henry Seigel, Mamaroneck, N. Y., who was awarded a cultural certificate for same. The monthly prize for the best twelve roses other than American Beauty was won by James Ballantyne with Bridesmaid.

It was decided to hold the June show, June 14th, and the dates were fixed for the fall show, for Nov. 6, 7 and 8th. A communication from David Fraser, Pittsburg, offering a prize of \$25.00 for the best twelve blooms of chrysanthemum Miss Clay Frick at the fall show was thankfully received, and was decided on to be offered as \$15.00 for first, and \$10.00 for second prize. A third prize of \$10.00 was then donated for the same exhibit by James Requa.

James I. Donlan read a paper on decorative work, and gave some good illustrations in the arrangement of cut flowers. Jos. Bradley contributed the cut flowers, amongst which were Roman hyacinths, *Primula obconica*, *mignonette*, cyclamens, carnations, and sweet peas. A very lively discussion followed. This was conceded to be the most animated meeting the society has had in many months and was thoroughly enjoyed by all. At the March meeting an essay will be read on out door roses.

D. McFARLANE, Cor. Sec.

NORTH SHORE HORTICULTURAL SOCIETY.

This society held its regular meeting in Manchester, Mass., on March 1; W. B. Jackson was elected president pro tem. The subject discussed was "Annals suitable for forcing." A. E. Parsons was awarded a certificate of merit for vase of annual lupins. Mr. Parsons recommended growing lupins for cut flowers. With a night temperature of 50 to 55 degrees, seed sown in benches the early part of September will produce flowers ready for cutting by Christmas, and with feeding and ordinary treatment several crops of cut blooms can be secured. J. W. Duncan, assistant superintendent of the Boston Parks, will speak at the next meeting. WM. TILL, Sec.

GRAND RAPIDS (MICH.) FLORISTS' CLUB.

The meeting on February 18, was well attended. S. S. Skidelsky was present and gave an interesting talk which was greatly enjoyed. Mr. Strong of the State Agricultural College spoke upon Sub-Irrigation. Discussions in regard to the growing of cucumbers, lettuce, etc., were participated in by the members. A committee was appointed to arrange for an exhibition on April 15.

AMERICAN ROSE SOCIETY.

The Spring Rose Show will open in Washington Light Infantry Hall, 15th & E streets, N. W., Washington, D. C., on next Wednesday, March 13th, to be open until Friday the 15th inclusive.

The Superintendent of exhibitions is Louis Freeman, 1307 F street, N. W., Washington, D. C. Various entries have already been made and M. H. Walsh of Woods Hole, Mass., advises that he will send on some fine samples of his climbing roses. The judges are Messrs. Robert Craig of Philadelphia, Wm. F. Kasting of Buffalo, and P. J. Hauswirth of Chicago. Papers will be prepared by Theo. Wirth, Supt. of Parks, Minneapolis, M. H. Walsh, and E. G. Hill of Richmond, Ind.

The headquarters of the Society will be at the Arlington Hotel. The Secretary will be in Washington on Tuesday, the 12th, to attend to matters pertaining to the Society and Show.

There is a particular prize offered by Moore, Hentz & Nash of \$15.00 and \$10.00 in cash to be given to the grower (that is a man who did the actual work of growing) for the two best exhibits of roses shown in the Exhibition. This is recognition of the actual workmanship, whether he be the exhibitor or an employee of the exhibitor. Corbey Bros. Bakery offer a cash prize of \$25.00 for the best mantel decoration. There are altogether 35 special premiums offered outside of the regular Society premiums. About three-quarters of the membership have already sent in their annual dues and several new men have forwarded their checks.

WASHINGTON ROSE CONVENTION NOTES.

Widespread interest is being manifested here as well as throughout the entire country in the convention which meets here next week. It is expected that nearly every state and territory in the Union will be represented as well as different portions of Canada. Washington is particularly interested in three classes open to amateur competitors; these classes comprise three prizes each; for best specimen of fern which has been grown in a dwelling for at least four months previous to exhibition, for which Jno. Clark offers prizes of \$5, \$3, and \$2; for best specimen of rubber plant grown in dwelling, for which Peter Bisset offers similar prizes, and Geo. Field offers three prizes for best specimen of geranium. The preparations for the exhibit which is to be of a national character, have been in progress for some time, and when the show opens it is promised that Washington will see one of the prettiest and most unusual exhibits ever offered.

JAS. L. CARBERY,

FLORISTS CLUB OF PHILADELPHIA.

Seven regular and one associate members were added to the roll of the club at its meeting on 5th inst. Mr. Pennock's record in the presidency is setting the pace and bids fair to break the record. Captain Lynch was the speaker of the evening his subject being the wonderful possibilities of sending roses by mail all over the country and the great good it does incidentally to the regular flower trade by educating the people. His remarks will appear in full in a future issue and will be found very interesting. F. H. Kramer of Washington exhibited three grand vases of Queen Beatrice rose which were declared by the committee the finest ever exhibited. One rose had been in a drug-gist's window in Washington for five days, showing the wonderful keeping qualities of this new variety. John Cook of Baltimore exhibited his new pink rose, a lovely Bridesmaid shade, of globular form and very fragrant. Edward Towill showed a vase of Joseph W. Hill a bronze pink shade apparently of merit. Robert Scott & Son sent two of the new Dickson varieties in the hardy Hybrid Tea class, one a Malmaison color the other orange yellow. They look to be very promising future winners. Samuel Batchelor exhibited some well grown standard Teas. Jno. E. Haines sent carnations and the Baur Floral Co. sent samples of their new calyx mender. Among out-of-town visitors who addressed the meeting were Messrs. Knickman of New York, Whitehill of Newburgh, Kramer of Washington, Haines of Bethlehem, and Swartz of Sharon Hill. The meeting was the largest and most enthusiastic of 1907. Convention matters occupied much time.

AMERICAN CARNATION SOCIETY.

Carnations registered by R. Witterstaetter, Cincinnati, Ohio. "The Cardinal". Color a deep rich scarlet, habit similar to Estelle but stronger. "The Aristocrat". Color a deep lively cerise, long stemmed flowers three to three and one-half inches in diameter. Habit, no surplus grass, a rapid grower, quite healthy and with long jointed stems. "Afterglow". Color a light rosy cerise, a three-inch flower, guard petals standing out straight with high built center. Habit, a strong vigorous grower, stems the length of Aristocrat but more rigid. Destined to be grown as largely as The Lawson in its time.

ALBERT M. HERR.

Lancaster, Pa.

LADIES, PLEASE TAKE NOTICE.

The following States have furnished members for the Ladies' Auxiliary to S. A. F., as follows: Missouri, Michigan, Pennsylvania, Illinois, Ohio, Massachusetts, Indiana, New York, Connecticut, Louisiana, Wisconsin and Washington. I would like to learn from the Ladies in District of Columbia, New Jersey, Colorado, Iowa, Kansas, Kentucky, Maryland, Nebraska, and other States not mentioned. Our first order for pins is growing small rapidly. Encouraging, "is it not?"

MRS. CHAS. H. MAYNARD,

Secretary,

219 Horton Ave., Detroit, Mich.

TOLEDO (O.) FLORISTS' CLUB.

Our meeting of February 28 was the greatest success the club has ever had. It was intended to be a special carnation meeting, but it is better designated as a carnation show. The consequence was, that the meeting proper did not amount to anything as far as club business was concerned, but it was over-running with good fellowship and sociability. J. L. Schiller had the management of the exhibits and his efforts in bringing together flowers from the home growers and the well-known houses in this line were very successful. All nearby florists were specially invited, and a goodly number came to look at the flowers and renew old friendship. We had several hundred visitors during the evening. The local press treated us very kindly in the reports.

A large table was reserved for the outside exhibitors and a handsome bunch of Aristocrat was in the center. John E. Haines exhibited John E. Haines, Imperial and Pink Imperial. The stem and size of flower on this collection surpassed anything seen here before. The F. R. Pierson Co. showed White Enchantress, Winsor and Miss Helen M. Gould. We liked the latter, but our people will not buy anything but pure colors. W. E. Hall's scarlet E. G. Gillett is well known here and is hard to beat. It was finer this year than ever, and when he makes up his mind to disseminate it, it will give no disappointment to buyers. R. Hartman of Napoleon showed excellent Lady Bountiful and Pink Lawson. Mrs. E. L. Hawkins had a sport of Enchantress and Lilium philippense.

Among local exhibitors President Bayer had 6 vases, of which specially worthy of mention were Mrs. T. W. Lawson, White Lawson, and some seedlings. Emil Kuhnke had extra good Rose Pink Enchantress, Mrs. M. A. Patten, Pink Patten, Marquise, Flamingo. In John Grattopp's collection Enchantress and Mrs. T. W. Lawson led. Mr. Haebich, florist at the State Hospital, exhibited his white seedling, which shows good substance, is medium large and of a pure glistening white. He has no name for it and refuses stubbornly all suggestions for a name in connection with the hospital. Kruger Bros. had a nice group of palms, lilac Marie Legraye, and lily of the valley; Richmond, Bride and Bridesmaid roses were especially good. A large table was filled with sturdy cyclamens with immense flowers grown mostly from a strain furnished by the Perennial Gardens Co., callas, Boston and Scottii ferns, shown by Emil Kuhnke. The Perennial Gardens Co., exhibited a well-grown specimen of Araucaria imbricata, and bulbs of lilium auratum, speciosum album and roseum.

The interest shown by the public is encouraging, and we hope to have a large show in the future. These little exhibitions of seasonable flowers tend to help our trade, and that is what we want.

AN INTERNATIONAL EXHIBITION.

On the first of May, 1907, a horticultural exhibition in connection with the International Exposition of Art will open at Mannheim on the Rhine, Germany. It is desired to make the exhibition representative of all countries, and Americans are invited to contri-

bute to the departments of plants and fruits. Especially notable will be the collections of orchids and cacti which will contain many novelties from South America and Mexico, growing as nearly as possible in their natural state. Original garden plots will be a prominent feature. Demonstrations will be given to show the improvements in packing fruits and flowers for ocean transportation, in preserving fruits both by cooling and heating processes, the various forms of jars, etc., for holding preserved fruit, etc.

Information regarding details of the exhibition can be obtained by addressing Ritter, Burgomaster, Chairman of the Exposition, Mannheim, Germany.

CARNATION NIGHT AT CORNELL UNIVERSITY.

The evening of February 25th was dedicated to carnations at the Lazy Club, which is the official organization of the Horticultural Department of Cornell University. At the solicitation of W. H. Griffiths, gardener of the department, a number of varieties of carnations were on exhibition. The merits of these were studied and compared by students and visitors. The extraordinary improvement which has taken place in the commercial qualities of this flower in recent years was noted and commented upon.

Collections of blooms were received from John E. Haines, Bethlehem, Pa., who forwarded an exceedingly instructive and interesting group, largely of his own origination. The F. R. Pierson Co., Tarrytown, N. Y., showed Winsor, Melody, Helen M. Gould, White Enchantress, Rose Pink Enchantress and Red Lawson. The interesting feature about this exhibit is that Gould, White Enchantress and Rose Pink Enchantress are all sports from the original Enchantress. The Pierson Company regard these as among the leading commercial varieties which they cultivate. Peter Fisher, Ellis, Mass., showed a fine vase of Beacon. The Cottage Gardens Co., Queens, L. I., contributed a collection of some fifteen seedlings, showing a great variety of color and form, and illustrating in a general way the possibilities of careful breeding when applied to the carnation. Many of the seedlings were of high merit. The Chicago Carnation Co., Joliet, Ill., provided a striking vase of that handsome carnation, Aristocrat. This variety illustrated in splendid fashion the best points of a good commercial flower. For itself it attracted much attention from visitors. The United States Cut Flower Co. showed a general collection.

It is needless to say that the exhibit provided both instruction and inspiration to the large group of students who had the privilege of examining and studying it.

THE HUNTINGTON HORTICULTURAL AND AGRICULTURAL SOCIETY (N. Y.).

The third annual exhibition of this society took place on the evening of February 26 in Huntington, N. Y. In the various carnation classes, Cottage Gardens Co. was first with Mrs. Ward (dark pink), Alma Ward (white), Beacon (scarlet), Creole Beauty (crimson); J. D. Cockcroft, second, with

Pink Patten, Georgia, Victory and Harvard, and first with Mrs. Patten and Seedling No. 50; H. T. & A. H. Funnell took second with Enchantress, also a first on N. elegantissima. A. Alius had a first prize on cyclamens and captured several other prizes, as did also R. Cartwright. Special award was given to F. R. Pierson Co. for carnation Winsor, and to Huntington Nursery Co. for sweet peas.

TWO EX-PRESIDENTS HONORED.

On Wednesday evening, March 6, one of the most enjoyable events for many years took place in Boston. Messrs. J. A. Pettigrew and James Wheeler, two ex-presidents of the Gardeners' and Florists' Club, were entertained at the Boston Club as guests of about fifty of the members of the Gardeners' and Florists' Club, and during the proceedings were each presented with a handsome piece of bronze statuary as a testimonial of the affection of the craft and the gratitude of the members for the unselfish, efficient work these gentlemen had done in the upbuilding of the club from the inaction into which it had been allowed to fall for some time previous to Mr. Pettigrew's election as its president.

The proceedings were under the management and direction of that eminent past-master in affairs of this kind, Edward Hatch. All the arrangements gave evidence of committee work of the most efficient sort, and the tables, mantles and walls were resplendent with orchids, roses, carnations and sweet peas donated by generous members. Mr. Hatch was in his happiest vein when he addressed Mr. Pettigrew, and in appreciative words presented him on behalf of the assembled friends with a bronze piece representing Instruction, and, later on, addressing Mr. Wheeler, passed him a like testimonial, the subject being "The Angelus." The recipients were given an ovation and severally endeavored to find words to fittingly express their appreciation.

Speeches were then in order. F. E. Palmer was introduced as an indefatigable worker who, when sure he is right, cannot be swerved. He spoke enthusiastically of Mr. Pettigrew's work for the club, his devotion to its interests and his lovable personality, and of Mr. Wheeler's tact, good nature and self-sacrifice as displayed when he took up Mr. Pettigrew's good work and carried it forward so successfully. J. K. M. L. Farquhar followed in like sentiment and enlarged upon the benefaction to the community and the craft such men always are. Wm. J. Stewart followed with congratulations on the club's renewed vigor, and predicted a still greater future for it and all other floricultural organizations if they will take for their keynote the two sentiments so well exemplified in the two testimonials and their recipients—Education and Devotion.

J. T. Butterfield gave good evidence of his versatility in a number of verses touching cleverly upon several of the gentlemen present, especially Secretary Craig, whose recent acquirement of twins was duly lauded. J. W. Duncan told a story and Secretary Craig recited "The Tragedy at Sloan's." James H. Morton eloquently spoke of the bond of friendship so strikingly demonstrated in this and similar occasions, and said that the great foundation for

success in such organizations is for every member to do his duty faithfully, sticking by the club in adversity as well as prosperity, and giving the young men plenty to do. Alexander Montgomery and Jackson Dawson each spoke interestingly and hopefully.

President Westwood extolled the spirit of the true gardener, the grand friendships engendered and the nobility attaching to his profession. M. H. Norton gave some interesting reminiscences, and then, after a vote of thanks to Mr. Hatch and his efficient committees, and patriotic singing and appropriate music by the orchestra, this memorable event came to a close.

LENOX HORTICULTURAL SOCIETY.

At the regular meeting held Saturday, March 2nd, the schedules for the June, August and fall exhibition were read and adopted. This being carnation night, it brought out some very fine exhibits, and the following exhibitors were awarded first prizes: A. J. Loveless for a fine vase of Robert Craig, F. Heeremans for Enchantress, A. McConnachie for Pink Lawson, and the same exhibitor winning for a vase of mixed varieties. A. H. Wingett staged a vase of stock Queen Alexandra which was much admired, some of the spikes being fully three feet in length, and was awarded a cultural certificate, also for two very fine vases of President Carnot and Richmond roses. I may say that Richmond is doing remarkably well up here, although we have had a very dull winter, and all the growers speak very highly of it. Three silver cups were offered and accepted by the society for competition at the fall exhibition: H. A. Dreer, Philadelphia, R. & J. Farquhar & Co., Boston, and E. Jaques of Lenox. The following firms have also donated premiums: Vaughan's Seed Store, A. T. Boddington, New York, Chas. H. Totty, Madison, N. J., Julius Roehrs Company, Rutherford, N. J., A. N. Pierson, Cromwell, Conn., Bay State Nurseries, South Abington, Mass., and Howard and Morrow, Pittsfield. Next meeting night March 16th.

G. INSTONE, Secretary.

GARDENERS' AND FLORISTS' CLUB OF BOSTON.

The next meeting, March 19, will be devoted chiefly to the carnation as a topic, and F. E. Palmer will open the discussion on its various phases. A large display of blooms is expected, and any exhibits sent from outside points will be duly cared for. On March 23 the first field day of the season is to be held at W. W. Edgar Company's establishment at Waverley, where the array of Easter plants will be a centre of attraction at that time.

NATIONAL CHRYSANTHEMUM SOCIETY OF ENGLAND.

At the recent annual meeting of this society the following gentlemen were elected to the offices mentioned: President, Charles E. Shea; treasurer, John Green; chairman of committee, Thomas Bevan; vice-chairman, E. F. Hawes; foreign secretary, C. Harman Payne; general secretary, R. A. Witty.

LITTLE JOURNEYS BY THE GINGER JAR MAN.

I.

The Dingee & Conard Co.

Once in a while the Ginger Jar comes down off its shelf and takes a little trip—not because it likes that but because a certain editor has an idea that travel broadens one; which may be very true if one happens to be run over by an automobile, but if one goes on the cannon ball express one is just as likely to get scattered. The forty-mile trip from the Quaker City to West Grove takes however two hours by the clock and there is absolutely no danger, unless the little worm-eaten West Grove station should happen to fall on you. It has been threatening to do something desperate these many years. Captain Lynch has to be very solemn and dignified inside that depot.

Every one has heard of the Captain of the Rough Riders of Chester Co. and his speedy horses. But the Captain had commandeered old Moses for this occasion and the guest was half way on Shanks' Mare before being met. Moses gets his name from having been foaled the same year that Moses struck the rock, so the venerable steed and its precious freight arrived in safety.

After modestly running the gauntlet of the bright eyes in the counting rooms the Ginger Jar was escorted with great courtesy by Edward Parker the chief of the operative forces through the greenhouses. Last year there were but seventy but there has been an increase—eight more this year—and it was enough to make one's head swim—the bewildering variety of roses of every conceivable clime and character from sturdy young ones of the mailing size to big robust plants of the two and three year olds—to review such a myriad and listen to the virtues and vices of each as expounded by Messrs. Lynch and Parker is about as interesting an experience as any one could wish.

Of course one looks diligently for all the shortcomings and secrets, especially in any house where the guides want to hurry past. The plausible reason given is usually, "Oh, there's nothing interesting in there," but being an ancient this jug is not deceived, and rolls nimbly in if the gates are ajar. In this instance however no "finds" were found.

In one house one hears there are no less than 35,000 young roses in 2 1-2 in. pots. That means, multiplied by eighty, nearly three millions of roses and the factory making more every day. The mill is emptying constantly and filling up again. Roses go everywhere by mail, even to the interior of China.

Of course, not being in bloom, one can say nothing of the roses themselves, but that is unnecessary for it is all put down in condensed form in the well-illustrated book of over 100 pages which the firm sends free everywhere. There are over a thousand named varieties in the collection and so expert do the growers become that they can recognize the variety by the foliage alone. One grower is said to know over 800 varieties but Mr. Parker can only tell about 500 and Mr. Lynch modestly owned to knowing but 300 by the foliage. According to

the prophet "I said in my haste; all men are liars" and the foregoing does sound like a bit of a whopper. But it was verified on referring it on the return to Philadelphia to D. T. Connor of the Lord & Burnham Co., who worked in the D & C greenhouses for nine years when a boy. At the end of that time his limit was 250; but he said others were much cleverer at it than he. Still one would like to see them do it and keep tab. You've all heard that old yarn about Sandy Macpherson's visit to London. On his return home one of his friends asked him what he thought of it. "Man," said Sandy, "it's a grand toon; but the folk there are no verra honest." "How's that?" "Weel, I had my doubts about it a' the week but I proved it when comin' awa'. I bought a package o' pins labeled 1000 for a penny and on counting them on the train comin' home I found them seventeen short." The merit of this yarn lies in its application to Messrs. Lynch, Parker and those other experts. Only—there is no proof yet but it sounds to an outsider about as wonderful a tale as the cuteness of Corney Rooney's pig which always disappeared the day before Quarter Day for fear he'd be made bacon of to pay the rent.

GEORGE C. WATSON.

CLUB AND SOCIETY NOTES.

The Scranton Florists' Club, will hold its first flower show in Guernsey Hall, Scranton, Pa., on March 15.

The Indiana State Florists' Association at its meeting on March 5 made preliminary arrangements for a spring show.

The eastern section of the New York Fruit Growers' Association met at Poughkeepsie on February 21, with a good attendance, interesting papers and fine exhibits. J. R. Cornell continues as president and E. C. Gillett of Penn Yan as secretary for another year.

At a special meeting of the Tri-City Florists' Club held at Fejervary Park it was decided to hold the annual banquet at Turner Hall, Davenport, Iowa, Monday, March 11, 1907. The annual meeting for election of officers for the ensuing year will be held at Fejervary Park, Thursday, March 14.

The Annual Proceedings and Bulletin of the American Rose Society for 1906 has come to hand. The report of the meeting and exhibition at Boston is given in full and a chapter from "A Woman's Hardy Garden" by Helena Rutherford Ely has been appended. The list of members contains 158 names, of which 43 are life members.

The nurserymen of the state of Connecticut met at the Hotel Garde, New Haven, on March 5th and formed a permanent organization to be known as Connecticut Nurserymen's Association, with the following officers: John S. Barnes of Barnes Bros., president; R. H. Gardener of Gardener's Nurseries, vice-president; Frank Elmer Conine of The F. E. Conine Nursery Co., secretary; and W. W. Hunt of Hunt & Co., as treasurer; Edwin Hoyt, C. E. Burr and E. F. Coe committeemen.

PHILADELPHIA NOTES.

John Westcott reports that his sojourn in the sunny south did him some good, but he is still far from his old self.

The executive committee of the S. A. F. meets at the Hotel Walton, Monday and Tuesday, 11th and 12th, to plan out the program for the August convention.

Dracena fragrans is in bloom with Christian Eisele at present. The Robert Craig Co. also has several of this species in bloom. The flower is fairly attractive and very fragrant.

A special feature of the Horticultural Society's meeting on the 19th inst. will be an address by William Kleinheinz, "A winter trip to Europe by an American gardener." This will be worth hearing.

William Munro of Garretford asserts that this has been the most unprofitable year for American Beauty growers ever experienced. We noted here two very fine houses of Kaiserin Augusta Victoria.

Chas. S. Grey, lately with the S. S. Pennock-Meehan Co., has transferred his allegiance to the Edward Reid establishment on Ranstead street. Mr. Grey is young, ambitious, and energetic. His many friends wish him well in his new move.

Jno. Lees of Frankford has built and opened a show room at Bridge and Main streets for the retail business. It is near his greenhouses, and also adjoins the show rooms of Kohler & Sons erected some years ago. Mr. Lees will build an addition to his greenhouses the coming spring.

Berger Bros. opened their new flower market at 13th and Filbert streets on Monday, and were kept busy all day receiving the congratulations of customers and friends, and incidentally hustling out the largest overturn of stock in their history. Room is to be made for a number of the old market renters or sub-tenants as soon as the lease in the old building expires.

On Wednesday the committee accompanied by a goodly delegation from this city will start for the Rose Show and Convention at Washington. Although roses generally are not up to last year's exhibition standard in this locality, it is expected that quite a number of our growers will contribute their best and help to make the show a success and no doubt will be rewarded by a prize or two, but in any event they are keen enough, most of them, to enjoy exhibiting for the sport of the thing.

SEND FOR ONE.

John C. Moninger Company, Chicago, are sending out a useful book of instructions for erecting greenhouses with their material. It answers in a lucid manner many of the questions regarding various problems that come up in the erection of greenhouses. Among the topics treated on are the ground site; painting; foundations and walls; wood posts; cast-iron posts; concrete, brick, stone or tile walls; sash; wood gutters; wall plates; iron gutters; ridge and sash bars; purlins; headers; ventilators; trusses; benches; glazing, etc. It is the intention of the publishers to dispose of these books at the nominal price of ten cents each, to cover cost of printing and mailing.

PHILADELPHIA, PA.

OBITUARY.

Annie Lonsdale.

The grim reaper has again cut a swath in the devoted family of Edwin Lonsdale. His last and eldest—Annie—died on Saturday, March 2nd, after a week's illness from pneumonia. The funeral services took place on Tuesday and were attended by most of the people prominent in the trade, the deceased having had a wide circle of friends and acquaintances outside her home life by whom she was held in the highest esteem. Ever since growing to womanhood Miss Lonsdale has been noted outside her home circle for business ability and shrewd common sense combined in a wonderful degree with a quiet and gentle manner.

She was the most active worker in the Grace Evangelical Union Church, was in the choir, was president of the Lutheran League, secretary to the Ladies' Aid and an active worker on Sunday School and committee work.

In addition to this she was the sunshine of her home and beloved by every one. The unexpected outcome of her last illness was a great shock to all, and the sincerest sympathy for the sorrowing family and relatives is universally expressed. Her parents have one consolation: they can look back on the brief span of life of that kind spirit and find a memory the ideal development of a perfect Christian womanhood, the bloom fresh and fragrant and ever dear to fond recollections even if cut off all too soon. Her memory will long remain green and sweet among all who knew her.

G. C. W.

Orson D. Munn.

Orson D. Munn, proprietor of the Scientific American newspaper, died on Feb. 28, in his 83d year, at his residence in New York. He was known horticulturally from his estate "The Terraces" a country seat of sixty acres, one of the show places of Llewellyn Park, Orange, N. J., where eight gardeners are employed during the summer under John Hayes, the efficient superintendent for the past 20 years, and by his frequent contributions to the shows of the New Jersey Floricultural Society of which he was a member and patron.

Mr. Munn designed and donated the spring with its landscape adornments at the entrance to Llewellyn Park where he was also instrumental in placing the statue of its founder Llewellyn S. Haskell as well as many of the unique and artistic features which surround his residence. He was a familiar figure upon train and ferryboat, frequently with a bunch of his Lawson carnations in his hand.

Herman C. Baartman.

Herman C. Baartman, senior member of the firm of Baartman & Koning of Sassenheim, Holland, 33 years old, a life member of the S. A. F., was drowned on the steamer Berlin off the coast of Holland, Feb. 21st, 1907. Only 14 passengers of the 143 on board were saved. Mr. Baartman was returning

from England where he had been on a business trip for the firm. Previous to this he had made 12 trips to the United States. He had lots of sincere friends in the trade and was known to be a good honest and reliable dealer in bulbs. The business will be carried on by his partner John Koning, who is traveling in this country now.

The Late Ferdinand Tschupp.

The obituary notes of this highly respected rose grower of New Durham, N. J., were published in our last issue. Since their appearance we have had communications from several members of the trade among them one

from Mr. Alexander McConnell of New York, speaking in terms of highest appreciation of Mr. Tschupp's many estimable qualities. The business at New Durham is to be carried on by his son Edward.

Other Deaths.

R. S. Forrester, colored florist of Richmond, Va., died on February 23.

John Lester of Ottawa, Kan., died on February 21, aged 89. A wife and six children survive him.

Mrs. S. W. Twombly died at her home in Winchester, Mass., on February 28, aged 84 years.

Sylvester Snell, for many years a market gardener in Watertown, N. Y., died on February 25, aged 79.

Franklin J. Ziegler of Pottstown, Pa., died on February 23, in his sixty-third year. A widow and one son survive.

James Maginnis, father of Mrs. Patrick Welch, died at his home in Dorchester, Mass., on March 4, aged 72 years.

Jonathan Aucock, for many years a successful florist of Utica, N. Y., died on February 15. Born in Shaith, Yorkshire, England, May 13, 1828, he came to this country in 1850 and located in Utica in 1867. He was president of the florists' club in that city for some time.

PERSONAL.

Mr. and Mrs. Robert Klagge of Mt. Clemens, Mich., are visiting in Chicago.

Louis Soldan of Elmira, N. Y., has taken a position with the Elm City Nursery, New Haven, Ct.

F. A. Herendeen, secretary of the Herendeen Mfg. Co., Geneva, N. Y., is reported as on the sick list.

William and Samuel Graff of Columbus, Ohio, have been in Chicago for several days attending the wedding of their sister.

A. Newell, recently with Mrs. Clark, Pomfret, Conn., is about to take charge of Lieut. Governor Draper's place at Hopdale, Mass.

Thomas Maybury, for nine years with E. J. Brockett of East Orange, N. J., has secured a place with Miss Coppell, Tenafly, N. J.

Adolph Greenbacker of Meriden, Conn., has returned after three months spent in Germany, Switzerland, and other European countries.

Louis Klees, of Kensington, Ct., is reported as seriously ill. He is in his eighty-third year. He was gardener for Abraham Lincoln at Springfield, Ill.

Ed Davies, formerly with the E. D. Jordan estate, Chiltonville, Mass., has taken a position as foreman under J. R. Shield at the Model Farm Greenhouse, Dalton, Mass.

Joseph A. Manda is preparing to celebrate his first Easter at his new quarters in West Orange, N. J. His real estate is said to have doubled in value since he acquired it.

The marriage of Charles W. Ashmead, of Stroud, England, gardener for Mrs. William Pierson of East Orange, N. J., and Miss Louise T. Newton of West Orange, took place on February 4.

Wm. C. Rust, gardener for Dr. C. G. Weld, Brookline, Mass., is just recovering from an operation for appendicitis, performed at the Massachusetts General Hospital. Mr. Rust is just able to be at work a short time each day at present.

We are pleased to announce that A. H. Kirkland, of Boston, who for the past three weeks has been critically ill with typhoid, is approaching the crisis of the disease with confidence on the part of his physicians that he will recover. Mr. Kirkland's position of State superintendent for suppressing the gypsy moth and brown-tail moths has made his name a familiar one.

A PROPOSITION WORTH CONSIDERING.

MORE EXPLICIT INFORMATION NEEDED.

Editor HORTICULTURE:

In a late issue of HORTICULTURE I note Mr. Hatfield's article on the Dosoris evergreens which I have read with great delight and benefit. To one living in a cold and uncertain climate that article conveys an immense amount of practical information, such information indeed as I find most difficult to get "from the books." It is exceedingly discouraging to a lover of shrubs and trees to find that a variety whose beauty, symmetry, habit of growth and other features have aroused his admiration and for which he has paid good money, and given good time and attention in its planting and care, at the close of its first winter is no more, all—all is gone; that it was not hardy and could not withstand the severities of the climate. Too little attention to this feature is given by dealers, nurserymen and scribes. Too many written articles, otherwise pleasing and instructive, are signally deficient on this point; yes, even more than that, are almost blamable for not plainly stating, "not reliably hardy" or words to that effect.

HORTICULTURE has been particularly fortunate in securing such an article as Mr. Hatfield's to follow the exceedingly instructive and entertaining papers of Mr. Hans. I trust that many more are yet to come.

C. W. HOITT.

Nashua, N. H., March 4, 1907.

PUBLICATIONS RECEIVED.

Wm. H. Moon Co., Morrisville, Pa.—Horticultural Art Book. Tells of Moon's trees. Well filled with lovely half-tone views and text matter such as the tree enthusiast delights in perusing.

Report of Jens Jensen, landscape architect and general superintendent; report of committee of the whole, regarding the donation of a site in Garfield Park and the appropriation of \$100,000 for the erection of a museum to house the Gunther collection of war relics; report of special meeting of West Chicago Park Commissioners.

The illustrated catalogue of F. W. Kelsey, recently to hand, is something more than a catalogue; it is in fact a reliable hand book for ready reference wherever trustworthy information on trees and shrub topics is desired. Both botanical and common names are given in the descriptions, and the alphabetical index is a great convenience; the height each variety attains at maturity is also a valuable feature. Another useful department is the selection of trained fruit trees and grapevines for vineries.

CARNATION COMMENTS

E. A. Stroud of Overbrook, Pa., gave a talk before the Florists' Club of Philadelphia on February 5, embodying his views on the Toronto Carnation Meeting, and his opinion of the varieties shown there and their respective merits. In the course of his remarks he said:

I am more than ever convinced that a line must be drawn between what may be termed the exhibition and the commercial carnation, just as we class our chrysanthemums. I want to impress members with the fact that the prize awards are very misleading. The question of how many flowers per square foot, and how these flowers are cut through the various months of the year, are facts which can be gained only through experience.

I will take the carnations in their colors starting with the white section.

Whites.

Alma Ward stood out prominently. It certainly is an exquisite flower and has improved considerably since shown at Boston. It is particularly adapted to the New York market, where it can command the price of which it is worthy. I suppose you noticed that this variety was awarded the silver medal; the gold medal was withheld because the judges did not consider any variety up to the standard required by a gold medal, and I might add that, taking all the exhibits, none was at its best, owing doubtless to the unfavorable weather all over the country the week previous.

White Perfection, well spoken of by many, is a fine, large flower, a good, clean white and an improvement over Lady Bountiful except in stem. I have some doubts as to its keeping qualities.

White Lawson comes such a poor color and so short-stemmed early in the season that it is not just all that is desired. The whites were poorly represented. I do not recall a vase of Lady Bountiful, which was so prominent at the Boston show. The general impression among the trade is that it lacks petallage, is neither early enough, nor free enough. There is a great opening for a new white and I wish some one would originate one to fill the bill.

A new white called Georgia looks as though it might be a good thing commercially. It does not have the size of White Perfection, but has a better stem and, I should judge, is a free bloomer.

The Reds.

Robert Craig still holds first honors, according to the judges. It is no doubt a fine red, and where a fancy

price can be obtained, it would be profitable to grow.

Beacon was well represented by Mr. Fisher, Cottage Gardens, and the Strafford Flower Farm. We think well of Beacon. The habit of the plant is similar to Enchantress and shows excellent breeding. It is free, healthy and of good size as to flower. I have heard some criticism as to its color. Personally I see no objection to it, as my experience with red carnations has proven that the orange-reds are better keepers and shippers and without the habit of bruising, as do Cardinal, Adonis and Flamingo. I am satisfied with Beacon and expect to grow a quantity next year.

Victory was not shown extensively. It has the same good qualities as Beacon in regard to its keeping qualities and color. If it has any faults it may be considered a trifle weak in stem and form of flower.

A new red of merit was a seedling from Bassett & Washburn. As I saw it on the table it looked like a good commercial variety.

Red Chief, exhibited by F. Dorner & Sons Co., while a good color, showed a weakness of stem which made it undesirable to me. This fault, I understand, was owing to the climatic conditions. I was informed that Lady Bountiful, when first shown as a seedling, looked much the same way.

Mr. Haines' red has done poorly at Strafford. If I could grow it the way Mr. Haines does it would be fine, but, unfortunately, I have not yet been able to do so; it does not feel at home at Strafford, and the difficulty looks to me like a question of soil. I saw it doing beautifully at Mr. Widener's place at Elkins Park.

In Pink.

In the class designated as the Scott shade of pink, Winsor was shown by the F. R. Pierson Co., in quantity and it certainly appeals to me. It is what is wanted in color and, while it may be slightly undersized, and may be a little short in stem, its freedom and color offset, to my mind, anything that may be said against it.

Winsome was one I did not examine closely. It seemed a pleasing shade and one that would be desirable. Dailledouze Bros. exhibited a pink sport of Lawson.

The cerise class, or Lawson shade of pink, was better represented than any other class. The great objection, it seemed to me, was the bluish cast most of them had. Two, the colors of which pleased me, were Afterglow and Mr. Weber's new seedling, Mabelle. Both of these arrived too late to be judged. Aristocrat is a fine, large flower. Its color did not strike me favorably. Perhaps I am too critical.

Dailledouze Bros.' new seedling, No. 348, which won the bronze medal, is

a large, fine flower, but, again, I did not admire the color.

Mrs. C. W. Ward was attractive. I understand Mr. Ward thinks so much of it that it is not to be put on the market.

Elsa Struss did not show as well as at Boston.

Helen Goddard looked good commercially.

Pink Imperial showed good flowers and probably the longest stems in the show.

Variegated.

In the variegated section was Helen Gould, a sport of Enchantress. As a novelty it will make a place for itself.

Toreador, by Weber & Sons Co., an improved Prosperity, has good form and much better stem.

Bay State or seedling No. 9, by A. Roper, is a much improved Mrs. M. A. Patten, and if a free bloomer should be a good thing.

Patten still holds its own.

Imperial attracted attention by its magnificent stems. It is a novelty pure and simple.

Other Varieties.

In the class for Enchantress shade of pink, Enchantress itself, so generally well known, hardly needs description. There is nothing to displace it. One competitor, by Baur & Smith, called May, was a better color, but undersized.

Some seedlings exhibited by F. Dorner & Sons Co., are worthy of mention. One, a scarlet, No. 305, I think will be heard from, also seedling No. 9,703, a maroon shade, attracted my attention.

I hope my remarks will be taken in the spirit they are meant. I have tried to give my opinion as the flowers appeared to me personally, and I trust no one will be misled by them.

CARNATION NOTES.

Two fine sports from Enchantress carnation presumably identical with Rose-pink Enchantress have favored at least two Washington growers this season.

Peirce Bros.' scarlet seedling Governor Guild is one of the most satisfactory and popular carnations of its color ever brought into the Boston market. It is a very large flower, averaging 3 1-2 inches across and has all the good points of a standard bloom.

Another scarlet of high degree is on the horizon, a Lawson seedling now in its third year, raised by Elijah A. Wood. In size and color it is all right. The stem is from 24 to 30 inches, very sturdy and covered with the blue bloom which makes such a pleasing contrast with a scarlet flower.

... OUR ... CARNATION NOVELTIES — For 1907 —

Winsor, White Enchantress and Helen M. Gould

ONE way to judge carnations is to see them on the exhibition tables. A better and more convincing way is to see them growing; therefore we cordially invite all carnation growers to visit us and judge for themselves regarding the superiority of the above-named sorts.

Our carnation houses are at **Scarborough-on-Hudson**, (not Tarrytown). Friends who desire to visit us can take the N. Y. C. & H. R. R. R. from New York. Trains leave there every half hour. Scarborough is the first station north of Tarrytown. Our grounds adjoin the station, and the greenhouses are about five minutes' walk from the station.

We are growing **25,000 plants of Winsor** for cut flowers, alone, for the new York market this season, which shows the faith we have in it. This will also enable visitors to see it growing in quantity, and besides that, will give us enough plants to get a great abundance of fine, healthy cuttings without over-propagating. We have already booked a large quantity among the large growers, and anticipate for this variety the largest sale of any new carnation that has ever been distributed, as large growers who have seen it are enthusiastic in regard to its value. Those who have seen it have immediately placed large orders for it, so we recommend those who have not ordered to place order without delay, so as to insure early delivery.

For full description of these three valuable novelties, see our wholesale price list.

Wholesale Prices Rooted Cuttings Spring, 1907

WINSOR.—Soft silvery pink. The best color, best keeper, best shipper, best seller—best every way. \$12.00 per 100; \$100.00 per 1000.

WHITE ENCHANTRESS.—Has the large size, long stem, productive habit of Enchantress, but is pure white. \$12.00 per 100; \$100.00 per 1000.

HELEN M. GOULD.—A beautiful sport of Enchantress. Ground color lovely shade of silvery pink, with very fine pencilings of carmine, making an exceedingly exquisite combination. While on close observation this variety is variegated, the general effect is one beautiful tone of dark pink. Exceedingly valuable, because it combines the earliness, freedom, long stem and large size of Enchantress, giving another color possessing all the other desirable qualities of Enchantress. \$12 per 100; \$100 per 1000.

BEACON.—Orange-scarlet. A vigorous, healthy grower, of ideal habit. A profuse bloomer, with long stems. \$12.00 per 100; \$100.00 per 1000.

ARISTOCRAT.—Cerise-pink. Will be planted largely in place of Lawson. \$12.00 per 100; \$100.00 per 1000.

MELODY.—Daybreak sport of Lawson, about the same color as Enchantress, but much brighter, and does not fade like Enchantress. Also a much better keeper and shipper. Those who grow the Lawson varieties exclusively will find this very valuable and desirable, because it gives an improved Enchantress color, which is so popular, and at the same

time can be grown in the same house with the other Lawsons. An extra fine thing in every way and in great demand. A great addition to the Lawson class. \$10.00 per 100; \$75.00 per 1000.

ROSE PINK ENCHANTRESS.—A sport of Enchantress. Color, dark rose pink. \$7.00 per 100; \$60.00 per 1000.

WHITE PERFECTION.—A novelty of 1906, and a variety for which there is a great demand this season. A third larger than Lady Bountiful and a more perfect flower. \$6.00 per 100; \$50.00 per 1000.

VICTORY.—Scarlet. This is giving great satisfaction, being a free blooming, profitable scarlet. \$6.00 per 100; \$50.00 per 1000.

RED LAWSON.—A fine red. Our stock of this is superior to many stocks of Red Lawson that we have seen. \$4.00 per 100; \$30.00 per 1000.

VARIEGATED LAWSON.—The most productive of the variegated sorts. A favorite. Outblossoms Mrs. M. A. Patten. \$4.00 per 100; \$30.00 per 1000.

WHITE LAWSON.—An excellent white. \$4.00 per 100; \$30.00 per 1000.

LADY BOUNTIFUL.—Pure white. \$4.00 per 100; \$30.00 per 1000.

ENCHANTRESS.—\$3.00 per 100; \$25.00 per 1000.

MRS. M. A. PATTEN.—\$3.00 per 100; \$25.00 per 1000.

MRS. THOS. W. LAWSON.—\$3.00 per 100; \$20.00 per 1000.

MABELLE

New Pink Carnation for 1907

Color—A peculiar shade of lovely pink, with a faint yellowish cast; several shades lighter than the Lawson. Unlike most Pinks, the brightest sun does not injure the color. Size—3 to 4 inches in diameter when established. Odor—Pleasing, but not strong. Stems—Invariably strong, but always graceful, ranging from 12 to 30 inches during the season. Habit, etc.—A very quick, active grower, making specimen plants in a short time, even from late cuttings. On account of its rapid growth, requires supporting very soon after benching. Gets away rapidly, blooms early and gives long stems right from the start. Productiveness—P. odious is the best word we know of to use here. It is the most incessant bloomer early and late, we have ever grown. Stock limited. Delivery January 5th to 10th and later.

Price \$12.00 per 100, \$100.00 per 1000

THE H. WEBER & SONS CO., Oakland, Md.

DON'T Be Afraid To Invest In

ROSE PINK ENCHANTRESS

It is both free and "fancy"—a sure money-maker.

SEED TRADE

The retirement from active business of Mr. E. L. Coy marks the end of a very honorable business career. Mr. Coy has been identified with seed growing in Washington County, N. Y., for over 40 years. He began when this county was an important factor in the seed growing industry of the country. For the past twenty-five years the chief items of seed growing in Washington County have been cucumbers, early varieties of sugar corn and seed potatoes. More or less onion seed was grown there until the growing of this important seed crop became concentrated in California, and until the growing of vine seed crops was largely monopolized by Nebraska, Washington County was the largest producer of cucumber seed of any county in the Union. When the prices paid the farmers faded until they reached the starvation figure of 10 cents per pound, Washington County lost much of its importance, though more or less has been grown every year by Mr. Coy for those seedmen who have always had a discriminating line of customers, wanting and willing to pay for a really superior article. When cucumber seed could be bought in Nebraska at 12 cents, Mr. Coy was receiving 20 and 22 cents, and these higher prices were not paid because of sentimental considerations, for the great majority of seedsmen are intensely practical, but because of superior quality, as Mr. Coy has for the past quarter of a century possessed the finest general line of cucumber seed stocks of any grower or dealer in this country.

A letter sent out by Mr. Coy announces that he has sold his seed stocks and good will to the Jerome B. Rice Seed Co., of Cambridge, N. Y., and it is only just to state that his mantle could not have fallen on more competent or worthy shoulders. This firm is even older in the seed growing business than Mr. Coy, having made a beginning upwards of 75 years ago, and has divided the honors with him since his advent into the field.

Possessing Mr. Coy's high grade stocks, there seems to be no reason why his successors should not inherit most of his business.

A report from Special Agent Harry R. Burrill, written from Sydney, furnishes information about catalogues and other printed matter sent through the foreign mails which will be serviceable to business men. He writes:

"Tons of American catalogues are destroyed every year by the customs authorities of Australia for the reason that business men here to whom they are addressed by manufacturers and exporters of the United States decline to pay the duty of 3d., or 6 cents in American money, per pound, assessed on them as advertising matter imported for distribution. This is a loss which can not be estimated in dollars and cents. Because of negligence or unfamiliarity with the tariff provisions of Australia these descriptive circulars, catalogues, and price lists generally fail to reach their destination, and consequently all opportunity for trade which might be obtained through their perusal is lost. This useless waste of money, time, and oppor-

tunity can easily be avoided if American exporters who desire to circularize the trade will discontinue their present methods and adopt a system that will insure prompt delivery and acceptance of their printed matter."

Most of the California seed growers have shaken the snow from their "goloshes," and hied them to the land of sunshine and flowers. Albeit, there is much moisture mixed with the sunshine and flowers at this season of the year, but as for ice and snow—well, one has to get above the line where the odorous leeks and onions grow to find them. One pilgrim from the Golden West, our genial friend, Chas. P. Braslan, still lingers, and braves the arctic temperatures, and as he claims to be fully booked up on the prospective crop of 1907, he must be searching for the North Pole, or some other equally alluring prize.

Hogg & Lytle of Port Hope, Ont., have established themselves in Port Huron, Michigan, where they intend to grow peas and beans on a large scale to supply their rapidly increasing trade on this side of the line.

The Greensboro Floral & Seed Co. is a new name in Greensboro, N. C., but the members of the concern are experienced seedsmen.

CATALOGUES RECEIVED.

Wm. H. Moon Company, Morrisville, Pa.—Wholesale list of ornamental nursery stock.

E. E. Stewart, Rives Junction, Mich. 1907 Trade Price List of Gladioli, Bulbs and Hardy Plants.

Wilfrid Wheeler, Concord, Mass.—Catalogue of northern grown Strawberry Plants and other small fruits, Asparagus roots, etc.

Eastern Nurseries, M. M. Dawson, Mgr., Jamaica Plain, Mass.—Wholesale Trade List, Spring 1907. A list of desirable ornamental shrubs and border plants.

Rennie & Thompson, Providence, R. I.—A handsome catalogue and, being the first publication of this young firm, a good starter for the career of "None-Superior Seeds."

John H. Sievers & Co., San Francisco, Cal.—Wholesale price list of new carnations, tuberous begonias, pelargoniums, etc. A portrait of the firm's prize introduction, Carnation Hannah Hobart, adorns the cover.

East Bridgewater Gardens, J. K. Alexander, Prop., East Bridgewater, Mass.—Catalogues of dahlias offered by the "Eastern Dahlia King." Twenty-seven acres of dahlias are to be grown the coming season by Mr. Alexander.

Arthur Cowee, Meadowvale Farm, Berlin, N. Y.: "The Gladiolus." An enticing little book with a handsome colored plate and numerous half-tone pictures. Mr. Cowee has a planting of one hundred acres of his beloved specialty each season, and his devotion for many years to the study and culture of the gladiolus has given him the prestige to which his industry and experience entitle him. The pamphlet we are noticing will find a host of appreciative readers.

BEGONIA BULBS

We have a very fine large stock of plump bulbs, of the most improved type.

CHILDREN'S GARDENS AND THE TRADE.

Editor HORTICULTURE:

I was very much interested in the article from the pen of Henry Saxton Adams in the last issue of HORTICULTURE concerning the relations of children's gardens to the horticultural trade.

For several years we have taken the matter up in our annual seed catalogs in a small way, trying to get the scholars and teachers of our public schools interested in the delightful and instructive work of horticulture. We have always been glad to make a special low rate on all kinds of seeds that were to be used for the purpose.

There are several charitable institutions in this State where for years we have furnished the children free of charge a liberal lot of seeds for their gardens, and we have been more than repaid after witnessing the pleasure they derived from these gardens.

We hope in a few years that an hour's garden work several times a week will be given to every child in our public schools. In these days to allow a child to grow up without planting a seed or rearing a plant is a crime against civilized society.

Truly yours,

WM. R. KIMBALL, Mgr.,
Pine Tree State Seed Co.

Cincinnati, Feb. 18, 1907.

Gentlemen:—Kindly discontinue my advertisements of Hanging Baskets as I am way behind on orders.

Respectfully,

F. W. BALL.

COMMENTS ON ROSES AT ELIZABETH PARK.

Although it is still a far cry to out of door rose time, a few notes as to recent additions to this famous rosary may be of interest.

Among Hybrid Teas, such comparatively new sorts as Richmond, Wellesley, and La Detroit have done splendidly, and for persistent, all-summer blooming, have easily proven their claim to greatness; another strong point in their favor is that they are sufficiently hardy to stand our winters with the same amount of protection as is given the Hybrid Perpetuals.

Of the recent European additions to this class, the following are worthy of mention:

Antoine Rivoire. Rosy flesh color on yellow ground, growth vigorous and erect, an ideal bedding rose.

Betty. Coppery rose, a vigorous grower, blooms profusely all through the season. On account of its unique color this rose is bound to become popular.

Captain Christy (Rose). Identical with the famous old variety except in color, which is a fine deep rose.

Crimson Crown. A fine flowering variety of vigorous growth, color deep glowing crimson, shaded white at base of petals.

Etoile de France. A decidedly desirable variety, color velvety crimson with lighter centre, a hardy strong grower.

Gruss an Teplitz. This sterling variety is not so largely used as a bedding rose as it should be. It is of hardy, rugged constitution and blooms continuously until the arrival of frost. The color is brightest scarlet and altogether we consider it one of the very best in its class.

Pharisaer. Rosy white, fine long buds, opening into large handsome blooms, a vigorous grower and will doubtless become a favorite bedding rose.

Several new comers in this class, such as George Laing Paul, Lady Wenlock and Lady Ashtown have not yet been sufficiently tried out in our latitude to enable us to speak definitely of their merits.

Within the last few years the Hybrid Tea has rapidly advanced in public favor and it would seem that in all public gardens or where continuous display is important, this is unquestionably the rose of the future. The only possible objection to the Hybrid Tea as a bedding rose is that some varieties are rather tender to withstand our Eastern winters and it would seem that American hybridizers, with this fact in view, are steadily introducing hardier blood.

Among Hybrid Perpetuals of recent introduction, the varieties worthy of special mention are:

Frau Karl Druschki, snow white, flowers large and beautiful, a hardy, vigorous grower and one of the most continuous bloomers in this class. The bed of "Frau Karl," contains about thirty plants and it attracted more attention than any other variety in the garden.

Hugh Dickson, shaded scarlet, and **Hugh Watson,** bright crimson, are noteworthy as being free flowering and vigorous growers.

The dwarf Polyantha or fairy roses deserve special mention on account of

Spiraea Gladstone, large bushy plants, 6 and 7 inch pots, 50c., 75c., 1.00 each.

Spiraea superba, 6 inch, 25c. to 35c. each.

Cineraria hybrida, 6 inch pots, all shades, 3.00, 4.00, 5.00 per dozen.

Hydrangea Otaksa, 6 and 7 inch pots, 50c., 75c., 1.00 each.

Crimson Rambler, Roses, 6 inch pots, 3 ft. high and over, 1.00, 1.25, 1.50, 2.00 each.

Hyacinths, all shades, 4 inch pots, 12c.

Touresol Tulips, 3 plants in a 4 inch pot, 12.00 per 100 pots; 1.80 per dozen.

Double Von Sion Daffodils, 3 plants in a 5 1/4-6 inch pot, 2.50 per dozen pots.

Araucaria excelsa, 6 inch pots, 6, 7 and 8 tiers, 1.00, 1.25, 1.50 each.

A. excelsa glauca, 6 inch pots, 5 and 6 tiers, 1.00, 1.25, 1.50 each.

A. compacta robusta, 7 inch pots, 30-35 inches high, very fine, 2.00 to 3.00 each.

Specimen glauca, 7 inch pots, 3.00 each.

Please mention if pots are wanted. Cash with order please. All goods must travel at purchaser's risk.

GODFREY ASCHMANN, 1012 Ontario Street, Philadelphia, Pa.
Wholesale Grower and Importer of Pot Plants.

their hardiness and free flowering qualities. They are used here extensively for both bedding and underplanting. Some thirty varieties are grown, the best of the newer sorts being Eugenie Lamesch; orange yellow, shaded rose; blooms in great trusses; a novel and really desirable variety.

Kleiner Alfred. Bright red, suffused yellow, a beautiful and unique addition to this class.

Leonie Lamesch. Bright copper red with golden centre, flowers produced single, distinct and beautiful.

The much lauded Baby Rambler belongs to this class, and as a perpetual bloomer it is certainly all that is claimed for it. The Polyanthas as a family, possess many excellent features and well deserve a place in every rose garden.

Of trellis roses, not to mention the indispensable Crimson Rambler, the following sorts are valuable here:

Carmine Pillar. Rosy carmine, flowers single, large and very showy, remains in bloom about six weeks.

Dorothy Perkins. Soft bright pink, a hardy, vigorous climber. On the arches here this fine variety produced shoots 24 ft. long in a single season and these wonderful growths wintered perfectly.

Helene, a seedling of Crimson Rambler and an even stronger grower than the parent; flowers large, delicate violet.

Lady Gay, Hiawatha and Wedding Bells are excellent, being vigorous growers and perfectly hardy.

Leuchstern, Philadelphia Rambler, Psyche and Rubin are also good and

make a very fine showing on the trellises.

ALEX CUMMING, Jr.

BUSINESS CHANGES.

W. R. Conover has purchased the business of T. A. Butler, Shawnee, Okla.

Miller & Cowgill, Alliance, O., have dissolved partnership, and the business will hereafter be carried on by Mr. Miller. Mr. Cowgill has leased the Bonsall greenhouse at Salem, O.

The East Liverpool Potteries Co. (Ohio), formed in 1900 with a capital stock of \$1,000,000 was dissolved at the stockholders' meeting on January 17. The stockholders will divide their interests between the U. S. pottery at Wellsville and the Globe pottery E. Liverpool.

Nephrolepis Whitmanii, strong plants from 2 1/4 in. pots, \$10.00 per hundred.
Nephrolepis Elegantissima, 2 1/4 in. pots, \$5.00 per hundred.

NEWS NOTES.

W. C. King, Albany, N. Y., expects to be in his new quarters at 24 Steuben street on March 15.

James A. Blaisdell has taken a greenhouse in Fall River, Mass., and will be ready for business shortly.

The two hundredth anniversary of the birth of Linnaeus is to be celebrated in Upsal, Sweden, next May.

F. H. Kramer has offered a \$50.00 cup to be bowled for by the visiting and local florists at Washington on March 15.

The firm of Frank A. Main & Co., composed of Mr. Main and Charles H. Barrett, Concord, N. H., dissolved on February 27.

Prompt action saved the new greenhouse of Leon E. Winn, Hudson Bridge, N. H., from destruction by fire last week.

William C. Gloeckner has opened a florist store at 97 State St., Albany, N. Y. Thomas T. Tracy will be connected with the business.

A fire which might have proved disastrous but for early detection occurred in the store of H. Barton, Westfield, Mass., on February 24. The slight loss was covered by insurance.

Gustave Drobish, the oldest florist in the trade at Columbus, Ohio, has been sued for \$500 damages; it being claimed that the smoke from the chimneys of his greenhouses has blackened the walls of the house and polluted the cistern water, of one of his neighbors. The craft here are watching the outcome of this suit with much interest.

Among the most striking floral pieces this year, was one recently made for the Letter Carriers' Association of New York and Brooklyn and presented to members of Congress on

their departure for Panama, in recognition of the increases of salaries lately granted the letter carriers of New York and Brooklyn. The design which was made by Foley of New York was a magnificent "horn of plenty" artistically decorated with over five hundred American Beauty roses, a thousand violets and many other delicate flowers interwoven. The design was over six feet in height.

"How to Cultivate and Care for Decorative Plants for Adornment of Our City and Suburban Home" is the title of a neat little pamphlet being sent out by Alexander McConnell, Winsor Arcade, 571 Fifth avenue, New York. It supplies the information so often sought by the purchasers of house plants in a plain, concise form, and is a good model for imitation by retail florists everywhere.

Cut Flower Market Reports

BOSTON

The flower market of Boston is in a very demoralizing state at present and prospects are not particularly favorable for any immediate improvement. All crops, with the single exception of American Beauty roses, are on the increase, and most of them are already far beyond all reasonable proportions. Roses are more abundant and cheaper than at last report. Carnations are very much overstocked and top figures on special grades are maintained under difficulty. Violets are selling more disadvantageously than at any time during the past year. Tulips, daffodils and Dutch bulb stock generally are in bad straits, and lily of the valley goes slow. Lilies are increasing in supply and selling slowly. Sweet peas are a veritable drug, although the quality is superb as a rule. Narcissus poeticus ornatus are now in and are sold with difficulty at 50 cents to \$1.00 per hundred.

The weather the past week has been fairly clear averaging considerable warmer than heretofore.

BUFFALO

Business not flourishing but an enormous supply of stock was received. Carnations and bulbous stock especially tulips and daffodils overflowing and much of this was moved at prices away below quotations, and many retailers instituted bargain sales on Friday and Saturday at values not encouraging for bulb growers. Carnations also suffered, especially Lawson and the ordinary quality, while the fancy had a hard road to travel. Teas, Richmond and Liberty are now fine but not too plentiful but the shorts are too many at times. Prices on Beauties have been holding wonderfully well; the growers with few exceptions say that Beauty has not paid for the past two months, they being off crop continually and the shipments in consequence have been very small. Many of the stores are complaining of trade being dull because of Lent, but on the average they have to be satisfied with a little floral work now and then. The quality of valley has not been better for some time but no demand, the same with lilies which are carried along from day to day hoping for "demands." Violets are in full swing but prices have been low. All in all the past two weeks have been the worst we have had in some time.

COLUMBUS

Business continues as good as ever but, as outlined last week, prices have begun to give way but the best florists are maintaining prices in good shape; in fact, they must on the best American Beauty and other roses as these are in very short supply. All the craft have already begun to make plans for Easter, and that a great trade will be done this year there can be no ques-

tion. The seedsmen are getting busier and busier; it is now only a question of getting the orders out fast enough.

DETROIT

Trade has not been very encouraging since last report. Everybody's carnations seem to be in crop just now, and a glut pure and simple is the result. Roses are still scarce and holding prices

well. Violets are plentiful and bulbous stock joins hands with carnations. Smilax and ferns are hard to obtain. The outlook for Easter lilies in this vicinity is good and as March is starting in with a good snow storm the hopes for good Easter weather are rising. The same may be said of bulbous stock and violets, but a shortage in carnations and roses seems to be an assured prospect.

INDIANAPOLIS

Trade is slower than a week ago, funeral work constituting the bulk of the business with the retailers. Flowers are much more abundant with the single exception of roses which still continue scarce. Beauties especially are not yet sufficient for demands and prices hold up remarkably well. Killarney and Richmond are of fine quality and maintain their popularity. No particular change of prices in anything is noted. Bulbous stock is in large supply, but there is no glut as in previous years. Sweet peas, lilies, callas and other seasonable stock are in sufficient supply to meet all demands. Smilax adiantum, plumosus and Sprengerii are in special demand with inadequate supply.

NEW YORK

Business is very quiet; the market is well supplied with carnations and all roses except Beauty. Carnations are very plentiful and cheap. Yellow bulbous stock is a glut, and cannot be cleared at any price. Violets are now in larger supply than at any time during the season and are moved with difficulty as the best trade is using very few. Ordinary grade gardenias are far too numerous to command anything approaching a steady price. Shipments of sweet peas, freesias, stocks, daisies, etc., are getting heavier daily.

PHILADELPHIA

Market here last week in favor of the buyers nearly all along the line. Stock piled up daily but a glint of mild weather on Saturday gave an outlet which helped

The New "Market"

..Opening Announcement..

¶ Messrs. Berger Bros., beg to announce the opening of their new store at 1305 Filbert St., (the old Dumont place), where they will be pleased to greet their old friends and customers, and extend to them the courtesies and facilities of an up-to-date commission house. They also wish new connections—both in buying and selling—and respectfully solicit a visit or enquiry. Their motto:

"Good service and a square deal all round."

Try the New "MARKET"

BERGER BROS., Wholesale Florists
1305 Filbert Street, **PHILADELPHIA**

to clean up the surplus fairly well and gave the street men their first good day for many weeks. Both roses and carnations eased up in price with quality about normal. Beauties have improved slightly but are still scarce. White roses are also more plentiful. Violets although low in price are selling well. Orchids are scarce. Lily of the valley too plentiful and quite draggy. Sweet peas are of extra fine quality at present and immense quantities of same are being disposed of. Other staples remain about as last week.

Lent so far has not cut much figure with the trade in general.

TWIN CITIES

Stock is plentiful, and a decided oversupply on carnations of medium grade, which have fallen into the hands of the Greeks, and have been sold at low prices. Easter plants especially azaleas, spireas, and Baby Ramblers are in evidence with the retailers; they all carry more or less no doubt for the purpose of inducing Easter orders, but it seems a little too early as no Easter business has as yet been placed. The arrival of the warm weather has greatly increased the demand and bulb stock is moving satisfactorily.

FIRE RECORD.

E. Cartwright of Wellesley, Mass., lost three of his greenhouses by fire on February 28.

J. W. Adams, Normal, Ill., suffered serious loss from fire on February 22. Of his three well-filled houses only a small part of the stock was saved. No insurance is reported.

A fire which broke out in the office of the Lutey Floral Co., Chassell, Mich., destroyed that building and the boiler room. The greenhouses were saved but the plants were frozen as no heat was obtainable.

L. Schiller and Geo. Asmus lost heavily by fire in their store at 660 W. Jackson boulevard, Chicago, on February 21. The business has been transferred to the main store, 897 Madison street, until repairs are made.

SOUTHERN WILD SMILAX

We are booking orders now for future delivery for Fancy Greens and Beaven's Fadeless Sheet Moss. Write for Samples.

NEWS NOTES.

A bill is before the Legislative committee on agriculture providing for the erection of a horticultural building and greenhouses for the Connecticut Agricultural College.

Chas. Plumb of Detroit, who after waiting almost a half year for permission from the common council has at last been allowed to cross the street with a steam pipe line and will now commence to add 25,000 feet of glass to his establishment.

A. Hans of Stamford, Conn., has a handsome specimen seedling fern, the result of a crossing between *Blechnum Brazilienses* and *Lomaria gibba*, made by him. The same cross had been previously made in England. This plant shows abundant spores.

On March 12 promptly at high noon auctioneer Wm. J. Elliott will lift up his voice in supplication at 201 Fulton street, New York, and the spring auction season will once more be on. Roses, nursery stock, valley clumps and other good things will be there and you get them at your own figure.

M. Maurice de Vilmorin has just published a list of certain trees and shrubs which he has to offer to public gardens and individuals in exchange. This list comprises more than 100 sorts, for the most part new and rare. All enquiries should be addressed to the Fruticetum des Barres, par Nogent sur-Verneisson, Loiret, France.

GEO. STEENGROFE

IRVINGTON ON HUDSON, N. Y.

FOR SALE—Greenhouse Pipe

4-in. boiler tubes, second hand, in fine condition, absolutely free from scale and with ends cut square. Sample and prices on application. Kroeschell Bros. Co., 35 Erie St., Chicago.

1000 IDEAS

are contained in that little booklet of ours and you will find it a gold mine of information. It tells in a simple, plain way all about greenhouse erecting, how to build benches, how to glaze, all about painting and just how every piece is nailed. It will show you how to have a perfect greenhouse and is worth its weight in gold to every florist who has greenhouses or ever intends to build one. There are only a few of these booklets and you should get one now—they can be used with any kind of material but if you use ours we will send you one free. Write for one today, enclosing ten cents in stamps to cover cost of mailing, postage, etc. Address,

ANNOUNCEMENT

The King Construction Company of North Tonawanda, N. Y. and Toronto, Ont., in response to numerous inquiries by mail states that the trussed roof greenhouses which collapsed at Mr. Farenwald's place near Philadelphia were not of the King Construction design or construction. Moreover a number of King houses in the same neighborhood passed through the same weather conditions without any damage whatever. Also the King Construction Company has just received an order for two trussed roof greenhouses each 500 feet long and 28 feet wide which are to be built for Mr. Victor Groshens on his place which is only a couple of blocks from Mr. Farenwald's place. Owing to having introduced the trussed method of greenhouse construction and to having been identified with it so long, the King Construction Company finds it necessary to make this announcement as a matter of self protection.

KING CONSTRUCTION CO.

N. Tonawanda, N. Y.

Toronto, Ont.

This roof covers 28 benches each 4 ft. in width.

Extract from a Letter Received from the E. G. Hill
Co., Richmond, Ind.

"The wood is all up and we are ready for glazing; everything
fits admirably and we had no more trouble with the irons after be-
coming familiar with the methods of building. Everything is pro-
gressing nicely and we are much attached to the King Gutters, and

we think that the next time we build we will use the entire King
Construction."

Yours very truly,
Signed, THE E. G. HILL CO., Per F. H. LEMON.

I am very much pleased with my greenhouses and you may refer
anyone to me as to your method of construction &c.

WALTER P. STOKES, Moorestown, N. J.

Our Standard Widths of Greenhouses Run from 14 ft. to 150 ft.

TEN YEARS EXPERIENCE
In Building Trussed Roofed Greenhouses

Our Houses are built to CARRY MORE SNOW than the glass will carry.

GET ON THE INSIDE of one of our Iron Frame houses, take a look at those small Roof Bars and see that they stop at the Vent Header instead of continuing to the ridge, doubling the shade of the sash. Look at those Rafters, a span of iron from ground to ground on either side.

See how the Eave is equipped with our patent Ice-Cleaning Eave Plate and the way the Bar Clasps hold and strengthen the roof. Then think that two small Pipe Columns are all that are required; combine all these things with the durability, the last foreverness of the whole thing and you can then understand why our Iron Frame Construction makes such a wonderful house; why it's the cheapest proposition in the end. It's the best house yet for you rose growers. Send for Iron Frame Circular—it is filled with whys and cold facts. **Lord & Burnham Co.,** *Greenhouse Designers and Manufacturers,* 1133 Broadway, cor. 26th Street, N. Y. Boston Branch: 819 Tremont Building.

IT'S a strong combination, that of uniting the rafter and the sash bar in one—a combination that has done more to revolutionize greenhouse building than anything that has happened since the introduction of the iron frame. U-Bar green-

houses are the best greenhouses built because it's the only construction combining sash bar and rafter—that actually strengthens the house, while decreasing the shade. There's no house as productive. Send for catalog. **Pierson U-Bar Company, Designers and Builders U-Bar Greenhouses,** Metropolitan Building, Fourth Avenue and 23rd Street, New York.

Galvanized steel U-Bar. Every two feet it is screwed to core.

Cypress core which is chemically treated against decay.

The roof-bar-rafter-U-Bar in one thing. This is half size.

CARNATION WINSOR

We have not advertised Winsor until now because we have not had to. It is so good and its merits have been so generally recognized that it has practically sold itself. Our advance orders were very large, and we did not feel the necessity of advertising it until we were in a position to fill and take care of our early orders. We are now nearly caught up with our advance orders and have a fine lot of stock on the cutting bench, so that we can promise, for the present, February delivery on orders received within a short time at least.

If you have not already purchased a stock of this, you should lose no time doing so. We are going to sell more Winsor than has ever been sold of any novelty that has ever been put on the market. Its merits and value are now so well established that one is not buying a chance. We are cutting and shipping right along between one and two thousand flowers a day to the New York market, where our flowers are sold.

There is nothing on the market that approaches Winsor to-day in carnations. It is the best seller on the market, on account of its lovely color, fine stem, perfect calyx, and fine keeping and shipping qualities—in fact, in this regard it covers every necessary requisite as a market variety.

From a growing standpoint, it leaves little to be desired. It is unusually healthy, very vigorous and productive, and, we think, the most profitable carnation ever introduced. This may seem high praise for a carnation, but it is no exaggeration. Winsor gives a large percentage of high-quality flowers. It practically does not split at all. Notwithstanding the fact that we have had the darkest, dullest winter we have ever had, when the Enchantress and Lawson types are splitting badly all over the country with every one, we have not had one-half of one per cent. of split calyxes or Winsor—in fact, we seldom see a split calyx. Hundreds of visitors who have been at our Scarborough place will substantiate this statement, extravagant as it may appear.

Any one who fails to plant Winsor this year will regret it. Rose Pink Enchantress is good, and a good many other varieties are good, but if you want the winner, plant Winsor.

We not only have a good thing in Winsor, but we are delivering good stock. As a sample of the testimonials that we are receiving, see this space in last issue. We are trying to give 110 cents on the dollar, and guarantee to please everybody with the stock sent out, or we will not ask you to pay for it. We have still to receive our first complaint, and we have shipped between one and two hundred thousand cuttings to date.

STRONG ROOTED CUTTINGS, February delivery, \$12.00 per 100, \$100.00 per 1,000.

MABELLE

New Pink Carnation for 1907

Color—A peculiar shade of lovely pink, with a faint yellowish cast; several shades lighter than the Lawson. Unlike most Pinks, the brightest sun does not injure the color. Size—3 to 4 inches in diameter when established. Odor—Pleasing, but not strong. Stems—Invariably strong, but always graceful, ranging from 12 to 30 inches during the season. Habit, etc.—A very quick, active grower, making specimen plants in a short time, even from late cuttings. On account of its rapid growth, requires supporting very soon after benching. Gets away rapidly, blooms early and gives long stems right from the start. Productiveness—Prodigious is the best word we know of to use here. It is the most incessant bloomer early and late, we have ever grown. Stock limited. Delivery January 5th to 10th and later.

Price \$12.00 per 100, \$100.00 per 1000

AZALEAS FOR EASTER

Now is the time to get Azaleas. Our plants are shapely and well budded. We offer the following varieties:

Mme. Van der Cruyssen, *Deutsche Perle*, *Mme. C. Van Langenhove*, *Vervaeana*, *Empress of India*, *Bernhard Andrea Alba*, *Helen Thielman*, and *Simon Mardner*. A fair proportion only of *Mme. Van der Cruyssen* and white sorts supplied with each order.

Prices, (f.o.b. New York): 10 to 12 inch heads, \$6.00 per doz., \$45.00 per 100; 12 to 14 inch heads, \$7.00 per doz., \$55.00 per 100; 14 to 16 inch heads, \$10.00 per doz., \$75.00 per 100.

Abnormal Boston Ferns from Spores

Herewith are photographs of Boston ferns raised from spores from *N. Piersonii*. I have two plants that have been selected from a batch of seedlings, being the only ones affected. They are in their first year and first fronds; the two last growing ones are two and a half feet long by eight inches broad and are not fully developed. The two plants are of very strong and broad constitution and quite different from the other new varieties.

The photographs do not show the details of the fronds well. No. 1 has the leaflets flat while No. 2 has them more curled. Until the present time they have shown no signs of a tendency to revert to type; they are making their runners and bud growth; what the young plants will be cannot yet tell.

If anybody else has already raised some from spores it would be interesting to compare notes; as a fact generally plants raised by spores from *N. Piersonii* turn out to be common Boston ferns, and I would not be surprised if these were the first abnormal Boston ferns raised from spores. Without proof to the contrary I presume that all the American decomposite bi- and tri-pinnate forms of *Nephrolepis exaltata* which descend from *Piersonii* have been raised as that variety was, from bud sports. The runners that bear buds grow from the base of the fronds and it may be logical to say that runners growing from the base of abnormal well-characterized fronds will produce better character-

ized plants than those growing from the base of normal or partly affected fronds and from the first ones sports are liable to occur.

There is a doubt as to whether *Nephrolepis elegantissima Whitmanii* and the others will bear sports; they may be barren, but should they accidentally do so by seeding and with careful selection among the progeny, there will doubtless be found some plants that will be more vigorous and certainly will be a further departure in the direction of new strains of diverse and constant forms of the Boston fern.

Culture of the Amaryllis

(CONCLUDED.)

From six to seven weeks is the usual time required to bring the amaryllis into flower, when in a dormant state. These yearling plants can hardly be expected to be had in flower in good form as early as Christmas, but any time from the first of February onward they will flower as readily and as satisfactorily as the narcissus or hyacinth (providing they did not loaf in their growing time). Such treatment as is given to other bulbous flowering plants where successfully grown, is all the amaryllis requires. Many amaryllises flower before their leaves appear, which is somewhat detractive. Now, here is something worth remembering. When the plants are brought out of their resting places, to start in to growth, if a five-inch pot with a hole an inch in diameter is placed over the top of the bulb until the new leaves reach to the hole, and then removed, the leaves will continue to grow and by the time the plant is in flower the leaves will be nearly fully developed. [When we grew hyacinths this pot covering was never omitted.]

Clear off all old leaves and see that each pot is thor-

oughly watered before starting into growth. Any bulbs that are apparently too small to flower should be kept dormant until planting time when they may be treated the same as the young plants or they may be plunged out in pots, lifted last of August, rested and prepared to flower at Christmas. Amaryllises are as easily retarded in cold storage as any other bulb.

The general way of propagating, hitherto, has been by sowing the seed as soon as ripe and carrying them along in pots until they flower, sometimes three years, and often longer; or by offsets from mature bulbs, and in some instances the old bulbs are subjected to the same treatment as are hyacinths for the increasing of any particular variety. These plans are undoubtedly safe ones but they are slow and expensive. As to details of treatment—those acquainted with ordinary greenhouse culture will have it at their finger ends.

EASTER NUMBER NEXT WEEK.

Fighting the moths The passage of the appropriation of \$150,000 by Congress towards the work of checking the spread of the gypsy moth will be hailed with satisfaction by all those who know anything of the circumstances. It is estimated that during the past twelve months over \$750,000 has been expended by the state and citizens of Massachusetts in the struggle against the dreaded pest and so it is likely to be for some years to come. New

England, and New York, which is likely to be the next state attacked, have always, with good reason, taken great pride in the magnificent trees which adorn their villages and it is a dreadful calamity which now menaces them. Let every one do all in his power to help win the fight.

Effects of the winter

There are indications of serious injury to rhododendrons and other broad-leaved evergreens by the severe winter which they have had to endure and the final outcome, which cannot be determined for several weeks yet, is anxiously awaited. For unrelenting, boisterous inclemency the winter of 1906-1907 will long be remembered as unparalleled in the experience of most people, at least in the northern and eastern section of the United States. The effect of such weather on all hardy garden material is dependent in a great measure, however, upon fall conditions of sap flow and ripening of wood and it may yet transpire that Nature took a hand last fall in preparing her family for the ordeal which was in store for them. In most sections there has been a good covering of snow during the period of lowest temperatures and that is something for which we should all be deeply grateful.

A discredited practice

Has the newspaper reporter been around yet to get pointers regarding the Easter prospects? If not, you may look for him any day now. A word of advice—*don't* fill him up with stories of scarcity and predictions of high prices. Too much of this has been done every year and no one can tell what the direct loss to the flower business has been from this senseless, almost suicidal habit which so many florists have contracted. Tell the inquirer that there will be no difficulty in supplying him with all he requires for his Easter flower gifts at reasonable prices. Fill the newspaper reporter with the enthusiasm of an approaching floral holiday such as has never before been seen; convince him that there will be good lilies and an abundance of them and that nobody need forego the pleasure of the possession or the giving of a flower because of scarcity or high prices. Don't frighten away your best friends with that discredited old bugaboo of Easter famine.

Get in line

Civic associations and periodicals are doing good service in the dissemination of literature aiming to educate the public taste and inspire a better appreciation of plants, trees and flowers about city and suburban homes. The effect is seen in the tidying up of yards, the more general planting of flowers, and a willingness to expend money for public parks and playgrounds. In all this the horticultural profession is a direct beneficiary and, as such, apart from his equal participation in the general benefit, it would seem very becoming, as well as expedient, that the florist and gardener should take an active part in any movement tending so much to his own advantage as this horticultural educational work certainly does. Our older florists' clubs, those well and permanently established, might now do well to take a respite from their time-worn discussions of commonplace trifles of daily practice on which most of their members are already sufficiently informed, and rise to the consideration of themes and activities which will draw within their influence, and secure the interested support of, the most intelligent and progressive element in the craft.

Dendrobium thyrsiflorum

(See Frontispiece.)

The position of first place among orchid species is claimed, by many orchidists, for some favorite and it is usually the case that their choice is determined by the degree of success attained in bringing that particular species up to a high state of cultural perfection. Of course it is impossible to determine what orchid is the best or most useful, as that depends entirely upon the use made of it, but I believe I will have many ardent supporters in the statement that, for conservatory decoration at least, a well grown specimen of *D. thyrsiflorum*, such as the accompanying illustration shows, stands very near the head of the list. This plant was raised by the writer at the Missouri Botanical Garden, and will go far to show that the specimens raised in botanical gardens are not as microscopical as is usually supposed.

D. thyrsiflorum is seldom seen in large specimens, as they are often neglected before attaining large size. The species grows with considerable ease and if a few cardinal points are borne in mind, success will be attained. *D. thyrsiflorum* is a Burmese orchid and requires extreme heat during the growing season. It is not a deciduous dendrobium and although it should have a very decided resting period, yet it should not be allowed to lose all of its leaves. A good rule to follow is, to allow it to drop all of the leaves made prior to the current year's growth. When the eyes begin to swell, water should be given in gradually increasing quantities, applied, not at the roots, but by briskly syringing the dry canes to help the flower buds break through.

One of the peculiar features about the culture of this orchid is that the same number of blooms are not produced each year. It is usually the case that after a year of heavy flower production, there will be a short crop, and so on in alternate years. This is because some flower spikes are produced from wood three years old, and in a heavy crop all the latent buds produce flowers, hence the short crop in the succeeding year.

The hot summers of this country, and particularly in St. Louis, make ideal conditions for all hot house orchids, such as dendrobiums, phalaenopsis, catasetums, etc., while, on the other hand the beautiful cool orchids, such as odontoglossums, masdevallias, and other little gems are usually short lived, and it is for this reason that so few of this class are to be found in the extensive collection of orchids of the Missouri Botanical Garden, which numbers about one thousand species and varieties among which are some unique specimens. It is often the case that the tiny and little known orchids lay claim to being the most beautiful.

George E. McClure

The Apple Orchard

After the trees become dormant it is an excellent plan to utilize some of the spare time that falls to the lot of all in agricultural lines during the winter to put the orchard into shape.

In pruning old trees that are bearing fairly good crops but have never been cut before, it is not advisable to remove large limbs, sacrifice much wood, or inaugurate some great change of policy. In trees of this kind winter pruning will consist in a judicious thinning of the thick portions by cutting out branches which cross

or those which bear little fruiting wood,—fruit spurs,—and in opening up the head to admit air and sunshine.

There is always a tendency to cut off too much wood below and not enough at the top of the tree, so that in time it becomes too high, the fruit being borne up in the topmost branches, difficult to spray and hard to pick. Old dead branches must be removed. The best cut for these and for large branches is one made parallel to the remaining limb or the trunk—depending on what is cut off—sawing through the “shoulder” at the base of the branch. This exposes a larger surface than a cut made at right angles to the branch, but it will heal over much more rapidly. Above all do not leave a stub projecting, for this in decaying will leave one of the finest spots for blight infection possible.

On many of the trunks and large branches rough, uneven, broken-down patches are often found. I refer to the familiar canker spots, caused by a fungus (*Sphæropsis malorum*), which also causes the black rot of the fruit. When found these should be cut out, going back to solid wood and thoroughly scraping off the bark. All cuts of one-half inch or more in diameter and all places where canker has been removed should be painted with some good lead paint to guard against infection.

Where much fruit rot, leaf spot, or scab abounds, raking up and burying or burning the dead leaves and old fruit will lessen the damage done by these troubles.

A very important part of the work is the examination for the various scales, especially the San Jose, which has been so aptly termed a “mighty atom.” The scale is only about the size of a pin head, but breeds with such amazing rapidity that in a few months it will completely cover a full grown tree and by sucking the sap eventually kill it. A single scale is circular in outline with a mound in the centre, brown or gray in color and rather hard to distinguish. The insect itself is under this scale and winters over in nearly a mature state. Where many occur they give to the infested parts a whitish, scurfy, crusted appearance. When a tree is badly covered a bonfire is the most satisfactory remedy, but when only a few exist there is hope of saving by spraying with lime-sulphur wash or, in the case of a small orchard, with some one of several good preparations on the market.

Sunken areas of bark, little piles of sawdust and woodpecker holes on the trunks and large branches will indicate the presence of borers, the young of certain beetles. These spots should be cleared away and the borers killed by inserting a flexible wire into the burrows. Prevention consists in giving the trees a good coating of whitewash or soft soap for a distance of five or six feet from the ground. Borers indicate that the tree is unhealthy, for they do not occur in vigorous, rapidly growing, healthy wood.

The oyster-shell (*Mytilapis pomorum*) and the scurfy scale (*Chionaspis furfurus*) are cleaned off in the same way as the San Jose scale. Summer treatment is also possible against them, as all the young occur at about the same time, differing in this respect from the San Jose, which breeds all summer.

It is the intelligent man who will keep in touch with his orchard, help nature in the subjugation of undesirable forms, and exercise care and judgment in the management of the trees. Bearing trees are like old people, after they have become used to a certain way of living, any violent changes work sad havoc in the order of their existence. Keep the trees growing steadily and they will repay with good crops.

R. S. Adams.

AMERICAN ROSE SOCIETY

Annual Meeting and Exhibition at Washington, D. C.

Chicago Chosen as the Next Meeting Place

Officers Elected

PRESIDENT—Robert Simpson, Clifton N. J.; **VICE-PRESIDENT**—Philip Breitmeyer, Detroit, Mich.; **TREASURER**—Harry O. May, Summit, N. J.; **SECRETARY**—Benj. Hammond, Fishkill-on-Hudson, N. Y.
EXECUTIVE COMMITTEE—P. Welch, Boston, Mass.; E. G. Hill, Richmond, Ind.; August Poehlmann, Chicago, Ill.

The combined exhibitions of the American Rose Society and the Florists' Club of Washington, D. C., opened in Light Infantry Hall, Washington, on Wednesday, March 13.

ANNUAL MEETING.

The annual meeting of the American Rose Society convened at eight o'clock p. m., on Wednesday, in the Light Infantry Hall. President Robert Simpson assumed the chair and read his address.

PRESIDENT'S ADDRESS.

Ladies and Gentlemen:—Fellow members of the American Rose Society, we meet today in the capital city of our country as guests of the Washington Florists' Club. Many of us are growers, and I am sure that all of us are lovers of the rose. Some of you have come to Washington to place on exhibition your beautiful flowers, some of you have come chiefly it may be to admire the wonderful productions of others, but a goodly number of you I trust are here to discuss with us problems in rose growing and problems that confront our rose society. In any event I am sure that no one will say that mercenary motives have drawn you, some from the East, some from the West, some from the South, and others from the North, at considerable expense of time and money at this busy season of the year to attend this meeting; it is to gratify your love for the beautiful in nature, and to signify your willingness to do your part towards making this earth more beautiful and attractive that you are here today. I trust that our meeting may be helpful and encouraging to every grower of the rose, that we all as a result may have higher ideals, and go home more than ever in love with our business and calling and that this shall prove to be an epoch making meeting of the Rose Society.

At the 1906 meeting in Boston the matter of selecting the place in which to hold the exhibition and annual meeting of 1907, was left in the hands of the Executive Committee, after a discussion however which showed plainly that the sentiment of the meeting was in favor of going to some city in the west, should the way be open for us, and should such a course seem to be for the best interests of the Society. The executive committee left

the matter open until July thus giving every section of the country an equal chance to compete for the privilege of having the Rose Exhibition. The Society did not receive any invitation from the west; but it did have a very hearty and pressing invitation from the Washington Florists' Club, which sent their president to New York to back up their formal written invitation.

The president, Mr. Bisset, assured us that Washington and its people would see that the local detail work of the exhibition was taken care of properly and that an exhibition there would be a success financially. Whether they have kept their promise you will see for yourselves.

There is a great amount of detail work to be done in arranging for an exhibition of this kind, particularly when it is not held in connection with some regularly organized horticultural society where men have been trained for the work, and where all the facilities for the holding of exhibitions are at hand; more perhaps than many of you realize and I wish at this time to express my appreciation of the hearty enthusiasm with which the officers and local members of the executive committee have entered into this work, and have done willingly and gladly, what ever was in their power to do. Several meetings have been held in the city of New York, and some of the officers have not failed to attend a single meeting. If the exhibition of 1907 shall prove to be equal in point of interest and enthusiasm to that of 1906, much of the credit is due to the push and energy and painstaking work of our secretary and the enthusiasm of our young treasurer. The position of secretary of the American Rose Society is no sinecure I assure you if the incumbent tries to do faithfully the work that he finds to do, and just in proportion to the quality of the man in office will depend how much of the work shall be done, or how much shall be left undone. For good work the salary is totally inadequate, but in the present state of our treasury I dare not ask for an increase. The work of our present secretary during the past nine months will meet with your entire approval, I am sure.

As the program for this meeting indicates we have arranged for the reading of papers on interesting subjects

by men eminently qualified to talk on the subjects treated and I trust we may give to them our undivided attention during the delivery of the same, and in the discussion that shall follow, we may be able to give out and gather in a vast store of useful information.

The society is to be congratulated on the personnel of its essayists. It has been arranged that gentlemen of large experience and observation shall start a discussion on matters of vital interest to the society; that of increased membership, and new work that may be done by the society as an organization for its members and the public. I do not wish to anticipate or forestall what these gentlemen may advise, as I hope for a very full discussion when in the order of business these subjects are taken up; however in this connection I may be permitted perhaps to make a few observations, and possibly offer a few suggestions.

Much good work might be done by the society if we had at command funds with which to do the work; much work should be done that has as yet not been even attempted. For instance a committee of half a dozen men representing different sections of the country and competent to deal with the peculiar climate and other conditions of that particular section, might in conjunction with the secretary prepare a list of roses with general cultural directions suitable to the conditions prevailing in those various sections that would be worth much more to rose lovers than the annual membership fee. This committee could also advise as to the best roses to purchase, Dutch, French, English, home grown budded, or own root plants, department store stock, or stock direct from nursery. There is a vast amount of ignorance amongst the general public along these lines, and their ignorance is frequently taken advantage of by unscrupulous dealers.

What the society can offer its prospective members as an inducement to membership will no doubt be a controlling factor in seeking to enlarge that membership, on the other hand larger resources as a result of larger membership will permit the society to undertake greater things.

If the American Rose Society should identify itself with the various horticultural societies of the country to the

extent of offering its silver medal once a year for collections of cut roses, roses in pots, etc., to be judged according to the scale of the Rose Society, it would add much interest to the exhibitions and our society would gather strength and prestige thereby.

If the financial resources of the society were adequate I would favor the holding of an exhibition in June, as well as March, so that the rose loving public could see and become acquainted with the beautiful out door roses that we cannot place before them in March, such as Frau Karl Druschki, Baroness Rothschild, Mrs. John Laing, etc. The June exhibition would be more popular, more interesting and do more to educate the masses in rose culture than it is possible to do with an exhibition of indoor roses in March.

If the catalogue men of the country, we have some of the gentlemen here today, could be induced to give a page of their catalogue each year to a statement of the aims and purposes of the Rose Society and advocate membership in it to their customers, great possibilities would immediately loom up before the society.

It is reasonable to suppose that our membership could be multiplied several times within a year if all present would resolve to make a point to interest their friends and business acquaintances by correspondence, by personal appeal or in any other legitimate way that presented itself.

The Society offers gold and silver medals at its exhibitions for new varieties, the object in offering these being to encourage the production of novelties of sterling merit, but in ruling that a novelty must score at least 95 points to win the gold medal we practically make it impossible to win it at all.

Very few judges would be willing to say that a flower was perfect in form, in color, in fragrance or distinctiveness or in fact in any one particular, yet a variety with as many good points as Liberty or Killarney or Richmond, should have a chance to win the gold medal of the society. We should of course maintain a high standard in the giving of such awards, but we should at the same time avoid exacting impossible conditions. I ask you to consider whether or not the rule governing the judging of novelties needs to be revised.

At the 1906 meeting you will remember that much time was taken up discussing the desirability and practicability of establishing a permanent fund of considerable size for the uses of the society; all agreed that it was desirable, but the meeting could not agree on any particular plan of action. We have today in America many men so enriched with this world's goods that their chief concern in life is to find the best way to spend this vast accumulation of wealth, that it may accomplish the greatest amount of good for the largest number of people.

Art, education, science, religion, humanitarianism, have each received their millions to aid in prosecuting the work of blessing mankind along their particular lines. It is a good thing to pay out \$100,000 for a fine painting and present it to a museum of art where it can be seen and admired, and furnish inspiration to thousands of people. It is noble to endow our institutions of learning so that our youth may have the privileges of higher education. It

is still better to provide the means for caring for the sick, the suffering, the aged and the homeless, but it is a question if in establishing a fund of ample proportions out of which this society might disseminate information and furnish the inspiration which would result in the beautifying of hundreds of thousands of homes all over our land, and bringing joy and brightness into the hearts and lives of still larger numbers of our people, the man of means would not be choosing the very best way, from an artistic, educational, humanitarian, or sociological point of view, of investing the wealth which a kind Providence has placed in his hands and made him the steward and custodian. I am sufficiently optimistic to think that if a committee composed of the right men should take hold of this matter and present it properly to men of large means and philanthropic tendencies, a fund could be established, permanent in character, the income of which only could be used by the society.

Gentlemen, it rests with you to take such action on this and other matters as your combined wisdom may consider best.

I trust your stay in the city of Washington may be both pleasant and profitable.

Secretary Hammond's report followed.

SECRETARY'S REPORT.

Reviewing the work of the American Rose Society since the last annual meeting, held at Boston, March 27, 28 and 29, 1906, the secretary feels as if there was much interest scattered far and wide in this society. Our present membership extends from Bellingham in Northwestern Washington to Schlesian, Germany. We have lost in all five life members by death, E. G. Asmuc, E. M. Wood, H. Dale, George Fancourt and J. L. Dillon, these last two within the past year, and each of these men were active rose-growers; two new life members were added to our list, S. S. Pennock and Robert Simpson, which leaves 43 active. The annual membership who have paid up their dues for this year number 91, divided as 85 actual and 6 associate members. This division of associate members seems as if it may bring into touch with this society an extended number of people interested in local societies.

We have Dr. Spencer S. Sullinger, President of the Rosarians of Bellingham, Wash., and Rev. J. R. Lawrence of Massachusetts. Both of these men are clergymen alike interested in creating in their locality a taste for civic improvement. From Germany comes Dr. G. Molwes with the hand of fellowship to those who in America have to do with roses. With this line of members what can the society do to interest and attach more of the same sort? One thing is a full and comprehensive report of the proceedings.

As a new man at this work I have found there is a lot of detail to keep in touch with our membership and to get a revenue sufficient to cover cost of the necessary postage, printing, and clerical work to systematically carry it on. It calls for an actual annual expenditure of more than the society can well afford, unless there is some financial support more than the present limited number of annual dues.

This American Rose Society can

bring itself before the general public in no more effective manner than by a liberal offering of its medals gold, silver or bronze, as prizes to be awarded for some tangible work, by the various local societies. To illustrate, in 1901 and 1903, this society gave as a prize to the Annandale Annual Rose Show a silver medal. I am assured that this medal was very much appreciated, and an application was made by Miss Caroline Cruger, the secretary at Barrytown, N. Y., for this consideration again. The Executive Committee then directed that a medal should be offered. Now if this is a matter of interest to one local society, it would be so to many, if we can extend our usefulness in this line. The gentlemen who were active in the formation of this society certainly did a lot of good work to give the society a start. Our die for these medals is in storage at the Philadelphia Mint, and the design is a very pretty thing.

The past year, by the advice and consent of the executive committee, I had made a design for this society and placed thereon these words "A Rose for every home, A Bush for every garden" and this device marks all our stationery distinctively.

This year we printed one thousand schedules in pamphlet form and mailed one to each member and the balance were sent out as advertisements, so to speak, of the Rose Society; a few hundred were mailed to growers all about the country; the Annual Report was likewise treated.

Last September I was in Chicago for several days and attended a meeting of the Cook County Horticultural Society, and was introduced with genuine cordiality as Secretary of the American Rose Society, upon which occasion the opportunity presented itself, and I put before that gathering the aims and doings of the American Rose Society. We have as one of our judges in attendance at this exhibition Mr. Hauswirth, who has come to our society without cost or hope of reward in common with our friends, William Kasting, of Buffalo, and Robert Craig, the first President of the Rose Society.

The Chicago Florist Club sends to the American Rose Society an invitation to fix the place of its next meeting in that city. Your executive committee has held six formal meetings during the past 12 months, members coming on to New York from Washington, Boston, Hillside, Pa., So. Orange, Clifton, Summit, N. J., Tarrytown and Fishkill-on-Hudson, N. Y., to attend. This interest shown by the committee was echoed back by the rose growers who are here today in force, but to our knowledge if the sunlight had been up to normal the past two months this exhibition large as it is, fine as it is, would have been more than double.

There are two questions on our programme, suggested by President Simpson, that are of imperative interest and which will be before the meeting tomorrow, and these questions, friends, are topics which your secretary, for the future prosperity of the American Rose Society, commends to your individual attention.

Treasurer May then presented his report showing a cash balance of \$324.94. The reports were received with warm applause. Theodore Wirth, Supt. of Parks, Minneapolis, Minn., was

VICTORY HAS MADE GOOD

Place your orders early for rooted cuttings. Prices \$6 per 100, \$50.00 per 1000. DISCOUNT FOR CASH WITH ORDER

GUTTMAN & WEBER

The Wholesale Florist and Grower
of New York
Lynbrook, L. I., N. Y.
43 W. 28 St.,

then introduced and read a paper on "Outdoor Rose Culture."

A cordial vote of thanks was tendered Mr. Wirth for his eminently practical, truthful address, which was full of wise suggestions.

The selection of the meeting place for 1908 was then considered and Chicago was chosen.

Election of officers resulted as follows: Robert Simpson re-elected for president; Philip Breitmeyer, vice-president; Benj. Hammond, secretary; H. O. May, treasurer; P. Welch, E. G. Hill and August Poehlmann, executive board.

The exhibition was excellent. The roses were superb in quality, Richmond especially so.

Secretary Wilson of the Department of Agriculture opened the exhibition at six o'clock with a most eloquent address expressing his deep appreciation of the work of the florists and rose growers and extending the good wishes of his department.

Many exhibits came in late and judging was delayed.

The judges were Chas. McCauley, Geo. C. Shaffer, G. C. Watson.

The awards of the Florists Club of Washington were as follows:

Hyacinths, three pans, 10 bulbs of one variety in each, F. H. Kramer; single pan, 10 bulbs of one variety, 1st and 2d, F. H. Kramer. Lily of the valley, six pots, S. C. Briggs. Fern grown in a dwelling at least four months previous to exhibition, Nellie Baxter, 1st and 2d. Hybrid geranium, S. C. Briggs.

100 blooms carnations one variety, with foliage, H. Weber & Sons Co., 25 blooms dark pink, 1st, P. B. H. Widener; 2d, H. Weber & Sons Co.; 3d, S. C. Briggs. Crimson, 1st, P. B. H. Widener; 2d, Washington Florist Co. Light pink, 1st, H. Weber & Sons Co.; 2d, S. C. Briggs. Scarlet, 1st, P. B. H. Widener; 2d, Guttman & Weber. White, 1st, H. Weber & Sons Co.; 2d, P. B. H. Widener. White variegated, 1st, P. B. H. Widener; 2d, H. Weber & Sons Co. Six or more blooms seedling shown for first time, 1st, H. Weber & Sons Co.; 2d, W. A. Manda. Pansies, 48 blooms, S. C. Briggs. Violets, double, other than Lady Hume Campbell, Theo. Dietrich; Princess of Wales, 1st, D. Bisset; 2d, F. G. Mense. Any other single variety, Theo. Dietrich. Orchids, Lager & Hurrell.

Awards by American Rose Society:

Division A. Twenty-five blooms, Bride, Stephen Mortenson, 1st; Bridesmaid, L. B. Coddington, 1st; G. E. Campbell 2nd; Mrs. Pierpont Morgan and Mrs. Oliver Ames, J. N. May, 1st; Golden Gate and Ivory, F. H. Kramer, 1st; Mrs. Abel Chateau and Uncle John, Robt. Simpson, 1st; Liberty, Edw. Towill, 1st, also 1st with Joseph Hill on any other disseminated variety; Killarney, W. H. Elliott, 1st; Richmond, S. Mortenson, 1st; G. E. Campbell, 2nd.

Division B. Twelve blooms, Liberty, E. Towill, 1st; any other named disseminated variety, Washington Florists Co. with Cardinal, 1st; Bride, Bridesmaid, Golden Gate, Ivory, Richmond, F. H. Kramer, 2d.

In Division C. open to private gardeners and amateurs, S. C. Briggs was the only winner in five classes.

The Lord & Burnham Co. trophy was won for the second time by George Burton; the Dorrance trophy went to Robt. Simpson, as did also the Traendly & Schenck cup for 50 blooms Mrs. Abel Chateau, the Dingee-Conard Co. and E. G. Hill Co. prizes for 50 blooms Killarney and Richmond respectively, the F. R.

Newbold cup for Killarney and the L. M. Noe special for Uncle John.

The G. H. Cooke cup for 100 blooms, Richmond and J. H. Taylor cup for 50 blooms Wellesley went to W. H. Elliott.

The H. F. Michell Co. cup for 50 Richmond, to Jos. Towill.

The Elliott prize to A. Farenwald, Pennock-Meehan Co. cup for 50 Bridesmaids, to L. B. Coddington; Hammond prize for 25 Ivory, to F. H. Kramer, who also took the Burpee cup for 50 blooms Golden Gate.

The May cup for American seedling not yet introduced, went to E. G. Hill Co., for Rhea Reid; the Coddington prize for 25 Brides to S. Mortenson; the Briggs prize for 6 blooms of new rose never exhibited, to W. S. Clark.

Meyers & Samtman, Philadelphia, and John Cook, Baltimore, showed promising pink seedling roses. F. H. Kramer, Washington, had handsome groups of Baby Rambler and Queen Beatrice. F. R. Pierson Co. made a magnificent showing of carnation Winsor.

All the carnations kept poorly, possibly on account of the sudden warm wave.

The Simpson Cup for Rambler roses in pots was won by M. H. Walsh, who also took the cup for General Display of Roses in pots and prize for Specimen Climber in pot.

Welch Bros. prize for Vase of Roses most artistically arranged went to Robt. Simpson.

The session on Wednesday afternoon was one of the best ever in the history of the society. The paper read by E. G. Hill on "The Hybridization of Roses, the Ideals and the Means used to work up to them," was followed by a long and interesting discussion.

M. H. Walsh's paper on "Climbing and Trailing Roses in the Hardy Rose Garden" drew out an equally instructive debate. A full report will appear in next week's issue.

A vote was passed recommending to the executive committee that certificates may be awarded to new varieties scoring as high as 80 points.

On Thursday afternoon President Roosevelt received the Rose Society visitors at the White House and the members generally took advantage of the opportunity to grasp the hand of the president.

The visitors were entertained at a banquet in the Arlington Hotel on Thursday evening.

BANQUET TO S. A. F. EXECUTIVE BOARD AT PHILADELPHIA.

The officers and directors of the Society of American Florists met in Philadelphia on March 11th and 12th and mapped out a program for the August convention. Much important work was accomplished and a new stride forward for the old society is a sure result. Horticultural Hall was selected for the exhibition and the Broad Street Theatre for the meeting. The convention will last five days instead of four as usual. David Rust was selected as superintendent of exhibition. A full report of the proceedings will be given out in due course by the secretary, Mr. Hauswirth. Mr. Stewart showed him-

self an ideal presiding officer and put business through in good shape.

Incidental to the Executive meeting was a banquet tendered to them by the Florist's Club of Philadelphia at Horticultural Hall on Tuesday evening. Samuel S. Pennock, president of the club, presided, and was ably assisted by Robert Craig as toast master. William J. Stewart responded for the national society in his usual happy style, and made the members present put their thinking caps on. John Westcott, the vice-president, had a welcome word and the glad hand. Without Mr. Westcott, Philadelphia would not be Philadelphia. Among the other speakers were Secretary Phil. J. Hauswirth, Frank H. Traendly, Peter Crowe, W. F. Kasting, J. C. Vaughan, E. V. Hallock, W. K. Harris, Theodore Wirth, Colonel Castle and others. The hits of the evening were the speeches of Stewart, Castle and Farquhar. The latter was particularly forceful and electrified the members with the width, breadth and depth of his views in prophesying the future of our national society. Edward J. Dooner, P. J. Lynch, A. M. Campbell and Thos. Hogan contributed to the tuneful and sentimental end of the program with much acceptance.

G. C. W.

PITTSBURGH AND ALLEGHENY FLORISTS' AND GARDENERS' CLUB.

The club meeting on March 5 was not as well attended as usual on account of the furious blizzard which kept many away to look after their glass. However the members present decided it was more interesting and home-like than some of our larger meetings. Mr. Falconer reported that there was too great a rush of business and prosperity in the east and Easter was too close at hand for him to secure one of the large eastern growers to address the club, as was intended. He did his best, however, and with his running fire of comment and notes on the various exhibits as they came up, the eastern expert was not much missed.

A. R. Peacock, Thos. Jenkinson gardener, showed a choice begonia Lorraine which at blooming time had been cut back and was now again a mass of bloom; also fine primulas from the Sutton strain of seed; Western Penitentiary, W. James gardener, showed cinerarias; Pittsburgh Florists' Exchange, J. Bader, Blind Bros., S. J. Wolfe and G. M. Laughlin, H. S. Price gardener, had fine collections; Phipps Conservatories, two specimen Harrisii lilies, one between five and six feet high, tulips, Dutch Roman hyacinths. Maxfield & Dimond, Warren, R. I., had a box of their artificial calyxes on exhibition. They seem to be a sure preventive of split carnations.

The April meeting has for its subject "Roses and Bulbous Plants and Flowers."

H. P. JOSLIN, Secretary.

NEW HAVEN HORTICULTURAL SOCIETY.

A meeting of the society was held in their hall on March 5. The feature of the evening was a paper on the *Harrisii* lily, and the subject was thoroughly discussed afterward. Owing to so much disease among the lilies many of the growers have stopped raising them. They also entered a protest against the cutting down of the bulbs from 6 to 7 to 5 to 6 and being obliged to pay the same price. One member stated that he would not get 50 per cent. of what he planted to bloom. The officers elected for the following year are: Wm. Ferrier, president; Hubert Grove, vice-president; David Kydd, treasurer; Walter Keolla, secretary. The treasurer's report showed that the society was in a flourishing condition. Their next exhibition is to be held in Music Hall on the 6th, 7th and 8th of November.

NEW BEDFORD HORTICULTURAL SOCIETY.

At the monthly meeting of this society, March 11, the members enjoyed an interesting discussion on the subject of the house culture of bulbs, which was led by Wm. F. Turner with an account of his experience as an amateur. He also had upon exhibition a fine pan of Roman hyacinths.

Thomas Gray of Boston also took part in the discussion.

The entertainment committee submitted an excellent program for the ensuing year embracing discussions upon bulbs and hardy and herbaceous plants. Outside speakers and specialists upon the various subjects will be engaged when possible.

In the monthly exhibition of plants and flowers the cyclamens were in evidence. Wm. Keith showed two vases of cut flowers; James Garthley showed two fine specimen plants.

GARDENERS' AND FLORISTS' CLUB OF BOSTON.

At the next regular club meeting on March 19, F. E. Palmer will open a discussion on carnations in which a number of specialists will take part. Exhibits will be made of most of the current season's novelties. Arrangements for the coming banquet will be made.

A field day will be held with W. W. Edgar Co., Waverley, on Saturday, March 23. Members and friends are invited to take electric cars leaving Park Street Subway Station at 1.30 p. m. for Waverley.

W. N. CRAIG, Sec'y.

PASADENA GARDENERS' ASSOCIATION.

The regular meeting of the association was held on March 1 in the G. A. R. hall. "Horticulture" was the subject, which was ably treated by several speakers, among them Secretary Coolidge of the Board of Trade, who commended the society for the step they had taken towards promoting horticulture and floriculture in this section.

The spring flower show will be held in April, and members are making great preparations for it.

SALVIA ZURICH

THE EVERBLOOMING SALVIA

One of the most important novelties in bedding plants introduced for a long time, produces its wealth of flowers while very small and is in its full glory long before any other kind shows even a bud, grows also much dwarfer and more compact.

Our stock is raised from cuttings and seed, which was procured in Zurich (Switzerland).

Strong Plants from 21-2 in. Pots 75c per doz., \$5.00 per 100, \$45.00 per 1000

For full description send for circular or see Horticulture pages 140 and 202, American Florist's Carnation Number page 19, and Florist's Exchange page 185.

WHOLESOME CHESTNUTS.

Only two weeks until Easter but there is a good deal of hard work to be done in two weeks, all the harder perhaps because of a certain amount of uncertainty up to the last day.

In many places lilies will not be in for Easter in anything like the numbers needed. Forcing must be resorted to with some intensity to bring plants with promising probabilities into bloom. A night temperature of 70 degrees will not be any too high from now on. More than ordinary care in watering will, when high temperatures are maintained, be absolutely necessary; neglect in watering will without fail work irreparable injury.

Tulips and hyacinths in good shape in pans will find ready purchasers. Azaleas are always Easter favorites. Plants showing any sign of being too far advanced should be placed in as cool a house as circumstances and other conditions permit. Azaleas in bloom are very easily put out of commission if they in the slightest degree suffer for want of water.

Spireas should cause no trouble to get and keep them in the desired condition for Easter, but it must be remembered that customers always prefer things at their best, oblivious of the fact that such a condition in many things marks the turning point leading to a rapid process of deterioration.

Do not put off too long the search for material needed for the Easter trade. Last year, although in point of uncertainty in no way like this year, there were many serious disappointments caused by over confidence and too long delay in placing orders.

STATEMENT OF PLANT IMPORTS.

There were entered at the port of New York from February 19 to March 11, 1907, the following plants, etc.:

From Holland—H. F. Darrow, 32 cs. plants, 12 bales garden seed; W. Elliott & Sons, 19 cs. plants; McHutchison & Co., 53 cs. plants; P. Ouwerkerk, 91 cs. trees; C. B. Richard & Co., 1 cs. plants, 5 cs. trees; Stumpp & Walter, 2 cs. bulbous roots; J. M. Thorburn & Co., 6 bales garden seed; Vaughan's Seed Store, 7 cs. bulbs, 43 cases roots; sundry forwarders, 148 cs. plants, 56 cs. trees, 2 cs. bulbs, 31 cs. bulbous roots, 10 bales garden seed.

From Belgium—McHutchison & Co., 2 cs. plants; Vaughan's Seed Store, 2 cs. bulbs; sundry forwarders, 20 cs. plants, 142 tubs laurel trees.

Via Liverpool—H. F. Darrow, 1 cs. trees; McHutchison & Co., 10 cs. plants.

Via Southampton—McHutchison & Co., 16 cs. plants.

From Glasgow—Aug. Rolker & Sons, 1 crate trees.

From France—C. C. Abel & Co., 36 cs. plants; C. B. Richard & Co., 13 cs. do.; Aug. Rolker & Sons, 21 cs. do.; general order, 332 cs. do.; sundry forwarders, 108 cs. do., 28 cs. trees.

From Germany—T. E. Anderson & Co., 6 cs. roots; Julius Roehrs & Co., 8 cs. plants; Stumpp & Walter, 8 cs. seed; J. M. Thorburn & Co., 7 pkgs. seed, 14 cs. lily of the valley pips; Vaughan's Seed Store, 1 cs. seed.

You'll find something worth reading on every page of this paper.

Spiraea Gladstone, large bushy plants, 6 and 7 inch pots, 50c., 75c., 1.00 each.

Spiraea superba, 6 inch, 25c. to 35c. each.

Cineraria hybrida, 6 inch pots, all shades, 3.00, 4.00, 5.00 per dozen.

Hydrangea Otaksa, 6 and 7 inch pots, 50c., 75c., 1.00 each.

Crimson Rambler, Roses, 6 inch pots, 3 ft. high and over, 1.00, 1.25, 1.50, 2.00 each.

Hyacinths, all shades, 4 inch pots, 12c.

Tournefort Tulips, 3 plants in a 4 inch pot, 12.00 per 100 pots; 1.80 per dozen.

Double Von Sion Daffodils, 3 plants in a 5½-6 inch pot, 2.50 per dozen pots.

EASTER PLANTS

An immense stock now ready at the well-known establishment of

GODFREY ASCHMANN, Philadelphia.

Azalea indica our specialty, three houses full, selected personally by myself on my annual business trip in Belgium last fall.

Mme. Van der Cruyssen, the best double pink azalea in existence. Have 3000 of them, all as round as an apple, just covered with buds. Other varieties as, Niobe, Bernard Andrea alba and Deutsche perle (double white), Empress of India, Prof. Wolters, Verveaneana (double variegated), Simon Mardner, and about eight more best varieties, price 75c., 1.00, 1.25, 1.50, 1.75, 2.00 each. Have a limited amount of 50c. and 60c. size, such as Apollo (dark red), Simon Mardner, etc., (no Van der Cruyssen).

Lilium multiflorum, 6 inch pots, were never so nice as this year. Price, 12c. per bud for plants with 4 buds or less; plants with 5 buds and above, 10c. per bud.

Araucaria excelsa, 6 inch pots, 6, 7 and 8 tiers, 1.00, 1.25, 1.50 each.

A. excelsa glauca, 6 inch pots, 5 and 6 tiers, 1.00, 1.25, 1.50 each.

A. compacta robusta, 7 inch pots, 30-35 inches high, very fine, 2.00 to 3.00 each.

Specimen glauca, 7 inch pots, 3.00 each.

Please mention if pots are wanted. Cash with order please. All goods must travel at purchaser's risk.

DIRECT FROM MR. TROY

The silver cup of the Nassau County Horticultural Society was won by Mr. Forbes.

JERICHO, N. Y.
MR. J. H. TROY,
Mount Hissarik Nurseries,
New Rochelle, N. Y.

Dear Sir: The consignment of roses received from you last Spring was the most satisfactory I have ever handled. Out of 2,600 plants only ten were lost. That I succeeded in winning the Silver Cup of the Nassau County Horticultural Society for the best collection of hardy out-door roses, November 1st, 1906, speaks volumes for the excellent quality of plants you furnish.

Yours truly,
L. G. FORBES
Gardener to R. J. Preston, Esq.

Seed Trade

There has been the usual and expected reaction in prices of some varieties of "Canners Peas," notably Alaskas. Two months ago this variety sold readily at \$4.00, but now an offer of \$3.00 will not be refused by anyone having them to sell. Admirals have also declined in price, but a good sample will bring \$3.40, while Advancers, Horsefords and Surprise are firm at \$4.00 for the two former sorts, and \$4.50 for the latter.

New York State farmers are offering Stowell's Evergreen Corn at low prices—under \$1.00. Three years ago they were scoring \$5.00, and would not contract to grow under \$3.00. How very foolish a little prosperity will make some people. This brings to mind the many complaints which seed growers and canners are making of the troubles they are having in getting farmers to contract to grow their crops. Each year marks an advance in the prices paid the farmer, but the seed grower finds it difficult to convince the seed merchant of this fact, and still more difficult to get the advance which he has to pay the farmer. The California seed growers, realizing that they command the situation, have advanced their prices to a point where they can make a reasonable profit. When the grower gets a reasonable profit it means the farmer is getting a living price for his crops; this in turn enables him to buy such seeds as he wants of the retail seedsman at a fair price and thus the grower, the jobber, and the retailer are all benefited. Prosperity for the farmer means prosperity for all, therefore he should always receive a price for his crops that will mean a fair return for his labor, and this also enables him to spend the necessary time and expense in caring for his crops, which means finally better samples and quality.

Josiah Young, Troy, N. Y., has moved into his new store, 375 River street, which is one of the finest seed and flower establishments in the state.

SEND FOR OUR FLORISTS' WHolesale PRICE LIST.

HENRY F. MICHELL CO., 1018 Market St., Philadelphia.

PUBLICATIONS RECEIVED.

The Dahlia Manual. A Treatise on Dahlia Culture, Illustrated. By W. W. Wilmore, Denver, Colo. This useful pamphlet presents the experience of an intelligent and observant grower for a period of twenty-five years. It tells all that is necessary to know to raise dahlias successfully. Price 35 cents.

W. W. Rawson & Co., Boston, are sending out as free literature Rawson's Practical Guide to Vegetable Growing and Rawson's Guide for Flowers. Accompanying each, respectively are complete planting tables for vegetables and flowers which will be found very useful for reference, especially by the amateur garden maker.

We have received from Sander & Sons, St. Albans, England, the "Addenda to Sander's List of Hybrid Orchids, 1905 to 1907." The new tables record the crosses raised and registered since the publication of the Orchid Hybrid List. These tables will prove of great value to hybridizers, helping them to avoid duplication. They represent a vast amount of careful work, yet the price is only 1 shilling, post free.

The school board of Marlboro, Mass., have established an industrial association which includes gardening.

A PROPOSITION WORTH CONSIDERING.

HORTICULTURE IS STRONGEST in the most progressive and most intellectual horticultural communities. Advertise in HORTICULTURE. There's an inducement.

MOVEMENTS OF GARDENERS.

H. E. George, who has for the past year been with Theo. Payne, has taken a position with Chas. Winsel, 251 South Main St., Los Angeles, Cal.

Donald McNaughton for the past two years with W. N. Craig, North Easton, Mass., has been appointed head gardener to Franklin H. Beebe, Falmouth, Mass. Mr. McNaughton was previously at Skibo Castle, Andrew Carnegie's residence in Scotland.

BUSINESS CHANGES.

Mrs. L. A. Cox, successor to Geo. M. Leadley, Detroit, Mich., has removed to 233 Woodward Ave. The new store is handsomely fitted up.

ST. LOUIS HORTICULTURAL SOCIETY.

The first spring flower show ever held in St. Louis was given by this society, and opened on Tuesday afternoon in the banquet hall of Masonic Temple. The hall was beautifully decorated with plants, cut flowers and handsomely arranged booths. Especially noticeable were the booths of Fred C. Weber, C. Young & Sons Co., St. Louis Seed Co., and the Koenig Floral Co. The dinner table arranged by Theo. Miller attracted much attention from the society ladies, and was the only display of this kind.

Among the visitors were Leonard Kill, W. C. Washburn, M. Barker of Chicago; A. F. Longren and J. D. Thompson, Joliet, Ill.; G. A. Kuhl, Pekin, Ill.; A. R. Knowles, Bloomington, Ill.; Mrs. Canfield, A. C. Brown, Springfield; J. S. Wilson, Western Springs. A spread in a near-by cafe was tendered them on Wednesday afternoon and was an enjoyable feature. On Tuesday and Thursday evenings D. M. Hazlett gave stereopticon views of the society's aims. On Wednesday evening the annual meeting was held and officers were elected as follows: President, Edward Mallinckrodt; vice-president, L. Mathews; secretary, F. C. Weber; treasurer, O. G. Koenig. Messrs. R. Tesson, Alex. Waldbart and A. Meyer were the judges and the list of awards was as follows:

Collection of plants in bloom, Wm. Schray & Sons, 1st; G. B. & R. J. Windler, 2d; Koenig Floral Co., 3d. Collections of bulbous plants in bloom, F. C. Weber, 1st; W. Schray & Sons, 2d; G. B. & R. J. Windler, 3d. Fifty foliage and blooming plants, C. Young & Sons Co., 1st; W. Schray & Sons, 2d; C. C. Sanders, 3d. Specimen plant, W. Schray & Sons, 1st; Koenig Floral Co., 2d; C. C. Sanders, 3d. Specimen blooming plant, A. Jablonsky, 1st; F. C. Weber, 2d. Six blooming lilies, C. Young & Sons Co., 1st; A. Jablonsky, 2d; F. H. Mein-

hardt, 3d; all Longiflorums, Lily of valley, H. N. Bruns, Chicago, 1st; W. Schray & Sons, 2d. Display of pansies, R. J. Windler, 1st; C. C. Sanders, 2d. Violets, W. Schray & Sons, 1st; F. C. Weber, 2d; Wm. Winter, 3d.

In carnations the Chicago Carnation Co. took first in five varieties, with White Perfection, Red Riding Hood, Aristocrat, J. A. Valentine and Enchantress; first in white with White Perfection, with J. Steidle, 2d; 1st in light pink with Enchantress, J. D. Thompson Carnation Co., 2d; 1st in dark pink, with Aristocrat, J. D. Thompson Carnation Co. 2d. In red J. D. Thompson Carnation Co. was 1st with Robert Craig, A. Jablonsky, 2d. in variegated, J. D. Thompson Carnation Co. 1st with Mrs. Patten; A. Jablonsky, 2d. Any other color, A. Jablonsky, 1st with Harlowarden, J. Steidle, 2d.

In roses, Peter Reinberg, Chicago, took first in all but the American Beauty class, when W. J. & M. S. Vesey captured the first, with F. C. Weber second. In the other classes W. J. & M. S. Vesey were a close second.

For floral baskets, Theo. Miller took first; for vase of flowers arranged for effect, F. C. Weber first with Richmond roses.

The E. G. Hill Co., Richmond, Ind., displayed their red rose, Rhea Reed.

The society are already making arrangements for a fall exhibition.

DETROIT FLORISTS' CLUB.

At the meeting on March 6 a very interesting paper on carnations was read by Wm. Stahlein. Mr. Stahlein is well able to handle the subject for his elegant blooms speak well for his methods. He has two very promising seedlings.

Mr. Pautke of Grosse Pointe showed blooms of a new carnation of Enchantress color, 4 to 5 inches in diameter, with very long, stiff stem. It shows distinct qualities among the many carnation children.

OBITUARY.

William Griffin.

William Griffin, for years a member of the firm of Griffin Brothers, florists, of Frankford, Pa., died March 7 at his home, No. 4915 Willow street, after a long illness. He was 58 years old and had lived in Frankford all his life. He retired from active business some time ago and spent several months in Europe in search of health. He was a member of the School Board of the Twenty-third section and a vestryman of St. Mark's P. E. church. He was buried with Masonic honors from St. Mark's church. A widow survives him.

Other Deaths.

I. M. Brainard, aged 79, died at Gouverneur, N. Y., February 26.

Mrs. E. E. Street, the pioneer florist of Booneville, Miss., died on February 26.

S. C. Hulbert, superintendent of Fairmount cemetery, Newark, N. J., died February 28, aged 66.

James B. Ennis, a native of Ireland, died on February 24, at Bloomington, Ill., in his seventy-sixth year.

Frank Yahnke, a familiar figure at farmers' institutes, died at Winona, Minn., February 27, aged 70 years.

Philip Winter, who since 1853 has been located in Glenville, O., died on February 22, in his eighty-third year.

James Magill, W. Collingswood, N. J., passed away on February 27. He was for many years a popular florist in Tioga. His age was 65.

John C. Garden died at his home on Minnesota avenue, Anacostia, D. C., on March 11th, aged 57 years. Deceased came of a family of Scotch gardeners and was educated as such in his native country. After landing in this country he took up the additional industry of raising bedding plants. He was the eldest son of the late Alex. Garden and a half-brother of Alex. B. Garden of Washington, D. C.

Cut Flower Market Reports

BOSTON The market remains as yet very quiet with an abundance of stock with the exception of American Beauties. Roses in the smaller grades are selling plentifully while carnations still remain a drug in the market. Easter lilies are beginning to come in and the stock is in fine condition. Sweet peas and bulbous stock can be found in large quantities with but little demand.

Warmer weather and more stock was on the program the past week. It has been a matter of the wholesaler carrying all the stock and the retailer buying only what is needed. A very quiet week was again witnessed with no flurries in the market, the coolers being packed to over-flowing. An abundance of stock is carried along for days until something gives away and the bargain signs are seen. Roses have been very abundant and the quality has not been equalled for some time. Bridesmaids have been rich in color, excellent stem and foliage; Brides, Killarneys, Brunners, Chatenay and others in fine form. The outlook for Easter is very encouraging for a good crop. Harrisii and callas are coming in more plentifully daily, with demand very light. Carnations are a glut at times and hard to move at very low prices, the quality being excellent. White Lawson has never been better and is a ready seller while Enchantress is good in flower but too weak. Bulbous stock is still too abundant. Sweet peas, mignonette and violets are in good supply, demand light. A few spring openings consumed a portion of greens which have been somewhat scarce in this vicinity, especially smilax.

CINCINNATI Everything in the cut flower line is plentiful, in fact on some days the supply borders on a glut, but thus far we have escaped any serious over supply. Carnations especially are in full crop. Indications are that the present crop will not hold out till Easter and that this popular flower will be scarce then. Roses are in good shape and if the weather is favorable there will be enough to meet the demand. Bulbous stock continues to move fairly well considering the amount of other flowers on the market. Everything in the line of green goods is scarce except green dye for carnations. It is surprising how many originators there are for this wonderful coloring matter. They should direct their inventive genius toward fern leaves; just now, there would be more money in it.

COLUMBUS Trade keeps along in good volume, although prices have of course softened very much. Carnation prices went to pieces all at once. Of course we expect the "before Easter glut," but

are getting through it in good shape. It will not be long before growers will begin to hold stock back for the great festival of our year. Every dealer is making extensive preparations for it, and already many orders have been booked. There is no question about there being a splendid Easter business just ahead, and at this writing it looks like "high rates."

DETROIT Trade has picked up considerably and growers by keeping their carnations cool have caused the local glut to disappear. Roses are still on the scarce list. Violets and bulbous stock are plentiful. Easter outlook in the plant line is bright but cut flowers will be very short with the possible exception of tulips, hyacinths and daffodils. Lilies promise to be scarce.

INDIANAPOLIS Lent is here in full force. There is nothing of importance doing in a social way, and as a result business is quiet. Fancy Beauties are still few and far between, while teas are in fine quality and good supply. A large amount of bulbous stock is on the market, and can be had at reasonable prices. Lily of the valley is plentiful, but moves slowly. Quantities of extra fine sweet peas are to be had, also white lilac, both of which sell well. Easter lilies are not very plentiful, and the growers report no surplus in stock. There is a notable scarcity of greens of all kinds. The demand for potted plants holds up well and the assortment is good.

PHILADELPHIA Market featureless here the past week and almost as reported last week. Roses of all kinds are plentiful and good with the exception of American Beauty. That item is still scarce and of poor quality. Carnations are abundant and excellent and go at moderate figures. Lily of the valley is in fair shape as to quality but goes a bit slow. Violets are moving nicely although very plentiful. Orchids scarce. There is a little more life to the sweet pea market and supplies have shortened a little. Bulbous flowers of all kinds very plentiful and ahead of demand.

NEW YORK The market is very much depressed, receipts of roses are heavier, with lower quotations. The carnation shippers are controlling their

Have YOU TRIED the New "MARKET"

Things are humming once more in the vicinity of 13th and Filbert Sts. Messrs. Berger Bros. are now comfortably established in their new quarters, number

and doing the biggest business in their history. Visitors welcome. Their motto:

"Good service and a square deal all round."

BERGER BROS., Wholesale Florists
1305 Filbert Street, **PHILADELPHIA**

cut in anticipation, likely, of advancing prices as Easter approaches. The supply of all varieties of flowers is more than ample to meet present demands.

WASHINGTON But little can be said in praise of the market. The stagnation of a week ago remains unbroken. There is an overabundance on everything especially azaleas, Holland bulbs and violets, though the latter constitute the principal drug in the market. Arbutus is seen occasionally, but of poor quality and very limited quantity.

PERSONAL.

C. W. Ward of Queens, N. Y., sailed for Bermuda on March 9.

Henry Collins of Boston takes a position on the B. P. Cheney estate, April 1.

Visitors in Boston: Mr. Stearns, representing J. W. Sefton Mfg. Co., Chicago, Ill.

Peter Veraecker of Media, Pa., was thrown from a trolley car on March 2, and badly injured about the head.

Thomas Vincent, White Marsh, Md., is again able to attend to business, after an illness covering many months.

Gus Obermeyer, Parkersburg, W. Va., is recovering from a six weeks' illness of typhoid, and is again attending to business.

Visitors in Columbus, O.: N. J. Wietor, of Wietor Bros., Chicago, who returns with Wm. Graff of this city from a three weeks' Chicago trip.

A new store has opened corner Wabash and Adams streets, Chicago, in which Frank Williams is said to be interested.

NEWS NOTES.

John Pehrson has started in business at 25 East 43d street, Chicago.

John K. Duer has opened a flower and plant shop at 644 Madison avenue, New York.

D'Alcorn & Sons, Portsmouth, Va., have opened a retail store at 412 Crawford street.

The new store of Siebrecht & Son, Broadway and 90th street, New York, is very attractive in its appointments.

It is stated that the Woodland Park Floral Co. has been forced to move from Seattle, Wash., to Puyallup, because of lack of Cedar river water.

Joseph Fuller of Leominster, Mass., has purchased the Stone estate on which are two large greenhouses which will speedily be utilized for his growing business.

Max Schnoor, Aqueduct, N. Y., has been missing from home since February 28. He is described as 5 feet 8 inches tall, dark complexion, hair and moustache, blue eyes.

NEW YORK FLORISTS' CLUB.

Sixty members were present at the March meeting of the club to listen to the practical paper by John Birnie on "The needs of New York as regards a plant market." President Totty presided. An interesting talk was also given by Mr. Weisner of Holland on bulb growing in that country and the popularity of orchids in England. John Scott, who was president in 1906, was presented with a beautiful diamond horseshoe, the presentation speech being made by Alex. Wallace. A motion was made and carried regarding the permanent home of the club, the officers and trustees to devise ways and means for procuring the same. W. F. Sheridan's motion regarding a committee on membership was laid over until the next meeting. The committee on awards who visited the establishment of Ant C. Zvolanek, Bound Brook, N. J., on March 5, for the purpose of examining new sweet peas, offered the following report: To Le Marquis, Mrs. Alexander Wallace, Wm. J. Stewart, Mrs. Wm. Sim, certificates of merit; Helen M. Gould and Mrs. F. J. Dolansky were not in condition to be judged.

Julius Roehrs, Jr., the newly-elected trustee, addressed the meeting, promising to do his duty in the coming year. Jno. Nugent, and his assistants, Messrs. Rickards and Schultz, had a splendid layout of refreshments. Chairman Nugent announced a Ladies Night for the April meeting.

Following is a list of exhibits, with the comments of the committee:

Frank Kramer, Washington, D. C., rose Queen Beatrice, four vases; preliminary certificate.

Malachi Tierney, Highland, N. J., carnation seedling Mrs. Robert Hartshorne; 80 points.

Paul Niehoff, Leighton, Pa., new rose Aurora; preliminary certificate.

E. H. Pye, Nyack, N. Y., Kaiserin roses; cultural certificate.

A. Demcusy, Flatbush, L. I., crimson seedling shown in fine condition; already awarded preliminary certificate.

Maxfield & Dimond, Barrington, R. I., artificial calyx support; vote of thanks.

CLUB AND SOCIETY NOTES.

At the meeting of the Holyoke Horticultural Society (Mass.), March 6, M. L. Graves spoke on the culture of the rose.

The lecture before the American Institute, New York, on Wednesday, March 13, was by G. J. Powell, on "Propagation, Planting and Care of Fruit Trees," with demonstrations of grafting and budding.

The Worcester County Horticultural Society held its first flower show of the season on March 7. Among the exhibitors were George McWilliams, gardener for G. M. Whitin, H. F. A. Lange, E. W. Breed, L. Midgley, W. McAllister, gardener for Mrs. John C. Whitin.

The spring exhibition of the Massachusetts Horticultural Society will be held in Horticultural Hall, Boston, on March 22, 23, 24. The display of spring bulbs and Easter flowering plants promises to eclipse anything previously shown here. The ladies' orchestra will furnish music every evening from 7.30 to 9.30, and Saturday and Sunday afternoons from 3 to 5.

NEWPORT NOTES.

Andrew Christensen, for several years gardener for Miss Fanny Foster on Leroy avenue, has resigned and will take up his residence on Russell avenue in a handsome cottage now nearing completion.

Mr. and Mrs. Arendt Brandt celebrated their silver wedding anniversary last week at their home in Newport. Many relatives and intimate friends gathered to assist in the celebration and to bestow suitable remembrances of the occasion upon the happy and genial couple.

The conference of the Federation of Societies for Rural Progress will be held in Newport March 14 and 15, when speakers of national prominence will take part. It is expected that Prof. Bailey of Cornell will deliver the principal address on matters relating to horticulture.

Messrs. Alexander MacLellan and John T. Allen, who have been quite ill with grip, are rapidly improving.

FIRE RECORD.

The store of Chas. Stahl, 610 East 143d street, New York, was destroyed by fire on March 1.

The greenhouses of Mrs. E. M. Bullock, Elkhart, Ind., were destroyed by fire on February 28. There was no insurance and the loss will be heavy.

J. J. McManmon, Lowell, Mass., suffered from smoke and water incident to a fire in the upper floors of the building in which his stock is located.

The dwelling in which Minder Bros. resided at Cottage Hill, D. C., was destroyed by fire on February 24. Local fire apparatus was of little avail owing to the difficulties in reaching the place. It is understood that the greenhouses were not hurt, and that about \$3,000 insurance was upon the dwelling.

GREENHOUSES BUILDING AND CONTEMPLATED.

New.

Do You Want to Belong to the Dark Ages?

The age when the florists took the materials a firm sold them without a question, built their houses and went on struggling with shade and darkness—or are you in line with the up-to-dater who wants all the light there is and believes in spending money to get it? If you belong to that class you want our Half-Iron Frame House with its metal eave plate and sash bar bracket; iron at every decay point—iron at every point where wood must be heavy and shade casting. It's a house built to stay and it stays—it's the H. & Co. house of economy. If you believe in economy write today—tomorrow you'll be too busy.

HITCHINGS AND CO.

GREENHOUSE DESIGNERS AND BUILDERS.

Manufacturers of Heating and Ventilating Apparatus.

1170 Broadway, NEW YORK.

IT'S THE EVERLASTING DRAG OF THE

repair bills that keeps a man discouraged—the repairs here and there, at the eave line, another post rotted off, the roof sagged and the glass broken, and so on 'til the day of reckoning comes at the end of the year and you find out what a sink hole your house has been. Your day of reckoning comes at the end of the year, but we start with ours—start at the very start to reckon on the life of materials and construction, to figure on the chances of repairs and a way to get around them. That's how we came to make the galvanized, Ice-Clearing Eave Plate and Sash Bar Clasps; the Angle Iron Posts and Cast Iron Foot Pieces—we were after durability and rigidity, and we got them.

We cut off this 6 inch section of Eave Plate to give you an idea just how it is.

You want the house that lasts. Then you want our decay saving materials. We sell them in any quantity desired. Write us.

KILLARNEY

THE FAMOUS IRISH HYBRID TEA ROSE

The Greatest Pink Rose For Forcing Purposes In Existence.

It makes a strong upright bush, with beautiful, deep bronzy green foliage. It is wonderfully free blooming, bearing its large, long, pointed buds and massive flowers on long, stiff, heavy shoots; in color it is an exquisite shade of deep, brilliant, sparkling shell pink; flowers of enormous size, with thick petals of great substance and delightful tea fragrance. It is the greatest pink rose in existence for forcing and finest of all roses for out door culture. It is perfectly hardy, a constant bloomer, and one of the World's great New Roses. We have the largest stock of this variety in America, all on own roots. The demand is great, and stock is moving rapidly. Let us have your order to day.

Price, 2½ inch pot plants, \$6.00 per 100; 3-inch pot plants, \$8.00 per 100; 4-inch pot plants, fine strong two-year-olds, \$25.00 per 100.

We have also in stock upwards of 1000 different varieties of Roses of various sizes, including all the new and popular varieties as well as old stand-bys. Send for

THE NEW
KILLARNEY
ROSE

Commercial Chrysanthemum Culture in France

Visitors to Paris and also to other large towns in France such as Lyons, Marseilles, Bordeaux, etc., during the autumn months must often have noticed in the florists' shops and in the flower markets the extensive way in which the chrysanthemum is exhibited for sale.

In the florists' shops of the better class one notices chiefly the large quantities of big blooms that are arranged in various artistic ways; in the markets it is chiefly pot plants of freely flowered varieties and bunches of cut blooms that can be purchased for a few sous.

The vendors of these are seldom or never the growers. It is a trade exclusively in the hands of those who grow for market or for the florists, many of whom deal directly with the growers. In England our chrysanthemum specialists such as Jones, Davis, Cannell, Wills and others have very fine collections of chrysanthemums in flower all through the season but the blooms are not grown for the purpose of sale but are chiefly for the purpose of exhibiting at the shows by way of advertisement for the sale of plants and cuttings and for the providing of an autumnal display to which their customers are freely invited. It is one of the pleasant features of the chrysanthemum season here to be able to go the round of the trade growers and importers and inspect the novelties at the time of their flowering.

In France, however, this custom is not so general and while in England the visitor can at any reasonable hour during the day time walk into any of our nurseries where the chrysanthemum is grown and inspect the collection it would be practically impossible to do so in a French nursery without a special invitation or permit. I remember on one occasion making a long journey to see a collection in the north of France and when I arrived the proprietor was away from home. All my prayers and entreaties as a visitor from England were of no avail to the man in charge. I had no "authorization" and therefore the thing was impossible.

Paris is perhaps the greatest market for chrysanthemums in France and it is curious that plant dealers and raisers of new seedlings should also grow blooms for supplying the market and the florists. But this is probably explained by the fact that their trade in plants and cuttings is much more limited than that of our growers in England. the small amateur grower in

France being almost a negligible quantity while in England he is a most important factor in the trade chrysanthemum growers' business, so much so that a trade grower will seldom enter into competition for the prizes offered at our shows

with the amateurs who are his best customers.

Ernest Calvat, besides being a large raiser of novelties, is also a big trade grower of cut blooms. They are always immense exhibition flowers cut with stems about 3 feet long and are despatched to Paris and other places in immense numbers. Anatole Cardonnier is another of the well known growers of big blooms for the Paris market, and for all the high-class florists, his despatches beginning about the 8th of September and lasting till about the middle of November. He has a fine establishment at Bailleul in the north of France where he grows other things such as forced fruits, etc., and in every respect his Grapperies der Nord is a model establishment, and worthy of a visit.

In and around Paris the market is principally supplied by two kinds of growers. One class is composed of those little nurserymen who cultivate other things and simply fill up the end of the season by growing chrysanthemums in the open and cutting whatever bloom they get from plants that have had no special attention paid to them. The other class are men who grow big blooms under glass. By this term is meant merely glass shelves, for a proper showhouse such as we understand it is not necessary and probably could not be well afforded.

To an English eye these glass shelves are the queerest constructions in the world. They are dreadfully primitive and when it rains the water pours through the roof soaking the plants, the blooms and the ground beneath. They form a striking contrast to the well built span roofed houses in which our English growers house their plants.

An English grower will generally say he has a house or houses so many feet by so many as the case may be. The French grower reckons his by the number of frames. It is a curious experience to visit one of these places, and an uncomfortable one, too. First of all a number of rough posts are driven into the ground at intervals, cross pieces are then placed on top, sloping so as to make a kind of ridge and furrow; on these are

laid the frames seldom more than six feet high from the ground, occasionally less, which renders it very difficult for a tall man to get about. When it rains there is of course a crack between and around each frame and if the visitor tries to dodge the water that comes through he gets a stream either down the back of his neck or else on his note book. The sides are open, except when it is very cold and then straw mats are used for protection. Sometimes a closed stove is erected to help to keep the temperature up. The pots are partly sunk in the ground. There are no paths properly made and the slop and mud in wet weather ought certainly to rot off the whole collection. It may be, however, that being open at the sides the wind soon dries up the place and this misfortune is thus averted.

Last autumn, when in Paris, I thought I would like to visit one or two of these market growers. My old friend, Aug. Nonin, one of the best hearted, most genial Frenchmen I ever knew, kindly volunteered to pilot me around and invited me to lunch by way of starting the day. Chatillon-sous-Bagneux, where he lives, is a good ride by the electric train towards the south past the fortifications quite into the open country. The residence is a neat little detached villa, rough cast, with stone facings standing just behind an iron railing. Internally everything is neat, tidy and comfortable and we pass a pleasant hour or two with the family before starting on our journey of inspection.

Although this is not the first visit we determine to go around the Nonin collection. This is housed in a manner similar to that already described. The earlies, however, are further off and in the open. M. Nonin's business is more like that of our own growers and a few particulars may be useful. Just now he has 350 novelties on trial. His own collection consisted of 500 varieties grown in 4,000 plants in pots. His earlies number about 200 varieties and it is in this section that he has been chiefly successful of late years. He is not a market grower, although cut blooms are sold on the premises to local purchasers. He is a seedling raiser of novelties and a cultivator of plants and cuttings for amateur and other growers. These are sent all over France; the fewest perhaps go to Brittany, and also to places abroad.

As we wander along we notice many fine specimen blooms, seedlings for 1908, which are on trial. Others that attract attention are some already well known. But some rarer are Mme. de Largentaye, rosy white, Jap; Ami Gautier, mahogany red; Mousse Orientale, a pale golden yellow hairy variety; Dubuisson Foubert, a Jap, color amber buff; Mlle. Jeanne Bois, a fine new white; Douceur Angevine, lilac mauve; Loango, golden bronze; Mme. Henri Delizy, white tinted purple; and very many more of the true show type. Dahlias, carnations, begonias, etc., are also strongly in evidence.

Among decorative chrysanthemums of special merit for outdoor culture we note Tapis d'Or, Menelik, Champ d'Or, Acajon, Flocon de Neige, Orange Pet, etc.

The Value of Bulb Stock

That bulb flowers have really never been appreciated at their full value, I know the reader of this short article will instantly deny. You have in your mind the prominent place that everything in bulb stock has taken, not only in the florists' trade, but also in the private greenhouses of this country during the past few months. Of course for years both private and commercial growers have grown bulb flowers in ever increasing quantities; but when it comes right down to the facts in the case, the private-grower has used his hyacinths, tulips, and narcissi for filling-in purposes—when roses, carnations, violets, and orchids (which I should have mentioned first) were in short supply. It is the same with the commercial florist—he says to his customer, "I have no roses, carnations, or violets, but I have some very good tulips, yes, and some excellent daffodils." What I wish to bring out is this—we have all of us been very prone to look down upon bulb flowers; they are good enough to fill in with, but never have had a seat at the first table. Now I want to ask you a question, and it is simply this: What would the flower trade of America have done without Dutch bulb flower stock, during the past six weeks or so? It is all right to laugh now, but many of our florists, without bulb flowers, would simply have had to stop business in the month preceding the sun's again shining, or in other words, during the last half of January and part of February. I am a great admirer of bulb stock, and as far as I can influence you towards it I am trying to do so. For the splendid way in which this class of flowers carried us through the almost absolutely sunless time from before Christmas until a few short weeks ago, should forever place in the highest estimation everything that goes by the name of Dutch bulbs.

In this connection, a reminding word to call to your attention the yearly increasing sales of Holland bulbs, that season after season are taking place to planters, may not be unappreciated. The past two autumns, especially, has seen such enormous quantities of Dutch bulbs ordered from our seedsmen that towards the end of the seasons, and quite a few weeks before the ground has frozen, for the winter, it has been necessary to return money to customers, with the notification that bulb stocks were exhausted. In comparison with this state of affairs cast your thoughts back with me, say ten, yes, twenty years, and bring to your mind the number and value of Dutch bulbs that were imported by even the largest firms at that time—do you remember the first bulb catalogue? Compare it with those of last autumn. But, I feel that I have already taken up enough valuable space. I am a firm believer in Dutch bulbs, and I am sure all their friends will pardon what may seem perhaps an unwarranted plea in their favor. Sometimes I try to look ahead and wonder if the consumption of bulbs will develop and increase during the next decade as it has during the past—but the problem will answer itself as time goes on, and I think favorably. Dutch bulbs are no longer a side issue—a filler in—but one of the greatest factors in the seed trade of America today.

The Pergola in English Gardens

The pergola, that until a few years ago was associated in the minds of most with a garden in sunny Italy, where the vines that clothe its pillars are laden with luscious grapes in their season and the roses that deck its masonry bloom the winter through, filling the garden with rich color, and lading the soft

breezes with scent, is now an institution in English gardens throughout the length and breadth of the land. In this country, however, the term pergola is applied to structures that in the land which is its home would hardly be tolerated. The possessor of a garden, no matter how small it is, is almost certain, sooner or later, to span a walk with a series of arches of larch or oak or possibly some far less satisfactory sort of wood and immediately upon the conclusion of the work will dub it "pergola."

But how different a thing this is from the Italian pergola with square pillars of solid masonry and a roof of stout oak beams, where the planting is done with a light hand that the beauty of the pergola itself may not be hidden. There are of course some fine examples of the Italian pergola in this country and planted with a proper knowledge of how the work should be done. The accompanying illustration gives an excellent idea of the pergola as it is constructed in most English gardens today. It is, of course, far less expensive when made of wood than when built of stone and when stout poles are used and carefully arranged the pergola, while not such a noble and dignified structure as the word was formerly understood to designate, is infinitely superior to those pieces of arches, sometimes built of flimsy wood, sometimes of iron uprights connected by chains which are frequently to be seen in English gardens. Made of stout posts of larch or oak, and strongly built as shown in the photograph, a pergola will last for years and never looks paltry. There is no doubt that it is in this form that the pergola will be found in most English gardens of the future. The paved path beneath, fringed on either side by a narrow verge of grass, with a border behind this in which lavender, rosemary and other old-fashioned plants are growing, gives an additional charm to the scene. This paved

path offers a splendid opportunity for growing miniature plants in the cracks between the stones, if, as should be the case, the path is laid without the use of cement. The violet cress (*Ionopsidium acaule*) is a charming little annual suitable for this purpose.

In most English gardens the pergola is given up chiefly to the

many beautiful varieties of the rose now to be had, but the one shown in the illustration was planted differently. Some of the handsome large-leaved vines, such as *Vitis Coignetiae* and others, the purple flowered *Clematis Jackmanni* (still in lovely bloom where the vines take on their rich autumnal color), honeysuckle. *Polygonum Baldschuanicum* and other climbing plants were used. Hollyhocks are shown in the border beneath and these stately plants are quite suitable for this position, although not nearly so beautiful as the Madonna lily (*Lilium candidum*) which is a feature beneath the pergolas in some Italian gardens, and makes an exceptionally charming picture.

Harry H. Thomas

MONTH OF GIFTS AND HOPE.

The stormy March is come at last,
With wind, and cloud, and changing skies,
I hear the rushing of the blast
That through the snowy valley flies.

Ah, passing few are they who speak,
Wild, stormy month! in praise of thee!
Yet, though thy winds are loud and bleak,
Thou art a welcome month to me.

For thou to northern lands again
The glad and glorious sun dost bring,
And thou hast join'd the gentle train,
And wear'st the gentle name of Spring.

And in thy reign of blast and storm
Smiles many a long bright sunny day,
When the changed winds are soft and warm,
And heaven puts on the blue of May.

Then sing along the gushing rills,
And the full springs, from frost set free,
That brightly leaping down the hills,
Are just set out to meet the sea.

Thou bring'st the hope of those calm skies,
And that soft time of sunny showers,
When the wide bloom on earth that lies
Seems of a brighter world than ours.

William Cullen Bryant.

Different Forms of *Euonymus radicans*

From time to time the horticultural press has of late made favorable mention of *Euonymus radicans*, and I quite agree with the writers concerning its value. I feel, however, that there is a need among gardeners and others for more precise knowledge concerning the different forms of this plant, and their behavior or development under given conditions. I must admit that I am considerably at sea myself and am looking for further information.

There are at least three distinct, green forms of *Euonymus* any one or all of which a person is liable to get when ordering *Euonymus radicans*, and they can be seen in nurseries, mixed, in one block, the nurseryman himself sometimes not suspecting that there is more than one variety. Following is a partial description of these three forms and the names under which, for want of a better nomenclature, they are sometimes referred to by nurserymen and gardeners.

(a) The "small-leaved" variety. The leaves of this variety are about an inch long and about half an inch wide, and very short stemmed. The veins are conspicuously white. When growing free, that is without anything to climb on, its shoots come together in characteristic pyramidal bundles bracing each other up back to back as it were. In this state I have never seen it more than two or three feet high. Climbing on a wall, chimney, etc., it attains a much greater height, and also, it is said, changes in appearance and character quite remarkably and produces the next described variety. For some time I was inclined to doubt statements to this effect, but recent observations have led me to believe that frequently, if not usually, the above described transformation actually does take place. However, I cannot remember ever having seen a plant which had nothing to climb on change, and I am also quite sure that I have seen old climbing plants which did not change. Until the change takes place this variety clings very closely to what it climbs on, almost as though the leaves were individually pasted down, and in the winter has a rather dingy gray green disappointing effect. It fruits sparingly if at all. To my mind it is the poorest of all the three forms, and comparatively worthless.

(b) The "pointed-leaved" variety. The leaves of this variety including the long petioles are, on well developed shoots, of an average length of two and one-half to three inches, and of an average width of one inch, or slightly more, and taper to a point at each end. At the lower end this point gradually merges into the petiole. In the case of the "small-leaved" variety on the other hand the leaves are comparatively blunt at the apex and broadly rounded at the base (ovate) and there is not that gradual transition from leaf blade to petiole. The leaves of the "pointed-leaved" variety are very glossy. When growing without an object to climb on its shoots

do not gather into bundles as described above but spread outward and slightly upward after the manner of the ground juniper (*Juniperus communis*). Used in this way it makes a good ground cover and is an excellent substitute in shady places, and also in open situations, for such a plant as *Taxus canadensis*, being much easier to establish and growing much faster than the latter. One plant will sometimes cover an area ten feet or more in diameter. It is useful in large rockeries. In such cases it should preferably be planted where the roots can find their way into good, fairly deep soil, rather than in a location where the roots would be subjected to summer drought. Climbing, this variety does not have the pasted down appearance of the foregoing described variety, but sends out shoots a foot or more in length free from support. These shoots add to the grace of the vine and yet do not make it look ragged and unkempt. Sometimes these shoots are sheared back closely without detriment to the health of the plant. Ordinarily I do not like to see this, as the appearance, then, is very much like that of the "small-leaved" variety. It is this variety which is so desirable a substitute for English ivy, and while it is quite true that frequently it is eventually produced by the "small-leaved" variety in the course of years, there seems to be no good reason to wait for such a lengthy process but that the start should be made at the time of planting by using only such plants as have been propagated by cuttings taken from this variety itself. I think this is the variety referred to in Bailey's *Encyclopaedia* under the name of *Euonymus radicans* var. *Carrieri*. Both the foregoing and this variety produce variegated leaves occasionally. The variegations of the former are apt to be green leaves margined with white and constant; the variegations of the latter are usually irregular blotches of very light yellow, and variable. It produces

considerable fruit but not as much as the next described variety.

(c) The "round leaved" variety. The leaves of this variety including the comparatively short petioles are, on well developed shoots, not stunted by fruiting, about two and one quarter inches long, and about one and a third inches wide, and are oblong in shape; not particularly "round-leaved." In general appearance it is more like the "pointed-leaved" variety than like the "small-leaved" variety. At times it does not seem to cling any too well. It is of rather open habit. It bears fruit abundantly, which is very conspicuous and decorative in winter; even at this time of writing, the end of Febru-

ary. The seed of any of these forms is said to produce plants of the small-leaved type. At one time botanists talked of classifying all these forms with the species *Japonicus*.

Should you find space in your columns for this communication I hope that some of your correspondents who have had experience with this plant will be able to show further light on the subject.

Chas. J. Kochler

Ornamental Conifers

The trees we went over in recent articles belong to the *Abietineæ* tribe of the *Coniferae* family. Next in order come *Taxodineæ* and *Araucarineæ*, two tribes in which are found the most curious and also the most gigantic trees among the conifers. Unfortunately most of them are not hardy in our northeastern states. One of the most interesting is the Japanese umbrella pine, *Sciadopitys verticillata* which looks quite different from any other conifer in its habit of growing, and in the circular arrangement of its long glossy needles. It is a very hardy tree and very useful for outside decoration; big specimens can not be seen in this country as it is relatively of recent introduction but is growing to a nice compact pyramidal tree. In Japan it is said the old trees sometimes are one hundred feet high, when they lose their lower branches, retaining fir like pyramidal form on top of a straight trunk and can be seen from afar looming up over the surrounding trees.

Taxodium distichum, the southern swamp cypress, is a very useful timber as well as ornamental tree. The young trees are generally pyramidal in form and grow to a great height before they spread out their branches. The leaves, which are deciduous, are very finely divided in the shape of a mimosa leaf of a light green color. This can be grown anywhere but its natural place is the edge of a brook or lake. There they produce, when old enough, what are called "knees" which are very interesting, ovate formed, excrescences from the roots, which in their natural state grow sometimes two feet above the ground. In cultivation they are much smaller, and generally make a border to the edge of the water. There are a few natural forms in cultivation; the most distinct is *T. d. pendula*, a small tree of drooping habit.

Glyptostrobus (*Taxodium*) *heterophylla* is a little Chinese tree, not quite as hardy as the bald cypress. The young shoots sometimes freeze back. It has the same habit of growth, with smaller leaf.

Cryptomeria japonica. The long pendulous shoots thickly clothed with short needles make this look a very attractive tree. In general aspect some of the

cryptomeria are not unlike *Wellingtonia*, the "big tree" of California. The shoots are coarser and the branches more apart. In Japan it grows to a big tree of pyramidal outlines. It likes a good deep soil and substantial shelter against north wind, for it is quite tender and will not grow everywhere. There are some very interesting forms imported from Japan; some are dwarfer than the type, with long twisted or pendulous shoots; some grow very compact with short needles and others have the young shoots colored white, making a beautiful effect, but they are all tender. *C. j. Lobbi* (*viridis*) which is of European origin is the hardiest and looks much like the type with thinner shoots of a light green color. *C. j. elegans*, one of the nicest, is not hardy.

Sequoia sempervirens and *S. (Wellingtonia) gigantea*, the big tree of California, can only be mentioned here as belonging to that tribe; we are not fortunate enough to grow these wonders of the vegetable kingdom in New England; we lost all those we had.

Athrotaxis, *lycopodium*-looking little trees from the mountains of Tasmania, have to be mentioned here also as not hardy.

Araucaria imbricata from the Andes of Peru and Chili is the only one of that genus which can be grown in temperate countries, but I do not think farther north than Washington. What a curious and beautiful tree it makes in England and Ireland. We have to give it up. We have one about 15 feet high, but have to build a frame house over it in winter. About the same kind of a tree in appearance is the following.

Cunninghamia sinensis, also called *Pinus lanceolata*, from China. A little while ago *Park and Cemetery* spoke of some specimens in Delaware and Alabama but we cannot grow them.

A patriotic act

Among the wise and patriotic acts of President Roosevelt none are more to his credit or more to the best interests of the country than his recent proclamation, creating 17,000,000 acres of additional forest reserves. The narrow-minded, unexcusable truculency of certain senators in the interest of land grabbers and lumber syndicates has been checkmated and the President's action will have the hearty approval of all good citizens.

Our friends the wholesale florists

Again we have the pleasure of directing attention to the enterprising spirit so well displayed by our cut flower advertisers in our Easter number. No department of commercial horticulture calls for greater business sagacity and it is not surprising that the ranks of the commission flower dealers have furnished some of the most eminent leaders in club and society work. We commend them with confidence to all in need of flower material for the great spring floral event which we sincerely hope will fully compensate in volume for the disappointing season just experienced.

Easter greeting

HORTICULTURE extends herewith an Easter greeting to its readers. May the spring time now dawning after a winter which in many sections of our country will be long remembered as the severest ever experienced bring to all a volume of business also unprecedented and in all departments of this—the most excellent of man's industries, may fresh enthusiasm, broader vision and greater efficiency prevail. As usual HORTICULTURE's advertising pages present the offers of the most advanced houses in all horticultural lines—those firms which seek to do business with the intelligent and progressive people to whom HORTICULTURE distinctly appeals. We bespeak for these advertisers the patronage which they so well merit.

The national flower show project

The announcement by the chairman of the committee of fifty that he has secured over nine thousand dollars toward the required ten thousand dollar guarantee fund should dissipate all doubt that might have existed as to the certainty of the proposed national flower show at Chicago. This happy realization is indisputably due to the indomitable persistence of chairman Kasting who assumed the arduous undertaking at a time when the first flush of impetuous enthusiasm had worn off and the project had come to a standstill for lack of courageous leadership. The American Rose Society's exhibition now scheduled for Chicago in the spring of 1908 will be a good forerunner and appetizer for the greater affair of the succeeding fall or spring.

The rose society's wise policy

The American Rose Society has good reason to feel proud of its Washington meeting and exhibition. Some disappointment was expressed that the latter was inferior to the display made in Boston last year but attendant circumstances and environment should be considered and, taken all in all, Washington's achievement was most praiseworthy. The result should be extremely gratifying to the officials of

the American Rose Society and to Mr. Bisset and his assistants in the local work, all of whom labored so assiduously on behalf of their respective societies and for the comfort and pleasure of their visitors. The sentiment in favor of professional control of the activities of the American Rose Society is very reassuring and cannot fail to attract to the ranks the increasing support of an element whose loyalty has been well tested in other similar bodies, without whose support both Boston and Washington would have been fatally handicapped. At this juncture the decision to go to Chicago with the next meeting was eminently wise as results will amply demonstrate in due time. We hope that the western rose growers will make a vigorous start at once, cheer and encourage the hard working officials of the society by assuming membership now and taking the preliminary steps to assure an exhibition of unprecedented magnificence at Chicago next spring.

The Tulip Disease and its Treatment

During the last three years some extensive trials have been made on the bulb farm of Messrs. Polman & Mooy, of Haarlem, Holland, with a view to discovering a remedy for tulip disease. These experiences have been based on the researches of Prof. Dr. H. Klebhan of Hamburg, who discovered that the destruction was caused by two distinct forms of fungi—viz.: *Botrytis parasitica* and *Sclerotium tuliparum*. The disease caused by the former shows itself in the spring by the non-appearance or the weakened appearance of the first tulip sprouts. Upon lifting the bulbs there are seen numerous small black fungi, about the size of a pin-head. In the case of *Sclerotium tuliparium* larger dark brown fungi are discovered adhering to the old bulb. The use of disinfectants has had the effect of making the ground unfit for bulb cultivation for some years. The only effectual remedy is to lift out any of the bulbs which show signs of the disease, together with the surrounding soil, and at the earliest possible moment in the spring time ensuing that these are destroyed by burning. It is necessary to cleanse the soil to prevent the disease spreading. The fungi, it has been found, will retain their vitality for at least two years in the ground, and in some places the ground has become so badly infected that it is impossible to cultivate bulbs. This shows the necessity of prompt action being taken at the first indication of the disease on the bulb farm.

W. H. A.

Our Way

to make our publication valuable to the advertising dealers in every branch of the profession is to provide such reading matter as will secure the attention and consideration of the thinking, progressive men who are buyers of first-class material and are able to pay for such.

If you have anything to offer to that class of buyers you can find no medium equal to **HORTICULTURE** for the purpose. Our advertising pages show business houses universally known as leaders in American horticultural enterprise, who have used these columns constantly for the past two years.

They Know Why!

British Horticulture

CAMELLIA CULTURE

In recent years the Camellia in this country has declined in popularity, owing to the rivalry of other blooms. Public taste is very fickle in these matters of floral fashions. Market florists have certainly felt the change in fashion, for the demand and prices are smaller now than was the case some years ago. The largest trade collection of the camellia is to be found at the Royal Nurseries, Waltham Cross, belonging to Messrs. Wm. Paul & Son, who are also famous as rosarians. The newer addition to their collection includes Beauty of Waltham, of a flesh-colored tint, with five petals and shapely form. This has been awarded three first-class certificates and an award of merit. Duchess of Teck is of a bright, satiny rose pink with faint red veins along the margins of the segments. The best of the bunch is undoubtedly Pride of Waltham; the bold blooms are of a pure soft tint. The Duchess is of a rich, rosy-pink color, the centres being shaded with salmon. One charm of the camellia here is its hardiness. At the old gardens at Chiswick belonging to the Royal Horticultural Society there was a collection in the open air which flourished. These were grown in bush form, came as high as 12 feet, behind a wall and facing the north.

GARDENERS' COMMISSION

In the past the custom has largely prevailed of the British nurserymen and seedsmen giving a bonus or commission to gardeners, based on the amount of the order received from the employer. This custom lent itself to considerable abuse by unscrupulous persons, but as the gardeners expected this gift firms who desired to secure custom had no other alternative than to follow the lead of their competitors. The new Act of Parliament prohibiting the payment of these commissions was passed with the object of preventing dishonesty amongst employes, and for the purpose of raising the standard of commercial morality. The members of the Horticultural Trades' Association of Great Britain, comprising the leading nursery and seed houses, are now pledged not to pay secret commissions of any kind. Their efforts to promote a better form of trading, however, is somewhat hampered by the action of certain continental firms, who in defiance of the new enactment are offering commissions to gardeners. The Association have issued a warning to the employes not to accept the illegal offer. Gardeners who as a body are not too well paid, are disappointed at the loss of these annual presents. There is also some dissatisfaction amongst the purchasers that although the trade are saving the commissions they are making no reduction in the price of their wares.

W. H. Adsett.

NEWS OF THE CLUBS AND SOCIETIES

GARDENERS' AND FLORISTS' CLUB OF BOSTON.

Carnations furnished the theme for consideration at the March meeting of this club which took place on Tuesday evening, 19th inst. There were on exhibition vases of superb flowers among which the following may be named as excellent. Scarlet seedling 405 from E. A. Wood; this fine variety was described recently in these columns. Evangeline, Beacon and Alma Ward from Peter Fisher, Afterglow from Wm. Nicholson, White Enchantress and Winsor from F. R. Pierson Co., vase of seedlings from H. A. Stevens Co., Bay State from A. Roper. This grand novelty attracted much attention. In addition there were Scarlet Conical radish and lettuce from W. W. Rawson & Co., the lettuce having been grown under electricity. A large collection of Zvolanek's winter-flowering sweet peas from William Sim. Vase of handsome annual larkspurs from W. N. Craig. Each exhibitor was called upon to make remarks upon his respective exhibit. Speaking of Winsor Mr. Pierson said that this variety had proved distinctively a success as a commercial variety and he was sure it would give very general satisfaction as a standard carnation for rough and ready culture. Buyers, he had noticed, were getting discriminative and looked for good all around qualities rather than just for size. He spoke well of Melody as a market grower.

Mr. Fuld described briefly the method of introducing electricity into the lettuce beds at Rawson's; copper plates 3 ft. by 18 in., buried in the soil receive the current from feed wires at each end of the bed and the electricity passes from one to the other through the entire length, the result being an average gain of three or four days in growth. D. Iliffe showed a revolving plant stand which he is placing on the market.

F. E. Palmer led in the carnation discussion. He proposed Field Culture vs. Indoor Culture as the first topic. He advocated the former because of the abundant food, fresh air, etc., available for the young plants. Peter Fisher took a middle ground, that circumstances and the man have much to do with results in either case and the only way to decide as to merits is to test both methods. The question of space is most important in indoor culture, otherwise indoor culture would be more generally followed because of the precarious weather conditions that field stock must often face. Mr. Pierson held similar views but mentioned the fact that roomy houses, well-ventilated, are essential for indoor culture. Mr. Stevens thought much depended upon the variety under culture.

The Most Important Point at which Breeders Should Aim was the next topic. Mr. Sander's ideal was better flower and shorter stem. Mr. Stewart, appealed for fragrance and Mr. Craig coincided. The Relative Value of High Grade Flowers was also dis-

cussed; Mr. Palmer recommended that breeders give more attention to commercial qualities. Mr. Patten believed that there would always be a call for both high grade and low grade blooms. This topic brought out considerable discussion on the relative value of awards as made by the American Carnation Society upon the basis of exhibition blooms. It was the consensus of opinion that the plan of placing stock of new varieties in various localities for test should be more generally followed and that first class certificates should be given with great caution and only after extended trial. Mr. Pierson said that the main reason new varieties sometimes fall down after introduction is because they had not been submitted to sufficiently critical tests at the outset. Also that introducers should proceed cautiously in order to establish confidence in whatever might be offered under their name.

Mr. Farquhar addressed the meeting on the general summary enlarging upon the desirability of providing some central and universally recognized body to pass upon and give its stamp of approval to meritorious products, a body with which all local clubs and societies should affiliate and expressed his opinion that events are so shaping themselves that the Society of American Florists will ultimately assume a broader field than heretofore and furnish the desired central authority whose seal of approval will carry to prestige the world over, any horticultural product to which it is given.

President Wm. J. Stewart of the S. A. F., being called upon expressed similar views to those of Mr. Farquhar and emphasized as the need of the hour a closer affiliation of all horticultural organizations, using as an illustration action taken by the S. A. F. last week in appealing to the U. S. Interstate Commerce Commission on behalf of New Jersey growers suffering from oppressive express charges.
